

Training Manual

**Air Traffic Safety Electronic Personnel
ATSEP**

**First Edition
October 10, 2003**

Intentionally left blank

Foreword

In 2000, at the 30th Assembly of the International Federation of Air Traffic Safety Electronic Association (IFATSEA) in Montreal, the Air Navigation Commission of ICAO noted that personnel involved in the maintenance and installation of CNS/ATM systems were trained to various standards. This technical personnel group is internationally recognized as the Air Traffic Safety Electronic Personnel (ATSEP). Some States had implemented a comprehensive program of training, certification and licensing while other States were still looking for appropriate guidance with a view to implement such programs. There was, at that time, a lack of universally established principles to govern the exercise of that profession. For this reason, ICAO provided resources and expertise to support a group of experts in the establishment of a document that would address the training requirements for Air Traffic Safety Electronic Personnel (ATSEP).

Annex 10 - Aeronautical Telecommunications- and Document 8071 – *Manual of Radio Navigation* - both give standards, recommended practices and guidance on the operation and maintenance of CNS/ATM systems as well as the training required for these systems. This manual is intended to give detailed information on the training and expertise required for personnel involved in these activities.

However, the constant evolution of the CNS/ATM technology brings new challenges to Air Navigation. Training requirements have to be adapted regularly. This is why the Training Manual has been developed to be generic, as much as possible. This allows the flexibility needed to address future systems/equipment.

Air Navigation systems are now implemented and operated globally. Aviation going beyond geographical boundaries, it is imperative that ATSEP be trained to international standards. Their recognized competency will enhance the aviation safety. ATSEP are a very important link in the aviation safety chain.

This manual was developed by an international group of ATSEP experts, under the supervision of ICAO. The IFATSEA would like to acknowledge the special contribution received from EUROCONTROL for their Guidelines for a Common Qualification Level of Technical Training for Air Traffic Safety Electronics Personnel, and the contribution received from states, international organisations and individual experts who have provided support, advice and input for this manual.

Appendixes

Appendix A – List of Verbs	A-1
Appendix B – Glossary	B-1

Definitions

- Air Traffic Management: The aggregation of ground based (comprising variously ATS, ASM, ATFM) and airborne functions required to ensure the safe and efficient movement of aircraft during all appropriate phases of operations.
- Approved training: Training carried out under special curricula and supervision approved by a contracting State.
- ATM Services Personnel: Persons assigned to perform duties directly in connection with the provision of Air Traffic Management Services.
- Attitude: Attitude is understood as behaviours that are acceptable or not in a given context... Attitudes are taught to reflect the values and beliefs that students should hold to behave in an acceptable way.
- Basic Training: Fundamental knowledge and skills appropriate to the discipline to be pursued in the ATS environment.
- Certification: the action of confirming that CNS/ATM systems/equipment are operated within pre-defined operating limits, standards or manufacturers specifications.
- Competency: The combination of cognitive, attitudinal, cultural and manipulative skills.
- Domain: is a set of elements of a discipline that are studied in the qualification training.
- Equipment: Portion of a system that performs a function that contributes to a systems output(s).
- Intermediate Objectives: What a trainee is expected to accomplish in terms of skills, knowledge and attitude, at specified points in a training course. For example, be able to use a piece of test equipment, or solder a joint. Sometimes also referred to as enabling objectives, as they lead up to, or enable, a specific terminal objective.
- Job Performance Objectives: The desired level of job performance in terms of tasks to be performed and standards to be achieved.
- Knowledge: A person's range of information, familiarity gained by experience or repetition, understanding. Knowledge is understood as storage of information in the student's mind that can be retrieved when necessary, and understanding of concepts and performances.
- Level of complexity: Refers to the taxonomy of verbs used.
- License: The expression "License" is used in ICAO Annex 1 and has the same meaning as the expressions "certificate of competency and license", "license or certificate" and "license" used in the Convention on International Civil Aviation.
- Licensing Authority: The authority designated by a contracting state responsible for the licensing of personnel.
- Qualification Training: Job category related knowledge and skills appropriate to the discipline to be pursued in the ATS environment.
- Rated ATSEP: An ATSEP holding a license and valid ratings appropriate to the privileges to be exercised.
- Rating: An authorisation entered on or associated with a license and forming part thereof, stating special conditions, privileges or limitations pertaining to such license.
- Service: A function and/or data critical to the system/user, provided directly or indirectly, either individually, or as part of an overall function or output.
- Skill: practical or intellectual ability, ease in doing something, dexterity. Skills are classified as either intellectual or physical. Intellectual skills are those related to the use of intellect, like the abilities of classifying, rule-using, discriminating, problem-solving or cognitive strategy (the most complex of all). Physical skills are those that enable a person to make coordinated movements, perform manual tasks, and carry out physical activities.
- System: One or more types of electronic equipment and ancillary devices functioning to provide a service.
- Terminal Objectives: What a trainee is expected to accomplish upon completion of training. For example, "when the trainee completes training, he will be able to troubleshoot and repair a piece of XYZ equipment in 20 minutes, using standard tools and test equipment." (Objectives are best stated in terms of accomplishments.) Also called end-of-course performance objectives or behavioural objectives.

Definitions

- Trainair: Co-operative program in which participating Civil Aviation Training Centres (CATC) have an opportunity to improve the quality and effectiveness of their national training programs, through the sharing of resources and experiences.
- Type Rating: System / Equipment related knowledge and skills leading to recognised competency.

Chapter 1

Training Principles

1.1 Regulatory Requirements

1.1.1

Paragraph 2.7 of Annex 10 - *Ground and flight testing of Radio navigation aid*, and Document 8071 paragraph 1.12.7 *Personnel training and qualification*, as well as ICAO State letter AN 7/5-01/52 Paragraph 9, requires that Contracting States or the organisation authorized by the State authority providing CNS/ATM services, should establish methods for determining job competencies. All personnel directly engaged with maintenance and installation activities of CNS/ATM systems should be qualified for their job functions. The ICAO recognized terminology for personnel involved in maintenance and installation of CNS/ATM system is Air Traffic Safety Electronic Personnel (ATSEP).

1.1.2

The requirements with respect to age, knowledge, experience, skill, and attitude for the ATSEP competency should be in accordance with State Regulatory requirements. However, Chapter 4 of ICAO Annex 1 Personnel Licensing contains standards for other personnel. States should use these references in making their requirements.

1.1.3

The successful application of regulations concerning the safety and regularity of CNS/ATM systems operation and the achievement of regulatory objectives are greatly dependent on the appreciation by all individuals concerned of the risks involved, and a detailed understanding of the regulations. This can only be achieved by properly planned and maintained basic, qualification and recurrent training programs for all persons involved in CNS/ATM systems operations. ATSEP plays a significant role in the safe operation of CNS/ATM systems, and international regulations require that they be appropriately trained.

1.2 Training Requirements

1.2.1 Principal Duties

1.2.1.1

The principal duties of the ATSEP are:

- a) Performing maintenance on CNS/ATM system/equipment which include:
 - Calibrating flight and ground radio navigation aids;
 - Certification of CNS/ATM system/equipment;
 - Modification of operational CNS/ATM equipment;
 - Corrective maintenance;
 - Preventive maintenance.
- b) Performing installation of CNS/ATM system/equipment.
- c) Management, monitoring and control of operational CNS/ATM system/equipment.

- d) Developing, reviewing and modifying CNS/ATM system/Equipment, and/or maintenance procedures and standards.

1.2.1.2

ATSEP work on a large variety of CNS/ATM systems and equipment, which requires a wide range of expertise. Training will be directed toward the specific work requirement assigned to a specific group or categories of ATSEP. The Phase One Basic Training course is all the prerequisite knowledge needed in order to prepare the ATSEP for the next phase of training, Phase Two Qualification Training. The knowledge, skills and attitude gained in the Phase Two Qualification Training such as Communication, NavAids, Surveillance and Data Processing are needed for the next level of training, the Type Rating Training. This phase of training is specific to the equipment or system. This phase is followed by the Continuation Training which has close links to the Type Rating Training since it includes refresher training, upgrade training, training caused by a major hardware/software/maintenance philosophy modification to an equipment or a system. Developmental Training is the last training phase, and it is needed when there is a major change in the ATSEP's job profile, for example, an ATSEP who wants to become a flight check inspector; training instructor; or an installation technologist.

The training objectives in the Phase One Basic Training are related to general duty: the design, installation, operation, maintenance and repair of air traffic control and air navigation systems. The training objectives in the Phase Two Qualification Training will be related to the specific tasks of the job duties.

1.2.1.3

To undertake the duties and responsibilities described above, an ATSEP must be appropriately trained in all the subjects required to ensure that every link of the safety chain is solid. As a technical specialist, an ATSEP needs to demonstrate a high level of responsibility, the ability to think clearly and rapidly, and to accomplish their duties carefully. The training of ATSEP should invariably include several stages of selection in order to eliminate trainees lacking the necessary qualities.

1.2.1.4

The following are some of the duties that normally govern the day-to-day practical work of the ATSEP. The degree of responsibility given to them varies from state to state, and from ANS provider to ANS provider. It varies from the complex level, where the ATSEP is almost considered the brain of the ANS, to a position of limited importance. In the former case, he is normally required to be licensed, or proved to be trained and competent to certify CNS/ATM systems/equipment. In the latter case, his duties may be limited to clerical assistance only. Due to extensive implementation of technologies, there is a marked tendency for states and ANS providers to make increased use of ATSEP, giving them extensive duties and responsibilities.

- Carrying out technical duties related to developmental work concerning the electromechanical, electronic and computerized equipment of air navigation systems, and testing prototypes;
- Providing technical support in the design and layout of specific interface circuitry for air navigation and aircraft detection tracking systems;
- Preparing and contributing to cost estimates, technical and training specifications for air traffic control and safety equipment;
- Providing or assisting with the technical supervision of construction, installation and operation of ground-based air navigation equipment;
- Ensuring that system/equipment standards and specifications are met;

- Applying the knowledge and skills of air traffic safety engineering principles and practices , in order to identify and solve problems arising in the course of their work;
- Modifying CNS/ATM systems/equipment in order to improve capability, reliability and integrity, or to facilitate air traffic control procedures and airspace designation;
- Developing, modifying and debugging system software.
- Controlling and monitoring CNS/ATM equipment;
- Calibrating ground-based air navigation system/equipment to ensure maximum accuracy, and safety of flight, take-off and landing operations;
- Certifying CNS/ATM systems/equipment.
- Providing technical training.

1.2.2 Minimum Qualifications

1.2.2.1

This manual identifies the minimum requirements for an ATSEP to qualify for a license or certification of competency. Not all states have licensing or certification programs. ICAO Annex 1 does not provide guidance on the qualifications required to be engaged in an ATSEP position, however, generally the accepted level of school training is:

- A minimum educational level of successful completion of high school; and
- A minimum of 1600 hrs of post secondary, college or military education, specialized in electronic technology;
- A minimum of 20 years of age.

1.2.3 ATSEP Training Concept

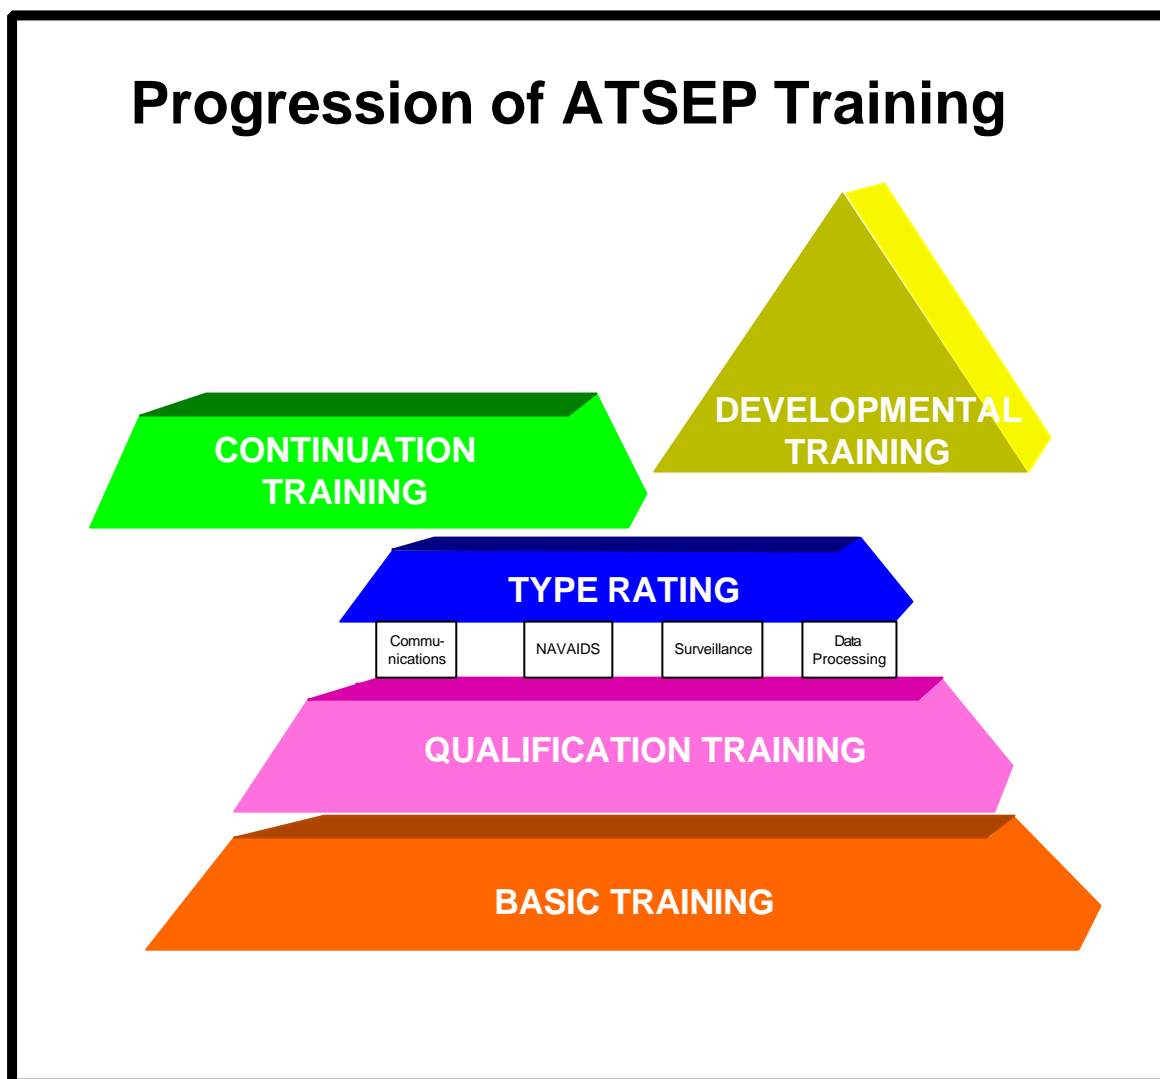

Figure 1: Progression of ATSEP Training

1.2.3.1

In order to cover the various backgrounds of trainees and to ensure training standardisation worldwide, it is recommended that training be divided into multiple phases as follows:

Basic Training

Fundamental knowledge and skills appropriate to the discipline to be pursued in the CNS/ATM environment.

Qualification Training

Job category related knowledge and skills appropriate to the discipline to be pursued in the CNS/ATM environment. Four disciplines have been identified through the four corresponding qualifications: Communication, Navigation, Surveillance and Data Processing.

Type Rating

Equipment/System related knowledge and skills leading to recognised competency.
It also includes the **On-the-Job Training (OJT)**, which is the practical integration of previously acquired knowledge and skills, under the supervision of a qualified On-the-Job-Training Instructor (OJTI), in an operational environment.

Continuation Training

Training given to personnel, designed to augment existing knowledge and skills and/or to prepare for new technologies. It includes refresher, emergency and conversion training. Refresher and emergency training are sometimes named 'recurrent training'.

Refresher Training

Refresher training is designed to review, reinforce or upgrade existing knowledge and skills, including team skills.

Emergency Training

Emergency training includes training in emergencies, unusual situations and in degraded systems. Most of this training will be site specific, or may make use of incidents or accidents analysis:

Emergency

A serious, unexpected, and often dangerous situation, requiring immediate action.

Unusual situation

A set of circumstances which are neither habitually nor commonly experienced. The essential difference with an emergency is that the element of danger or serious risk is not necessarily present in an unusual situation.

Degraded Systems

Unusual situations which are the result of a system failure or malfunction.

Conversion Training

Training designed to provide knowledge and skills appropriate to a change in either job category (new discipline or new type rating), environment (new procedures) or system (system upgrade or change).

Developmental Training

Training designed to provide additional knowledge and skills demanded by a change in the job profile e.g. Flight Check Inspector, System Monitoring and Control, Training Instructor, Installation/Engineering Technologist, or any other career development.

Initial training consists of:

- Phase One Basic Training ensures that a trainee has the necessary background to proceed with the second phase of the training.
- Phase Two Qualification Training consists of one or more training modules. The training is oriented to the position description requirement of the ATSEP within the state organisations, or organisations with delegated authority.

Initial training is followed by components of phase three specific training:

- Phase Three Training focuses on specific areas of training or on specific ATSEP functions. It includes Type Rating, Continuation and Developmental Training.

1.2.3.2

States and organisations with delegated authority may select their ATSEP from personnel who have various forms of aviation experience. However, experience has shown in many states that ATSEP do not have a basic knowledge of the operational environment and safety related aspects of civil aviation. Therefore, it is the role of the Phase One Basic Training to cover the operational and the technical environment related to the ATSEP duties, and all the safety aspects of civil aviation. Phase One Basic Training is a pre-requisite to the Phase Two Qualification Training.

1.2.3.3

Trainees who do not have previous aviation experience will have to undergo the complete training program as recommended in Phase One Basic Training. Trainees who have had suitable aviation experience may not need to undertake this complete program. For example, a pilot, flight navigator, air traffic controller, or a flight radio operator can be assumed to have at least partially completed Phase One Basic Training if they have been actively employed in these occupations within the past few years. In such cases, training institutes, with the approval of the state authorities, are encouraged to apply the necessary flexibility in arranging appropriate training courses, emphasising subjects of particular concern to ATSEP duties. The same flexibility can also be applied during continuation or recurrent training. Table 1-1 provides a listing of the subjects contained in Phase One Basic Training and Table 1-2 provides a listing of the subjects contained in Phase Two Qualification Training.

1.2.3.4

In using the curriculum recommended in the following chapters, local considerations may dictate the advisability of changing the sequence of the subjects. However, the relative importance accorded to each subject should, as much as possible, remain unchanged. The multiplicity of types of CNS/ATM systems/equipment and operational practices throughout the world makes it undesirable to define too rigidly many of the headings of the syllabus, and it is necessary to leave some flexibility to those in charge of the training course. Instructors must, however, ensure that all items in the training manual syllabus are adequately covered and any requirements relevant to individual authorities should be treated as additional subjects, and not as substitutions for the syllabus recommended in this manual. Instructors must also ensure that all items required in their state's licensing or certification program are adequately covered. Any choices in the examination itself should be confined to the additional subjects dealing with those

practices and procedures which the trainee is most likely to use in the first period of his duties as an ATSEP.

1.2.4 Standard of Accomplishment

1.2.4.1

Each training objective in this manual is described with reference to the establishment of conditions, performance and a standard of accomplishment. The conditions describe the scenario where trainee performance will be developed and tested while indicating whether actual equipment, mock-ups, or simulators, etc., are to be used. The standard of accomplishment establishes the level of trainee performance that must be attained, and may differ from school to school, depending on the training equipment available.

1.2.4.2

In measuring the standard of accomplishment, the use of only two grades, *pass* or *fail*, is recommended. It must however be noted, that many training establishments prefer to use a numerical grading system, as trainees strive harder and learn more when rewards increase. If the same grade, *pass*, is given for an 80 per cent score, trainees may strive for perfection.

1.2.4.3

Tests to assess the trainee achievement in performing the training objective should be valid and reliable. Validity of a test refers to the extent to which a test is an appropriate measure of what it was intended to measure. The validity of a test can be ascertained by checking that the conditions, performance and standards of the test correspond to those described in the training objective. Reliability is the ability of a test to consistently reproduce similar results when administered on similar groups of students under similar conditions with different instructors/assessors. To ensure that the test is reliable, the score key, providing model answers and specific instructions on how the test should be administered, is critical.

Examination Data Base

Where possible, states/ANSP should build an examination database, or at least a comprehensive written list, of all need-to-know questions and performance exercises for each rating (charts may be included), covering both general and critical objectives. Due to the quick evolution of technology and systems, these questions and performance exercises must be kept up-to-date to ensure the currency of ATSEPs' knowledge and skills.

A model answer should give the instructor enough information to establish how closely the trainee masters the tested performance. These three elements, score key, model answer and the conditions in which the test has been administered, provide the basis to determine a pass or fail in a consistent manner.

1.2.5 Training Reference Guide

1.2.5.1

Table 1.1 presents the various subjects that need to be covered during Phase One Basic Training. It is recommended that Phase One Basic Training be fully completed before proceeding with Phase Two Qualification Training. The training duration for the various subjects in Phase One Basic Training will vary depending on the size and complexity of the Organisations, the CNS/ATM systems and the ATC/Airspace structure of the state. The training organisation should ensure that all sections of the syllabus are adequately covered to meet the desired level of knowledge before proceeding with Phase Two Qualification Training. The Table 1.1 below is a minimum requirement. Phase One Basic Training could be expanded based on the requirement of each particular state.

1.2.5.2

In addition, the various parts of the training manual have been marked with a coding level from 0 to 5, indicating the degree of expertise to clarify the understanding of a desired level of accomplishment.

The level of complexity refers to the taxonomy of verbs used (a list of these verbs can be found in Appendix A), and can be explained as follows:

- Level 0:** Denotes a simple level of awareness.
- Level 1:** Denotes a basic knowledge of the subject, and the ability to state or list the essential points. Trainees should have a basic understanding of the subject, but are not expected to apply that knowledge.
- Level 2:** Denotes knowledge of the subject, and the ability to apply it in practice, with the help of reference manuals and instructions.
- Level 3:** Denotes a thorough knowledge of the subject, and the ability to apply it with speed and accuracy.
- Level 4:** Denotes extensive knowledge of the subject, and the ability to apply procedures derived from it, with judgement appropriate to the circumstances.
- Level 5:** Denotes ability to analyse a new situation in order to elaborate and apply one or more relevant strategies to solve a complex problem. The defining feature is that the situation is qualitatively different to those previously met, requiring judgement and evaluation of options.

1.2.5.3

As mentioned earlier, there was no training duration identified for the various subjects in each of the training phases. The duration for each phase will vary depending on the size and complexity of the organisations, the CNS/ATM systems and the ATC/airspace structure of the state. The duration will also depend on many other factors such as: the availability and the number of equipments or systems for training, the number of trainees, the availability of the necessary test equipment, the maintenance philosophy, and the teaching strategy used by the instructors, etc. As you can appreciate, identifying course duration without looking at the specific criteria of the state would be misleading and unrealistic.

General Recommendations

2.1 Accommodations and Equipment for Classroom-based Training

2.1.1 General

2.1.1.1

The *TRAINAIR Training Management Guideline (TMG)*, developed by the ICAO TRAINAIR Program, provides detailed information on training support functions, training delivery, administrative support functions, and the planning and design of training facilities, etc. Another manual, the *TRAINAIR Training Development Guideline (TDG)*, details the development methodologies of training courses for aviation personnel and provides guidelines on training techniques, validation, revision and implementation of course ware, design of tests, post-training evaluation, etc. Although the majority of the material included in both manuals may not be directly applied to the training of ATSEP, the aim of both the TMG and TDG is to provide civil aviation training managers with the tools they need to effectively manage their training organisations, and the providers of ATSEP training can effectively benefit from utilizing these tools. Both the TMG and TDG contain detailed information on the issues discussed in this chapter.

2.1.2 Classrooms and Equipment

2.1.2.1

Opinions differ on the amount of classroom space required for each trainee. The range of “ideal” space for each adult in a classroom varies from a low of 1.4 m² to a high of 6.7 m². The reason for the wide range in “ideal” figures is that classroom designers either envision different classroom environments or account for certain spaces within the classroom, such as aisles and front setback, differently.

2.1.2.2

The sizes of classrooms are affected by:

- number of trainees in a class;
- trainee workstation size;
- class configuration;
- size of aisles; and
- use of media (in particular, projected media and hands-on projects).

Note: ICAO recommends that the ratio of trainees per instructor be taken into account when planning the classroom size. In order to provide for sufficient supervision and control, a ratio of one instructor for every 15 trainees and 2 instructors for every 25 trainees is recommended.

2.1.2.3

The use of media and hands-on experiments are important factors in determining the amount of common space required in a classroom. The most commonly used visual media are slides, chalk/marker boards, overhead projectors, videotape and easels. The use of projected media (slides, overheads, TV, etc.) has considerable impact on room size and should be taken into consideration when assigning classrooms.

2.1.2.4

In planning the space requirements for training of ATSEP, training managers must take into consideration the trainee workstations, area required for hands-on training, faculty workstations and storage area.

2.1.2.5

Trainee workstation space includes the trainee's work surface, any additional equipment (terminal, audio/visual, etc.), a chair, and the space for chair pushback and manoeuvrability. The concept of workstation space is important when sizing rooms for classes containing different numbers of trainees. The total area allowed in a classroom for each trainee varies with the size of the class. An adequate work surface within the workspace is very important. The large amount of reference material used in the training of ATSEP requires considerably larger work surfaces than would be provided by the attached writing surface of an auditorium chair.

2.1.2.6

Computers can also be considered as useful training aids for ATSEP. Used as instructional media, computers usually take the form of desktop micro-computers with keyboard and monitor. They can communicate verbal and graphic information, and can accept verbal as well as manual or tactile responses. Computers may be used for drills, computer-managed instruction, testing and simulations. For detailed information about the use of computers as a training tool, training managers are advised to refer to the ICAO TRAINAIR document — *Computer Application in Training*.

2.1.3 The Learning Environment

2.1.3.1

The key to a good learning environment is the elimination of discomfort and other undesirable characteristics. Ten primary factors have been identified:

- the climate must be comfortable;
- lighting must be of adequate level for work or viewing;
- distracting sounds must be kept to a minimum;
- work areas must be aesthetically pleasing;
- workstations must be comfortable;
- work space must be adequate;
- work area must be reasonably clean;
- training equipment must be adequate;
- visual media must be visible; and
- audio media must be at a suitable level.

2.1.3.2

If any of these factors are unsatisfactory, the result can be distraction from the task at hand, and fatigue can result from the effort required of the trainee to adapt to a poor environment. One of the most widely recognized factors listed is the comfort of workstations, which includes chair comfort.

2.2 Performance Evaluation (Testing)

2.2.1

Performance evaluation (testing) is an integral part of the training process. Testing has many advantages for the trainee as a means of learning. It also provides incentive and motivation, and it confirms learning. The advantages for the instructors are the confirmation that the objectives have been met and whether instruction methods need to be improved. Tests should always be prepared with the sole purpose of measuring whether or not the trainee has achieved the training objective. Trainees must always be informed how they are going to be evaluated, so they can orient their efforts. The information must include the conditions that will exist during the test, the performance that is expected from the trainees, the standards of accomplishment that have to be met, and the consequences of an inadequate performance. It is recommended that errors on knowledge exams and skill tests be reviewed with trainees to reflect corrections to 100 per cent. Trainees must be informed of the result of their evaluation, and instructors must offer correction for improper responses.

2.2.2

Time and resource constraints may limit the amount of testing that can be given to each objective. However, the criticality of the subject and the performance difficulties which can be encountered should give some indication as to when, how and what performance evaluation should be required. Generally speaking, performance measurement is undertaken to evaluate whether or not the trainees have understood and assimilated the material taught, at the desired level.

- Skills are best tested by performance tests (the trainee performs the task described in the objective, under real or simulated conditions).
- Knowledge is best tested by oral or written tests.
- Attitudes are the feelings and opinions concerning the job, and other people, as well as personal conduct/responsibility. Some of the attitudes needed for ATSEP working in the CNS/ATM working environment are: always attentive and eager to learn; accepts responsibility willingly; feels capable of doing a good job; decisive about what should be done, and does it; looks for ways to improve; is able to adapt to changing circumstances; and has an adequate range of solutions to problems.

Therefore, attitudes are best tested by observations of performance, or by means of questionnaires.

2.2.3

There are no Terminal Objectives in this manual because Terminal Objectives refer to specific tasks, and these can vary substantially from states, service providers and manufacturers. The Terminal Objectives are subject to the systems or equipment used on the course being delivered in the Type Rating Phase. These objectives should be determined and administered by the Local Training Administration or responsible authority. All of them should be tested.

Phase One Basic Training

The Phase One Basic Training is designed to give an overview of the overall CNS/ATM technical and operational environment, as well as an overview of the most important systems and equipment, and the role of all the operators within this complex environment.

In order for the ATSEP to perform their role and duties, it is important that they understand each of the essential system components.

This phase has been split into three sub-sections with the possibility of teaching each chapter separately.

The following tables describe each of the chapters in general terms, including the topics and subtopics, the objectives, the level of complexity and the contents.

Chapter 3

Familiarisation with Air Navigation Services

3.1 International, National Organisations and Standards

Introduction

International regulations and air laws are promulgated to ensure the safety, regularity and efficiency of international aircraft operations. On the international scene, ICAO, pursuant to the provisions of Article 37 of the Convention on International Civil Aviation, develops and adopts Standards and Recommended Practices (Annexes to the Convention) as the minimum requirement for ANS operation. CNS/ATM systems operations are governed by international organisations that provide rules and standards to ensure safe operation and interoperability of Air Navigation Services world-wide. Among those are ICAO, ECAC, JAA, IEEE and others. Achievement of safety and efficiency in air navigation operation requires that all states accept and implement a common standard for Air Navigation Service with regards to training, licensing, certification, etc. The standardisation of operational practices for international services is of fundamental importance to prevent costly errors, which may be caused by misunderstanding or inexperience. Although this manual and other ICAO manuals address international ATSEP training, the need for standardisation is equally applicable to any ANS operation. The syllabus contained in this chapter gives a general view on aviation law, as adopted by ICAO and practised in international ANS operations.

Training Objective

Students shall describe the national and international organizations, the regulations, national legislation, and the work environment.

Condition: Given the description of a specific situation relating to a state Air Navigation Service provider, and the relationship with International and National authorities:

Performance: The trainee will be able to describe:

- a) the role of international and national organisations as well as the SARPS;
- b) The importance of applicable international and national regulations.

Standard of accomplishment: All the descriptions should include the essential points of the given situation.

This sub-section includes five (5) parts:

- 3.1.1 Introduction;
- 3.1.2 International and National Organisations and Standards;
- 3.1.3 Working Positions and Environment;
- 3.1.4 Environmental Protection;
- 3.1.5 Personal Safety.

Topic	Intermediate Objectives	Level	Content
Chapter 3.1 International, National Organisations and Standards	The students should be able to:		

3.1.1 Introduction			
1. National and International Organisations	1) Name the key national and international aviation organisations	1	ICAO, ECAC, EUROCONTROL, JAA
	2) Describe the impact these organisations have on ATM, and their interaction with each other	2	National authority, others...
	3) State the necessity to have special aviation law, the source and development of aviation law.	1	Show example of guidelines or recommendations ICAO Annex 2, Annex 10, Technical recommendations National Aviation Law

3.1.2 International and National Organisations and Standards			
1. ICAO	1) Explain the purpose and function of ICAO	3	History, convention, international agreement
	2) State the methods by which ICAO notifies and implements legislation	1	ICAO Annexes, ICAO documents, regional offices
	3) Describe the ICAO technical recommendation	2	PANS, SARPS, FANS ICAO Annexes 2 and 10
2. International Standards and Recommended Practices	1) Demonstrate the awareness of ATM Engineering Standards and Practices	2	ICAO Annex 1 and 10 Document 8071 International Standards, IEEE, JAA: CCITT, guidance material on reliability and availability
	2) Describe the purpose of the CCITT	2	Guidance material on network, communication and frequency allocation
3. Other Agencies	1) Describe the purpose and function of other international agencies and their relevance to air traffic operations	2	ECAC, EU, JAA, ITU EUROCONTROL, other agencies from Africa, Asia,.....

Topic	Intermediate Objectives	Level	Content
4. Aviation Association	1) Describe the purpose of ATSEP, engineers, controller, pilot, airline and airspace user associations, and their interaction with ATM	2	IFATSEA, IEEE, IFATCA, IFALPA IATA, IEA, IAOPA, IACA Other civil or military services
5. International Dimension	1) Explain the relationship between states and the relevance to ATC operations	2	Harmonisation, flow management, bilateral agreement, sharing of radar data, or other information International Civil Aviation Organisation (ICAO) ECAC Harmonisation program EATCHIP/EATMP
	2) Demonstrate an awareness of the legal framework of International and National ATC regulations	2	ICAO, EUROCONTROL, ITU....
	3) Demonstrate an awareness of the roles and specific functions of a range of international bodies	2	Major studies, research programmes and policy documents, FANS
6. National Legislative Procedures	1) Describe the methods by which legislation is notified and implemented	2	ICAO Annex 15, AIS, AIP, AIC, SUP Type of publication, AIRAC, NON-AIRAC NOTAM, integrated aeronautical information package, national legislation
	2) State the appropriate accountabilities and responsibilities	1	Technical and operational responsibility System management
7. National Regulatory Body	1) Name the body responsible for certification and enforcing legislation for technical procedures	1	Department, quality control, safety management, documents in use
	2) Describe how the regulatory body carries out its safety regulation and responsibilities	2	Technical safety department, redundancy policy

Topic	Intermediate Objectives	Level	Content
8. National Aviation Associations	1) Describe the purpose of national ATSEP, pilot, controller, airspace user associations and their interaction with ATM	2	National organisation Professional organisation and representation to international body

9. National Organisations	1) Describe the history and organisational structure of the national CAA	2	History of your national organisation, national policy, agencies Headquarters, regulator, provider
	2) Describe the purpose and function of appropriate national agencies and their relevance to ATM operations	2	Civil aviation administration agencies, your organisation or department, government agencies, military agencies....
	3) Describe the organisational structure and functions of the major departments within the National CAA, and particularly the technical organisation	2	Provider organisation Technical organisation flow chart, control centres, operational flow chart, airports Outstations civil/military interfaces Other national or international interfaces, bilateral agreements
	4) Describe the operational services and list the type of existing Air Navigation Services (ANS) and list the Air Traffic Services		ATM (ATS, ATFM, ASM) ATC (ACC, TWR, APP) FIS/AIS, Alerting...

3.1.3 Working Positions and Environment

1. General	1) Describe the workplace, fire and safety regulations	2	Pass a simple first aid test, fire exit, safety regulation, building, rest room, ID card
	2) Describe the maintenance policy, the safety policy and quality control related to systems	2	Maintenance concept and philosophy, system certification, ISO certification
	3) Identify the equipment in the working position	3	Stores and requisitioning process Safety procedure, certification of equipment, tools, measuring instruments

Topic	Intermediate Objectives	Level	Content
	4) Describe the environment surrounding your building	2	Airport environment, tarmac rules, security, ID card, location of NAVAID....
	5) Describe the special rules that apply in this environment	2	NAVAID station, safety rules, power and logistic suppliers, fire brigade Special rules for driving in airport environment, use of radio (radio licence), ILS/localiser testing vehicle.....

2. Study Visits	1) Familiarisation with technical and operational ATM facilities	0	Technical room, outstations, ACC, TWR, APP, AIS Radar, NAVAID and communications facilities
	2) Familiarisation with airport facilities and local operator	0	Airport services, airlines, customs....

3.1.4 Environmental Protection

1. Environmental Protection	1) Recognise the importance of environmental protection	0	Air, water, noise
	2) Recognise the importance and danger of non ionising electromagnetic radiation	1	Power transmitter and radar transmitter

3.1.5 Personal Safety

1. Personal Safety	1) To be aware of personal safety responsibilities in the work environment	0	Safety statement, high voltage precautions
	2) To be aware of potential hazards to health and safety generated by equipment, or contained within the work environment	0	First aid....
	3) State safety procedures for persons working on or near such equipment	1	Radar beam, handling of dangerous materials (TR cells, components with radio active element).....
	4) State any applicable legal requirements	1	Procedures in use, company rules, national rules

3.2 Familiarisation with Air Traffic Services, Airspace Standards, Meteorology and Altimetry

Introduction

The ATSEP are performing several critical tasks on CNS/ATM systems/equipments, which could impact on users. In order for ATSEP to fully understand the impact of their work on these systems, they must have a sound knowledge of the operational environment, such as Air Traffic Management (ATM). ATM systems are vital in order to provide safe, reliable and efficient delivery of Air Traffic Services. The consequences of system outages and their direct impact on users (i.e. pilots, air traffic controllers), may result in unsafe situations or cause excessive delays in airline operations.

ATSEP must understand the effects of varying temperature and weather conditions on the CNS/ATM Systems. For example high-level humidity or snow accumulation may impact on radio frequencies. They also must have a good appreciation of altimetry; height, altitude and flight level.

The syllabus contained in this sub-section gives a general view of these elements.

Training Objectives

Students shall describe Air traffic Services, Airspace Standards, Meteorology, and Altimetry.

Condition: Provided with a broad outline of Air Traffic Services, Airspace Standards, Meteorology and Altimetry, and through simulated situations:

Performance: The trainee will be able to describe:

- a) the role of the national ATM services, clients and customers;
- b) the importance of separation standards and collision avoidance;
- c) the importance of meteorology and altimetry, and how they can affect operations.

Standard of accomplishment: All the descriptions should include the essential points of the given situation.

This sub-section includes eight (8) parts:

- 3.2.1 Airspace Users and Customer Relations;
- 3.2.2 Air Traffic Management;
- 3.2.3 Separation Standards and Collision Avoidance;
- 3.2.4 Meteorology, Altimeter and Level Allocation;
- 3.2.5 Atmosphere and Atmospheric Processes;
- 3.2.6 Meteorological Phenomenal and Codification;
- 3.2.7 Meteorology Tools and Equipment;
- 3.2.8 Altimetry and Operational Aspects.

Topic	Intermediate Objectives	Level	Content
Chapter 3.2 Familiarisation with Air Traffic Services, Airspace Standards, Meteorology and Altimetry	The students should be able to:		

3.2.1 Airspace Users

1. Civil Aviation	1) Be aware of the different airspace requirements for civil aircraft	0	Commercial flying, recreational flying, gliders, balloons, VFR, IFR....
-------------------	---	---	---

2. Military Aviation	1) Be aware of the different airspace requirements for military aircraft	0	Low-level flying, test flight, special military operations, training...
----------------------	--	---	---

3. Expectations and Requirements of Pilots	1) Be aware of the expectations and requirements of pilots	0	
--	--	---	--

4. Customer Relations	1) State the role of ATM as a service provider	1	System of funding, en route charge, landing charge, system of clearing (Eurocontrol).....
	2) Recognise the means by which ATM is funded	1	

3.2.2 Air Traffic Management

1. Terminology and Units of Measurements	1) Apply the terminology and units of measurement appropriate to ATM	3	Glossary, ACC, APP, TWR, TMA, CTR....
	2) Demonstrate an understanding of ATM terminology	2	

2. Air Traffic Control Services	1) Describe the types of flight	2	ICAO Annexe 11
	2) Explain the division of ATM services	2	AIP, national services
	3) Demonstrate an awareness of airspace organisation and associated concepts	2	IFR, VFR, CVFR, civil, military.... Airways within national boundaries, TMA, CTR

Topic	Intermediate Objectives	Level	Content
	4) Describe the functions and services provided by ATC and the different ATC tasks	2	ICAO Annexe 11
	5) Describe the sectorisation	2	Principle of sectorisation, logical sectors, physical sectors....
	6) Describe the data displayed on the screen	2	Radar track, SSR code, labels, maps.... See a controller position screens Flight information region, Area Control Centre, Terminal Manoeuvring Area, APP, TWR.
	7) Describe the function of ground control	2	
	8) Describe the function of tower control	2	
	9) Describe the function of approach control	2	The task of ACC, approach, tower and oceanic control
	10) Describe en-route control	2	
	11) Describe the transfer of control	2	
3. Flight Information Service	1) Define FIS	1	ICAO Annexe 11, AIP
	2) Define the scope of the FIS	1	National organisation, FIC
	3) Explain the responsibility for the provision of FIS	2	ATIS, VOLMET, RTF, data link....
	4) State the methods of transmitting information	1	
	5) Issue information to aircraft	2	State of Nav aids, weather, flight safety information, NOTAM....
4. Alerting Service	1) Define ALRS	1	ICAO annexe 11
	2) Define the scope of the ALRS	1	
	3) Differentiate between phases of emergency, and between distress and urgency signals	2	Uncertainty, alert, distress, mayday, pan, visual signals Responsibilities Local organisation

Topic	Intermediate Objectives	Level	Content
5. Air Traffic Flow Management	1) Define ATFM	1	Flow control, Integrated Initial Flight Plan Processing System (IFPS), Central Flow Management Unit (CFMU), slot, national organisation and interface....
	2) Describe the scope of ATFM	2	Fields of the flight plan and their uses
	3) Demonstrate an awareness of the content of a flight plan and state the different fields	2	Exchanges between centres, OLDI messages, estimated times
	4) Explain the life cycle of a flight plan	2	
	5) Explain the responsibility for the provision of ATFM	2	Data base, Eurocontrol CFMU....
	6) State the methods of providing ATFM	1	
6. Aeronautical Information Services (AIS)	1) Define AIS and the responsible bodies in charge of aeronautical legislation	1	ICAO Annexe 15 CAA, military....
	2) Define the methods by which the legislation is notified and implemented	1	ICAO annexe 15 Code of the air, AIP, Notam, SUP, AIC , national services
	3) Define the structure of the AIS, its area of responsibility and its position inside the national air traffic services	1	ICAO annexe 15
	4) Describe the Aeronautical Information Publication (AIP)	2	ICAO Annexe 11 Data contents of AIP, SUP, AIC. Types of publication (AIRAC, NON-AIRAC), data collection and preparation and data format, distribution channels.
	5) Define the aeronautical charting service	1	ICAO Annexe 4 Types of charts, operational use and distribution channel
	6) Define the Aeronautical Information Regulation and Control (AIRAC) and the Aeronautical Information Circular (AIC)	1	

Topic	Intermediate Objectives	Level	Content
7. Airspace Management	1) Define ASM	1	Procedures, airways system design, points, maps design. Reference document Airspace delegation (if it exists) Flexible use of airspace, airspace design
	2) Describe the scope of ASM	2	
	3) Explain the responsibility for the provision of ASM	2	
	4) State the methods of managing airspace	1	

8. Particular Situation	1) Describe the particular problems confronting ATM	2	Weather conditions, environment, special flights, military activity, emergencies, search and rescue operation, hijacking, faulty aircraft equipment, faulty ground equipment
-------------------------	---	---	--

9. System and Equipment	1) Describe the operational importance of equipment and facilities provided for ATM	2	Reliability, redundancy, contingency, procedural backup
	2) Describe the emergency procedure in case of equipment failure	2	Responsibilities, restriction, emergency procedure
	3) Demonstrate an awareness of future developments in systems and ATM practices which will impact upon services provided by ATC	2	GNSS

10. Co-ordination	1) Explain the principle of co-ordination and transfer	2	Notification, negotiation, agreement, transfer of flight data, local agreements, bilateral agreements between countries.
	2) Appreciate the need for co-ordination	2	
	3) Describe the means of co-ordination	2	Data link, telephone, intercom, voice

3.2.3 Separation Standards and Collision Avoidance

1. Vertical Separation	1) State the vertical separation standards and procedures	1	Standard separation, RVSM (AIP, ICAO)
------------------------	---	---	---------------------------------------

Topic	Intermediate Objectives	Level	Content
2. Horizontal Separation	1) State the longitudinal separation standards and procedures	1	Separation based on time and distance
	2) State the lateral separation standards and procedures	1	Aircraft performance
3. Visual and Geographic Separation	1) State the occasions when visual separation can be use 2) Explain the use of geographic separation	1	Separation provided by pilot
4. Wake Turbulence Separation	1) Explain the wake turbulence categories and separation	2	
5. Radar Separation	1) Explain the use of radar in ATS	2	
	2) Explain the radar separation standards and procedures	2	
6. Collision Avoidance	1) Explain the Airborne Collision Avoidance System and the effect on ATC operations	2	ACAS, TCAS
	2) Explain the conflict alert systems and their effect on ATC operations.	2	MTCA, STCA, MSAW, DAIW
7. Separation	1) Be aware of the separation standards that apply to the ACC	0	Explanation of how controllers apply the ACC separation, restriction due to faulty equipment
	2) Be aware of the separation standards that apply to APP and TWR	0	Identify for APP and TWR (see also the function of ACC, APP and TWR)
8. Familiarisation with ATM Simulator	1) Confirm an understanding of the operational ATC role through practical exercises on ATC simulators, or with flight simulator	3	Exercise on simulators (ACC/APP simulator, TWR simulator, flight simulator....), follow a flight plan

Topic	Intermediate Objectives	Level	Content
	2) Explain the need for good communications between operational staff	2	During the flight see the role of ACC, TWR, APP, FIS and all the technical systems involved for each step
	3) Explain the need for good communications between operational staff and technical staff	2	Co-ordination between sectors, between centres Good communications in case of system failure, description of new specifications, identification of problems....

9. Familiarisation Visits	1) Undertake station familiarisation visits	0	Visits
	2) Visit various operational stations in order to state their purpose, function and role in relation to ATC operations	0	

3.2.4 Meteorology, Altimeter and Level Allocation

Introduction

1. Terminology and Units of Measurement	1) Demonstrate an awareness of the terminology and units of measurement appropriate to meteorology	1	Glossary and abbreviations
2. Aviation, ATM and Meteorology	1) Explain the relevance of meteorology in aviation and in ATC environment	2	From the operational point of view
	2) Explain how technical systems contribute to ATC operations	2	
	3) Describe the function and the performance of the weather measurement systems	2	
3. Organisation of Meteorological Services	1) Name the basic duties, organisations and working methods of meteorological offices	1	Local, national and international meteorological offices
	2) State the international and national standards for the exchange of meteorological data	1	Local, national and international meteorological offices

Topic	Intermediate Objectives	Level	Content
		1	National services, interface with your ATM systems Networks, satellite, Meteosat....

3.2.5 Atmosphere and Atmospheric Processes

1. Composition and Structure	1) State the composition and structure of the atmosphere	1	Gasses, layers, troposphere, stratosphere, mesosphere, thermosphere
------------------------------	--	---	---

2. Standard Atmosphere	1) Define the elements of the ISA and why it has been defined	1	ICAO standard atmosphere, temperature, pressure, density
------------------------	---	---	--

3. Air Masses and General Air Circulation and Frontal Systems	1) State the origin and general location of typical air masses	1	Polar, arctic, equatorial, maritime and continental....
	2) State the major wind systems on the Earth	1	Polar, east winds, west winds, zone....
	3) Define high and low pressure systems	1	Trade winds, inter-tropical convergence zone
	4) State the differences between various fronts and the associated weather	1	Warm front, cold front, occluded front....

4. Heat and Temperature	1) Identify the processes by which heat is transferred and how the atmosphere is heated	1	Radiation, convection, conduction, turbulence
	2) Describe how temperature varies	1	

5. Water in the Atmosphere	1) Differentiate between the terms related to air saturation levels	2	Saturation, condensation, evaporation, relative humidity, dew point
----------------------------	---	---	---

6. Air Pressure	1) Define the relationship between pressure, temperature and altitude	1	QFE and QFF definition, QNH definition, QNH computation, standard pressure, use in ATM (see also altimeter setting)
-----------------	---	---	---

Topic	Intermediate Objectives	Level	Content
3.2.6 Meteorological Phenomenal and Codification			
1. Clouds	1) Identify the different conditions for the formation of clouds, cloud types and state their characteristics	1	
	2) State how the density of clouds is measured	1	
	3) Define the cloud base and ceiling	1	
2. Precipitation	1) State the significance of precipitation in aviation, and the types of precipitation	1	Rain, snow, sleet, hail
3. Visibility	1) State how visibility is measured and the significance for ATM	1	RVR, camera, transmission of data, impact on ILS categories
4. Wind	1) State the significance of wind phenomena and types	1	
	2) State how wind is measured	1	
5. Meteorological Hazards	1) State the meteorological hazards to aviation	1	Turbulence, storms, icing, wind shear....
6. Impact on ATM	1) To be aware of the impact of the different atmospheric conditions on ATM operations	0	Give examples
7. METAR and TAF Code	1) Explain the aim and use of METAR and TAF code	2	Observation at airport, METAR/SPEC, forecast TAF/TREND, aviation weather report
	2) Define the content of the METAR	1	Content of the message, wind, visibility, type of weather, clouds, temperature, dew point, pressure
	3) Decode a METAR by using the METAR table	2	Examples of METAR and interpretation
	4) Define the content of the TAF code	1	Example of Terminal Area Forecast message and interpretation

Topic	Intermediate Objectives	Level	Content
8. Significant Weather Information	1) Define the aim and use of SIGMET	1	Content of the Terminal Area Forecast, examples
	2) Define the aim and use of GAMET	1	
	3) Define the aim and use of AIRMET	1	
	4) Define the aim and use of SWC and TEMSI chart	1	

9. Typical Situation	1) State the typical weather situation over your region	1	Examples
----------------------	---	---	----------

3.2.7 Meteorology Tools and Equipment

1. Meteorology Sensors	1) Explain the main functions of each tool	2	Sensors, anemometers, Runway Visual Range (RVR), barometers, ceilometer
	2) Explain the technical principle of each equipment and their location	2	Technical description of each system, photo of equipment...
	3) State the relevant measurements and instrumentation	1	System diagram (global)
	4) Define the main function of Meteosat	1	Radar, display, distribution, use for approach...
	5) Explain the main function of airborne and ground weather radar	2	Radar, display, distribution, use for approach... Visit approach display

2. Documents	1) State the main documents, national and international	1	
--------------	---	---	--

3. Information	1) State the different networks for transmitting meteorological information	1	Distribution system, network, Infonet, type of data transmitted.
	2) State the types of meteorological messages and reports	1	METAR, SPECI, SIGMET, FIS....
	3) Define the content, main function and characteristic of the broadcasting system	1	ATIS, VOLMET

Topic	Intermediate Objectives	Level	Content
4. System in Use in Your Unit	1) Describe with the help of a block diagram, the system that transmits the meteorological data	2	Block diagram of the system
	2) Name the ATSEP who are in charge of the of system maintenance	1	Name of the group of ATSEP, and how to contact them

3.2.8 Altimetry and Operational Aspects

1. Atmosphere Parameters and Altitude	1) State general consideration of the atmosphere with respect to altimetry	1	Atmosphere, pressure, standard atmosphere
	2) Explain the difference between QNE and QFF	2	Definition of QNE and QFF
	3) Explain the different parameters of the atmosphere	2	Atmosphere layers, ICAO standard atmosphere – ISA, pressure lapse rate (ISA)
	4) Explain the atmospheric pressure QNH	2	Definition of the QNH, QNH computation, example
	5) State the two specific altimeter errors	1	Altimeter errors caused by non-standard atmospheric conditions

2. Temperature Effect on Altimeters	1) Describe the altimeter errors due to the temperature	2	Indicated altitude, true altitude > IA, <IA
	2) Describe an example of error with the help of a temperature table,	2	Table of temperature deviation from ISA, example of map

3. Pressure Effect on Altimeter	1) Describe with the help of a drawing the altimeter errors in different pressure conditions	2	Standard, low and high pressure conditions Altimeter setting
---------------------------------	--	---	---

4. Altimeter Settings	1) Describe the different altimeter settings with the help of a drawing	2	In flight or ground QFE setting, QNH setting, standard setting, flight level and separation, QNE setting
	2) Show the lowest usable flight level with help of a drawing		

5. Flight Procedures	1) Describe the departure, en-route and arrival procedures	2	Departure procedure transition altitude, transition level and transition layer, flight level and separation, low pressure situation Lowest usable flight level
----------------------	--	---	---

Topic	Intermediate Objectives	Level	Content
6. Altimetry	1) Appreciate the relationship between height, altitude and flight level	3	QFE, QNH, standard pressure
7. Transition Level	1) Appreciate the relationship between transition level, transition altitude and transition layer	3	Give examples for arrival, departure....
8. Level Allocation	1) Describe the cruising level allocation system	2	Flight levels, altitudes, heights Give examples

3.3 Familiarisation with CNS/ATM and Future Air Navigation System (FANS) Concepts

Introduction

Communication, Navigation, Surveillance and Air Traffic Management systems provide essential tools for the delivery of Air Navigation Services. ATSEP main duties are to maintain, modify, repair, and develop these systems, while keeping them fully operational and safe. The consequences of system outages and their direct impact on the users (i.e. pilots, Air traffic controller) may result in unsafe situations, or cause excessive delays in the operation of the airline industry.

The syllabus contained in this sub-section gives a general view of these elements, including power distribution.

Training Objective

Students shall be familiar with Nav aids, communication, surveillance and data processing systems used for ATM.

Condition: Provided with a broad outline of the Nation ANS customers, users, and systems, and through simulated situations :

Performance: The trainee will be able to describe:

- a) the navigation, communication, surveillance, data processing, power distribution and Satellite navigation systems used in the national ANS.

Standard of accomplishment: All the descriptions should include the essential points of the given situation.

This sub-section includes twenty-nine (29) parts:

- 3.3.1 Voice Communications
- 3.3.2 Air – Ground – Air
- 3.3.3 Ground – Ground
- 3.3.4 Recording (two groups may be in one topic)
- 3.3.5 Data Link Communications
- 3.3.6 Navigation
- 3.3.7 Radio Navigation Aids
- 3.3.8 Satellite Based System – GNSS Technical Overview – Satellite Navigation
- 3.3.9 Aircraft Systems
- 3.3.10 Flight Inspections
- 3.3.11 Surveillance and Radars
- 3.3.12 Radar
- 3.3.13 Surface Movement Control
- 3.3.14 Radar Formats
- 3.3.15 Automatic Dependent Surveillance
- 3.3.16 Future Systems
- 3.3.17 Radar Station
- 3.3.18 Networks
- 3.3.19 ATM Specific Networks
- 3.3.20 Data Processing (DP)

- 3.3.21 Radar
- 3.3.22 Flight Plan Processing
- 3.3.23 Display
- 3.3.24 Online and environmental data
- 3.3.25 Facilities
- 3.3.26 Power Supply
- 3.3.27 Air Conditioning
- 3.3.28 Monitoring
- 3.3.29 Electromagnetic compatibility

Topic	Intermediate Objectives	Level	Content
Chapter 3.3 Familiarisation with CNS/ATM Systems	The students should be able to:		

3.3.1 Voice Communications

General

1. COM System and Equipment	1) Describe the functional elements of a voice communication system	2	Radio, Ground-Air, Ground-Ground, switch, intercom, telephone
	2) Explain the purpose of voice communication system in ATC	2	Operational purpose, use of radio in ATC, sectorisation, number of frequencies, special frequencies, distress
	3) Define the concept and terminology in use for voice communication	1	
	4) Explain the principles of voice communication systems	2	

2. Radio	1) State the principles of radio	1	Frequencies, phase, power, period, pulsation, wavelength Dipole antenna
	2) Recognise the characteristics of radio waves	1	E-Field, M-Field, polarisation
	3) Describe the principles of electromagnetic propagation	2	
	4) State the use, characteristics and limitations of frequency bands	1	Frequency spectrum and bands Frequency allocations, HF, VHF, UHF, frequency channelling Frequency bands used in ATC, communications, navigation and other applications in aeronautical mobile service
	5) State the different factors that can affect propagation of radio waves	1	Absorption, reflection, refraction, diffraction

Topic	Intermediate Objectives	Level	Content
3. Radio Communications	1) Describe the working principles of a transmitting and receiving system	2	Audio frequency, carrier, different types of modulation, detection, synthesiser....
	2) Describe, with a basic block diagram, the components of a transmitter system	2	Microphone, push to talk, amplifier, oscillator, modulator, antenna....
	3) Describe, with a basic block diagram, the components of a receiver system	2	Mixer, detector, AGC, squelch....

4. Legal Requirements	1) State ICAO legal requirements	1	Recording and retention of communications Annex 10 Volume II Channel spacing
-----------------------	----------------------------------	---	--

5. ATIS and VOLMET Service	1) Describe Automatic Terminal Information Services	2	Message format, content, frequencies, national
	2) Describe the automatic data link service to ATIS, METAR and VOLMET	2	Data link, ACARS, ARINC 620/623, SITA networks, METAR

3.3.2 Air – Ground - Air

1. Requirement	1) State the requirement for secure Air-Ground voice communications	1	Sector frequency, range, emergency
----------------	---	---	------------------------------------

2. Signal Path, Equipment	1) Describe the complete signal path from the control suite to the aircraft	2	Block diagram of the complete path, location of equipment, remote station, TX/RX separation
	2) State the Voice COM equipment situated in the operational position and describe the purpose and operation of each element	2	Microphone, headphone, switching panel, redundancy, interface with technical room....
	3) Describe the purpose and principles of operation of the radio switch	2	Functionality, redundancy, basic operation of routing and switching, sectorisation, frequency coupling, short recording and instant replay possibility, RX/TX function, flexibility, sector....

Topic	Intermediate Objectives	Level	Content
	4) Describe the transport system used from the technical room to the transmitter/receiver station	2	Telephone line, optical fibre, network, analogue interface, digital interface, multiplexing techniques, sharing transport with other data....
	5) Describe the principle of radio link equipment	2	Location, frequency used, parabolic antenna, interface, link redundancy
	6) Describe the Human Machine Interface (HMI) of current devices in use	2	Functionality....
	7) Describe the TX and RX station and the antenna system	2	TX location, RX, location, antenna switching and filtering, number of RX per antenna, number of TX per antenna, polarisation.... Environment
	8) Describe the tools used for testing equipment	2	Power meter , TOS measurement, spectrum analyser,
3. Emergency System	1) Describe how continuity and security of service is achieved	2	Redundancy, back up system, bypass
	2) Describe the emergency system in use	2	Block diagram, location of TX and RX....
4. Perturbations and How to Cope with Them	1) State the problems we can have with VHF communication and the problems caused by frequency congestion	1	Reflection, earth spherical form, absorption, refraction, diffraction, mountains, frequency congestion, not enough frequencies....
	2) Explain the purpose and principle of 8.33 channel spacing	2	8,33 and 25 Khz, 8,33 bands, 8.33 terminology (channels, frequencies)
	3) Explain the purpose and principle of the CLIMAX frequency system	2	Transmitter frequency, frequency shift, receiver, filter, operational use....
	4) Explain the criteria required to safely use the same frequency at different ATM units	2	Operational range, minimum distance between two TX on the same frequency
5. Aircraft Equipment, On Board Systems	1) List the voice communication systems used on board	1	VHF/UHF transmission, HF transmission

Topic	Intermediate Objectives	Level	Content
	2) Explain the functionality of the different parts found in a cockpit, with the help of an example	2	Block diagram for an aircraft (for example B-737, airbus....)
	3) Describe the antenna systems of a aircraft, with the help of a picture	2	Give examples of VHF/UHF communication system on board, (for example, picture of B-737 and other aircraft...), give example for an HF system Give examples of a typical airborne transceiver Examples, BOING, AIRBUS, P8....

6. Future Development	1) List the future developments and techniques in ATM voice communication	1	Frequency congestion, the need for data link, VHF data link, VDL3/4
-----------------------	---	---	---

7. ATIS	1) Describe the system in use to transmit ATIS, VOLMET messages	2	Block diagram of your system, location, data link....
---------	---	---	---

8. National Systems, Systems in Your Country	1) Describe the complete voice communication system used in your country, with the help of a drawing	2	Name of systems, path from controller position to antennas
	2) Visit sites	1	Visit station

3.3.3 Ground – Ground

1. Requirement	1) State the requirement for secure Ground-Ground voice communications	1	Rules, needs, purpose
	2) Describe the national and international need for telephone connections	2	Map of the different location, national network, international connection

2. Equipment	1) Describe the function and the basic operation of the Ground - Ground communications system	2	Block diagram, purpose of operational, function
	2) Describe the routing and switching equipment	2	Functionality, telephone switching, interphone switching, hotline switching
	3) Describe the HMI of current system in use	2	See function of HMI, visit

Topic	Intermediate Objectives	Level	Content
3. Interface	1) Describe how Ground – Ground systems interface to provide an integrated service to ATM operations	2	PTT interface, local PABX equipment, multiplexing system, digital system, protocol Protocol, address, ...
	2) Describe the system to ensure interchanges between ATC centres	2	
4. Emergency Systems	1) State how continuity and security of service is achieved	1	Redundancy, bypass, location of RX/TX
	2) Describe the emergency system in use	2	Block diagram of your system
5. Future Development	1) List the future developments and techniques in ATM Ground – Ground communication	1	
	2) List the new technologies that may impact on Ground-Ground communications	1	

3.3.4 Recording (two groups may be in one topic)

1. Legal	1) Demonstrate an awareness of legal requirements for recording and retention of Air-Ground and Ground – Ground communication	2	National and international rules, ICAO recommendations Type of data, voice, telephone, ambient microphone
	2) State the methods in use in your country	1	
	3) State the type of data recorded in your country	1	
2. Equipment	1) Describe the recording system in use	2	Block diagram, safe, location Function, data recorded, COM voice channel, telephone line
	2) List the function of the equipment	1	
	3) Describe the HMI of current system in use	2	

3.3.5 Data Link Communications

1. General	1) Describe the purpose and use of data link	2	
------------	--	---	--

Topic	Intermediate Objectives	Level	Content
2. System ACARS	1) Define ACARS services and describe the overall purpose of it	1	Aircraft communication, addressing, reporting, reduce flight crew, automatic transmission
	2) Describe with the help of a diagram the architecture of ACARS including the onboard and ground architecture	2	CDU, ACARS MU VHF RGS, network provider, message storage MSS, message routing DSP, onboard architecture, ground architecture, cockpit orientation, (Example for an aircraft, BOEING, AIRBUS....)
	3) Explain the ACARS technology	2	VHF channel used, protocol, modulation (AM-MSK)
	4) State the performance, quality and limitation of the ACARS protocol	1	Block, time out, throughput, ACARS message, FANS structure
	5) State the improvements for ATS	1	ATIS automatic terminal information service, Pre-departure Clearance (PDC), Oceanic Clearance Messages (OCM).....
3. VDL Technologies	1) State the need for improvement and new technologies	1	VHF data link technology , ICAO needs, VDL technologies
	2) List the VDL modes	1	VDL modes (Modes 1,2 3 4), VDL-2, mode use, ACARS transition issues.....
	3) Describe, with the help of a diagram, the VDL architecture	2	VDL modes (Modes 1,2 3 4), VDL-2, mode use, ACARS transition issues.....
4. Aeronautical Data Communication	1) What is the significance of ATN and what are the main components of ATN?		Definition, Need for enhanced communication network, need for common integrated network, ATN components, ATN end system, ATN subnetwork, ATN router....

Topic	Intermediate Objectives	Level	Content
	2) State the existing network and describe the evolution of Air-Ground and Ground-Ground communications	2	Evolution of Air-Ground communications, evolution of Ground-Ground communications, ATN transition issues, expectations, supporting organisations (see also data communication)

3.3.6 Navigation

General			
1. Definition and Units of Measurement	1) Describe the terminology and units of measurement appropriate to navigation and radio navigation	2	See Glossary
2. Purpose and Use of Navigation	1) Explain the need for navigation in aviation	2	Historical overview, celestial, on board, on ground, radio aids, satellites
	2) Describe the principle and purpose of navigation	2	
	3) Characterise the navigation methods	2	
3. Place and Movement of the Earth	1) Explain the earth's properties and their effects	2	Form, size, rotation, revolution in space, units of the time, time zone, UTC
4. System of Co-ordinates, Direction, Distance and Measurement	1) Explain the principles of the co-ordinates and the principle of a grid system	2	e.g. Degrees, minutes, seconds, latitudes, longitudes, international and national references, World Geodesic Standard, WGS-84
	2) Estimate position on the earth's surface and distance and direction between two points	2	Circle, rhumb line, cardinal and inter -cardinal points, latitude/longitude
	3) Describe how to measure the distance between two points	2	

Topic	Intermediate Objectives	Level	Content
5. Magnetism	1) Explain the general principles of the earth's magnetism	2	North, true north, magnetic north, variation, deviation, inclination, conversions between true magnetic and compass north....

6. Maps and Charts	1) State how the earth is projected to create a map	1	Types of projections
	2) Describe the properties of a good map and the use of different projections	2	True azimuth, rhumb line and great circle, scale, conformity....
	3) Differentiate between the various maps and charts and explain their specific use	2	AIP maps and charts, international, national, military maps and charts....
	4) Explain symbols and information found on maps and charts	2	Examples of maps in use

7. Influence of Wind	1) Explain the wind influence on the flight path	2	Heading, track, drift, wind vector, wind correction
----------------------	--	---	---

8. Speed	1) Explain the relation between various speeds used in aviation	2	Ground speed, air speed, (true air speed. Indicated, calibrated/equivalent air speed)
	2) Explain the use of various speeds in ATM	2	

3.3.7 Radio Navigation Aids

1. NDB	1) Explain the purpose and working principles of NDB	2	General history Ground base equipment
	2) Describe, with an overall schematic, the function and performance of NDB	2	Frequency, identification, antenna, range, location of station, photo
	3) Describe the precision and limitations of NDB	2	Operational use
	4) Explain, with the help of an aeronautical chart, the significance of the NDB data	2	Maps, identifier, frequency, co-ordinates, orientation, NDB symbol. Example for one of your NDB
	5) Describe the aircraft equipment using NDB	2	Example of an aircraft system implementation, photo of cockpit (Boeing, airbus....)
	6) List the different operational uses of NDB	1	Basic orientation, example of procedure and aeronautical chart

Topic	Intermediate Objectives	Level	Content
2. VOR	1) Explain the purpose and principles of VOR	2	Ground based equipment, principle, function, location, photo
	2) Describe, with an overall schematic, the function and performance of VOR	2	Frequency, identification, antenna, range
	3) Describe the principle of the conventional VOR	2	Description of VOR, electronics, frequencies, antennas, phases, identification, modulation
	4) Describe the principle of the Doppler VOR	2	D-VOR, electronics, frequencies, antennas, phases, identification, modulation
	5) Explain, with the help of an aeronautical chart, the significance of the VOR data	2	Maps, identifier, frequency, co-ordinates, orientation, VOR symbol. Example for one of your VORs on MAP
	6) Describe the precision and limitations of VOR	2	Range, precision, operational use, precision, coverage, service volume (high altitude, low altitude, terminal)
	7) Describe the aircraft equipment to use VOR	2	On board equipment, RNAV, example of an aircraft system implementation, photo of cockpit (Boeing, airbus ...)
	8) Explain the working principle and operational use of on board systems	2	Basic orientation, example of procedure and aeronautical chart, OBI, angular deviation, course deviation
	9) Describe the principle of TACAN	2	Procedure
3. DME	1) Explain the principle and purpose of DME	2	Ground based equipment, definition, principle of measuring distance, ground station, on board system
	2) Describe with an overall schematic the function and performance of DME	2	Electronics, frequencies, antennas, phases, identification, modulation

Topic	Intermediate Objectives	Level	Content
	3) Describe the different parts of a DME	2	Pulse length, pulse coding, messages, identification, timing, decoder.... Visit, photo
	4) Explain with the help of an aeronautical chart the significance of the DME data	2	Maps, identifier, frequency, co-ordinates, orientation, DME symbol. Example for one of your DME
	5) Explain the working principle and operational use of on board systems	2	Pilot display, system implementation (photo of instrument), example of procedure and aeronautical chart
	6) Explain the precision and limitation of DME	2	Display distance (slant range), number of aircraft
	7) Explain the purpose of VOR/DME pairing or ILS/DME pairing	2	VOR/DME pairing, ILS/DME pairing

4. Landing Systems, ILS, MLS	1) Explain the overall principle of ILS and the composition of an ILS system	2	General, ground and airborne components Definition, glide path beam, localiser beams, categories, markers, DME
	2) Explain with an overall schematic the function and performance of ILS	2	Electronics, frequencies, antenna array, phasing, identification, modulation, coverage, precision, limitation Explain the approach categories, accuracy, cat1, cat2, cat3
	3) Describe the principle of the localiser	2	TX, antennas, frequencies, form of the beam, show photo of system
	4) Describe the principle of glide path	2	TX, antennas, frequencies, form of the beam, glideslope
	5) Explain the use, precision and limitations of ILS/DME in airports	2	Equipment, procedure, low visibility procedures, cat1, cat2, cat3, basic ILS orientation, critical area, service volume
	6) Explain the working principle and operational use of on board systems	2	Show with drawing, the cockpit orientation and on board equipment

Topic	Intermediate Objectives	Level	Content
	7) Explain the principle of MARKER	2	System on board, procedures, ground transmitter, antennas, identification, distances from runway, outer, middle and inner marker. Show with drawing, the principle, TX, ground equipment, on board equipment
	8) Explain the principle of MLS	2	Show with drawing, the principle, TX, ground equipment, on board equipment, frequencies, possibilities, segment...
5. Visual Aids	1) To be aware of visual navigation systems	0	VASIS, PAPI, rotating beacon.

3.3.8 Satellite Based System – GNSS Technical Overview – Satellite Navigation

1. Satellite Based System	1) Demonstrate an awareness of history of satellite navigation	2	History
	2) Describe the architecture of relevant satellite systems	2	What is it, general principles
	3) Explain the purpose and principle of the Global Positioning System	2	GPS system, space segment, control segment, user segment GLONASS SYSTEM
	4) Describe the function and performance of each system	2	Function, precision, frequencies, clock
2. Satellite Navigation	1) Describe the purpose and principle of Global Navigation Surveillance System	2	GNSS
	2) Describe the principle of differential implementation	2	
3. GPS (Technical Overview)	1) To be aware of the history of GPS	0	History

Topic	Intermediate Objectives	Level	Content
	2) To be aware of the principle and performance of GPS	0	Satellite positioning theory, design principles, performance, current and future status Triangulating from satellites, measuring distance from satellites, timing importance, knowing where the satellite is in space, selective availability

4. GLONASS (technical overview)	1) To be aware of the history of GLONASS	0	History
	2) To be aware of the principle and performance of GLONASS	0	Satellite positioning theory, design principle, performance, current and future status

5. Systems Description	1) To be aware of Airborne Based Augmentation Systems	0	Requirements, inertial reference, receiver, monitor
	2) To be aware of Ground Based Augmentation Systems	0	Requirements, design principle, implementation
	3) To be aware of Space Based Augmentation Systems	0	Requirements, design principle, implementation , EGNOS
	4) To be aware of the future systems	0	GNSS-2, Galileo, GPS L5....

3.3.9 Aircraft Systems

1. Onboard Equipment	1) List the on board equipment	1	
	2) Explain the working principle and use of on board system	2	FMS, navigational computer, ILS, RNAV.....

2. Warning Systems	1) Explain the principle and performance of the Traffic Alert and Collision Avoidance system	2	TCAS, principle , frequency, radar, communication
	2) Explain the working principle and use of on board system	2	Performance of the systems, GPWS

Topic	Intermediate Objectives	Level	Content
3.3.10 Flight Inspections			
1. Legislation and Procedures	1) Explain the purpose of flight inspection	2	ICAO recommendation Annex 10 Volume I DOC 8071
	2) To be aware of legal requirements, recommendations and procedures	0	National legislation and procedures

2. Nav aids Inspection	1) To be aware of the procedures for ILS, DME and VOR equipment	0	Procedure in use in your country.
	2) Describe the ground and aircraft equipment	2	
	3) To be aware of the procedure for communication and radar flight inspection	0	Procedure in use in your country.

3.3.11 Surveillance and RADARS			
General			
1. Terminology and Units of Measurement	1) Describe the units of measurement appropriate to radar	2	Glossary, range, distance measurement, azimuth, sensitivity, coverage range, co-operative, non co-operative

2. Purpose and Use of Surveillance and Radar Systems	1) Explain the need for surveillance systems in aviation	2	Historical overview, types of radar, en-route, approach, airport, meteorological
	2) Describe the basic principles, purpose and operation of the surveillance systems in current use	2	Radar location, primary radar, secondary radar, coverage, range, distance measurement, azimuth, sensitivity, propagation, safety procedures
	3) To be aware of future developments	0	Frequencies Mode S, data link,

3.3.12 Radar			
1. Primary Radar	1) Explain the working principles of Primary Surveillance Radar	2	Independent surveillance, non co-operative, emission, reflection, reception of signal, speed of light....

Topic	Intermediate Objectives	Level	Content
	2) Describe the use of primary radar in ATC	2	Operational aspects, operational needs for ACC and APP, watch, monitor, vector separation....
	3) Recognise the characteristics of radar wavelengths	2	High frequencies and microwave technology, frequency bands, polarisation, health and safety
	4) Describe the system evolution and architecture	2	Block diagram
	5) Explain in principle, the basic elements of a typical primary radar system	2	Antennas, power module, transmitter, receiver, parameters, extraction, clock system.... Probability of detection MTI Plot extraction
	6) Describe, using an overall block diagram, the function and the performance of the primary radar system	2	Distance computation, azimuth computation, display information
	7) Explain the principle of primary plot extraction and describe the content of the plot message.	2	Plot extraction (see also radar processing), plot processing, track generation, display information
	8) List the elements which can affect radar performances	1	Meteo, rain, clouds, lake, mountains, building, reflection....
	9) Describe the differences between en-route, approach radar and airport radar	2	PRF, PRI, pulse length, frequency and power transmitted, number of turns per min

2. Secondary Radar	1) Explain the working principles of Secondary Surveillance Radar	2	Co-operative independent surveillance system, Radar SSR, transponder, frequencies,..
	2) Explain the different interrogation mode	2	Interrogation pulses, modes, P1, P3....
	3) Explain the different types of responses and coding of the transponder	2	Mode A, Mode C, military, civil, altitude coding, gray code, identification, code SSR
	4) Describe the use of secondary/monopulse radar	2	Operational procedures, need for ACC, watch, monitor, vector....

Topic	Intermediate Objectives	Level	Content
	5) Describe the system evolution and architecture	2	Radar station and interconnection
	6) Explain in principle the basic elements of a typical secondary radar system	2	Antennas, power module, transmitter, receiver, radar data processing, transponders, modes A, C, monopulse Mode S, parameters
	7) Describe, using an overall block schematic, the function and the performance of the secondary radar system	2	Plot extraction Plot processing, combined primary secondary plots.... Track generation, mono tracking
	8) Explain the principle of secondary plot extraction and describe the content of the plot message.	2	Data transmission to centres
	9) List the elements which can affect radar performances	1	Garbling, reflection, fruit, improvement with addressing system (see also primary radar)
	10) Define, with the help of an example, the functionality of the different parts found in a cockpit		Example of cockpit orientation
3. Weather Range	1) Describe the use of weather radar in ATC	2	Antenna, coverage, data processing
	2) Describe the system evolution and architecture	2	Displays
	3) Explain the system elements	2	
	4) Describe, using an overall block schematic, the function and performances of the weather radar.	2	Integration of meteorological data on controller display
	5) Describe airborne weather radar	2	
4. Precision Approach Radar	1) State the principle of PAR	1	Be aware of history, give principle and operational use

Topic	Intermediate Objectives	Level	Content
3.3.13 Surface Movement Control			
1. Surface Movement Control	1) Describe ATC requirements	2	Parameters Displays
	2) Describe the system evolution and architecture of surface movement radar	2	Mapping Data processing
	3) Explain the purpose and principles of a typical surface movement radar	2	
	4) Describe, using an overall block schematic, the function and performance of the system	2	
	5) Describe alternative systems (ground movement)	2	Captors and sensors
	6) To be aware of airport integrated ground movement control	0	Radar and other captors used for movement control around airport, see example of airport implementation

3.3.14 Radar Formats			
1. Radar Message Format	1) Describe ATC requirements	2	Radar maps, radar data presentations
	2) List the formats in use	1	Formats in use in your country, plot message, track message
	3) Describe the contents of the radar format in use in your country	2	Radar data format (ASTERIX and national or manufacture formats)
	4) Describe the different fields of the radar format	2	Example of format with description

2. Transmission of Radar Data	1) Describe the techniques used for transmission of radar data	2	Show, with block diagram, the complete path between radar station and the radar processing system
	2) Explain the need for harmonisation	2	National, international exchanges, technical and operational point of view

3. Mode S	1) State the principles of Mode S	1	
	2) Explain the use of Mode S in ATM	2	
	3) State the technical advantages of using Mode S	1	Type of interrogation, addressing, type of answer, processing

Topic	Intermediate Objectives	Level	Content
3.3.15 Automatic Dependent Surveillance			
1. ADS System	1) State the working principles of ADS	1	What is ADS, satellites (navigation and communication), ADS contract (ADS-C), ADS broadcast (ADS-B) GPS Data links
	2) Describe the system evolution and architecture	2	Ground segment Space segment
	3) Explain the use and limitation of Automatic Dependent Surveillance	2	Control segment Principles of the message/signal path

3.3.16 Future Systems			
1. Future Equipment	1) Be aware of developments in the equipment field	0	Equipment to be introduced in the near future
	2) Explain Future Air Navigation Systems (FANS) concepts and their impact on ATC	2	GNSS

3.3.17 Radar Station			
1. Radar Station	1) Participate in a visit of your radar stations	0	Visit of stations, type of equipment
	2) Describe special environment of the stations	2	Particular environment, mountain....

3.3.18 Networks			
1. Terminology, Units of Measurement and Signal Processing	1) Describe the different measurements appropriate to data communication, and describe the type of signal processing appropriate to data communication	2	Analogue to digital, digital to analogue, PCM, PCM30, BIT RATE, bandwidth

2. Purpose and Use of Data Communication System	1) Explain the need for data communication systems in aviation and the national and international needs	2	Historical overview, need for the transport of voice, radar, flight plan data on network, ...
	2) State the need for data communication system for Air-Ground communication	1	Frequencies congestion, ATCO and pilot workload, integration, multi-path
	3) State the need for data communication systems for Ground-Ground communication	1	

Topic	Intermediate Objectives	Level	Content
	4) Explain the need for a common and integrated network for ATM 5) Describe the basic principles, purpose and operation of the Data communication systems in current use for voice communication and data communication 6) Describe, using an overall block schematic, the function and the performance of the systems in use in your country 7) Demonstrate an awareness of connectivity of systems	2 2 2 2	Aeronautical Telecommunication Network (ATN), what is ATN, ATN benefits PCM, E1 (DS1) framing, T1, multiplexing, de-multiplexing, TDM... Network sharing of data High Capacity Multiplexing (HCM) Local Area Network (LAN) Wide Area Network (WAN) National network for ATM data Map of the networks, bandwidth possibilities, data transported.... Terminology, phraseology Principles and theory of networks Open Systems Interconnection (OSI) model, data links, bBlock diagram of national and international communication system in use MODEM, DTU, coding, D/A A/D conversion, modulation, base band, CCITT recommendations, quality check...
3. Purpose and Use of Network	1) Demonstrate an awareness of ATC specific requirements for networks and data communications 2) Describe basic associated software functions and application	2 2	Terminology, phraseology Types of data transported between center, packet switching, terminology, phraseology, Local Area Network (LAN), Wide Area Network (WAN) National and international network for ATM data Principles and theory of networks, sharing of Data, multiplexing, de-multiplexing

Topic	Intermediate Objectives	Level	Content
	3) Describe the different layers of the OSI model for networking	2	7 layer model, protocols Wide Area Network (WAN)
	4) Explain the purpose and use of each layer	2	
	5) Demonstrate an awareness of protocols	2	
	6) Explain the principle and use of the MAC address	2	
	7) Explain the functionality and the use of Local Area Network	2	
	8) Explain the principle of the IP addressing system	2	
	9) Explain the functionality and the use of Wide Area Network	2	
	10) Explain the purpose and principle of the HUB	2	
	11) Explain the purpose and principle of the SWITCH	2	
	12) Explain the purpose and principle of the ROUTER	2	
	13) Explain the purpose and the principle of the GATEWAY and FIREWALL	2	

4. Purpose and Use of Protocol	1) Explain the functionality and use of protocol	2	
	2) Explain the functionality and use of the IP protocol	2	
	3) Explain the functionality and use of the TCP protocol	2	
	4) Explain the functionality and use of the UDP protocol	2	
	5) Explain the functionality and use of other protocol specific to the ATM	2	
	6) Describe the purpose, functionality and use of protocol analyser	2	

5. Network Management	1) Explain the principles and the functions of network monitoring and management	2	Monitoring, pooling, SNMP, MIB.... Test and monitoring tools Protocol analyser SNMP
-----------------------	--	---	--

Topic	Intermediate Objectives	Level	Content
	2) Describe the use of the SNMP protocol	2	Display tools (open view....) Get, put, trap.... Addressing, system, MIB organisation, MIB1, MIB2.... Example of system, example of HMI used (eg. HP open view....)
	3) Explain the principle of the Management Information Base (MIB) system	2	
	4) Describe one of the network management systems used in your ATC environment	2	

3.3.19 ATM Specific Networks			
1. ATC Specific Networks and/or Applications	1) To be aware of a range of network related to ATM concepts.	0	AFTN, SITA, ACARS, ARINC, MOTNE ATN, VHF, SATCOM, AMSS International harmonisation
	2) To be aware of a range of message format used in ATM related networks.	0	
	3) To be aware of a range of international networks used for ATM	0	CIDIN, OLDI, ASTERIX, Mode S Example for countries and continents (ARTAS data, RAPNET....)
	4) List the specific interface with other countries which exists in your ATM environment	1	

2. Future Development	1) List the future developments and techniques in ATM networks	1	National and international harmonisation, evolution of Air-Ground, evolution of Ground-Ground Integrated systems, ATN inter network protocols, ATN benefits, transition, expectation
-----------------------	--	---	---

3.3.20 Data Processing (DP)			
1. Units of Measurement	1) Describe the terminology appropriate to data processing	2	Terminology, phraseology

Topic	Intermediate Objectives	Level	Content
2. Purpose and Use of Data Processing Systems	1) Explain the need for data processing systems in aviation and the national and international needs	2	Historical overview, automation, radar processing.... ICAO, national law, recording Software licensing
	2) Describe the basic principles, purpose and operation of the main data processing systems in current use	2	Radar processing (RDPS), Flight Plan Processing (FDPS, Environmental processing (ENP), other....
	3) Describe the system evolution and architecture	2	
	4) Describe, using an overall block schematic, the function and the performance of the different EDP systems in use	2	Functionalities, operational point of view, HMI, data
	5) Describe how the systems interface with other systems	2	General diagram of the interconnection of the different systems
	6) Describe basic software functions/applications	2	Input, output, operational use
	7) Describe the different Operating Systems which support your current EDP systems	2	Type of software in use....
	8) To be aware of legal requirements	0	Type of operating systems in use
	9) To be aware and have an appreciation of future developments	0	Software licensing, supplier licensing

3. System Software and Hardware Principles	1) Be aware of current operating software and hardware used in your systems	2	Driver, interfaces, languages, type of station, workstation, PC....
	2) List operating systems which support your current EDP systems		Specific systems e.g. UNIX, NT, VMS, windows, LINUX, XP

3.3.21 Radar			
1. Radar Data Processing	1) To be aware of ATC requirements	0	Resolution/quantification, correlation, rate of error, data recording, play back, label presentation, HMI
	2) Describe the functions of Radar Data Processing	2	Mosaic/multi radar tracking, display techniques, track generation

Topic	Intermediate Objectives	Level	Content
	3) Explain the principle of sectorisation	2	Sectorisation, physical sector, logical sector correlation
	4) Explain the principles of processing	2	Tracks, plots, message, format, VDF, speed vector,.... Calculation of real position, tracking principles
	5) Describe the relation and exchange between RDPS and FDPS	2	Correlation, updating of data
	6) Describe the radar data inputs/outputs and messages	2	Format, content of messages
	7) Explain the need for international harmonisation	2	Exchange of information. Harmonisation of format, data transmission
	8) To be aware of the redundancies and back up system in use	0	Block diagram, primary RDPS, fallback, redundancy, monitoring, by pass, switching possibilities
	9) To be aware of future developments	0	

2. Warning systems	1) Describe the need for warning systems	2	Conflict alert, (short-term, medium conflict alert), altitude warning (Minimum Safe Altitude Warning)....
	2) Explain the principle and use of conflict alert systems	2	
	3) Explain the principle and use of altitude warning system	2	
	4) To be aware of on board warning systems	0	TCAS

3. System in your centre	1) Describe, with a block diagram, the system in use	2	Description of hardware and software in use, redundancy, RCMS, HMI
	2) Visit system	0	Visit

3.3.22 Flight Plan Processing			
1. Flight Data Processing (FDP)	1) To be aware of ATC requirements	0	Flight strip production
	2) Explain the functions of FDP	2	Flight plan life cycle

Topic	Intermediate Objectives	Level	Content
	3) Describe the inputs and outputs, and the distribution of flight plan data	2	Electronic strips, strip printing, data exchange, communication
	4) Describe the relation and exchange between FDPS and RDPS	2	Flight Plan, code/call sign correlation, updating
	5) Describe the basic software functions/applications	2	Update of data, correlation Operating system, programming languages, rules

2. National and International Exchanges	1) Explain the need for international exchanges and flow control	2	Flow control (CFMU/IFPS) Flight progress monitoring
	2) Describe the principle of dialogue between centres	2	OLDI, messages, ABI, ACT, LAM, REV, MAC, PAC....
	3) State the networks used to exchange flight plan data between centres	1	AFTN, CIDIN, X25 and other national and international networks
	4) To be aware of the redundancies and back up system in use	0	Block diagram, redundancy, monitoring, by pass

3. System in Your Centre	1) Describe, with a block diagram, the system in use	2	Description of hardware and software in use, redundancy, RCMS, HMI
	2) Visit system	0	Visit

3.3.23 Display			
1. Operational Display Systems	1) Explain the main information which must be presented on controller displays	2	Maps, flights, labels, vector, ADF, strips, meteorological and environmental data, setup, zoom, windows, frequencies, status....
	2) Describe the different display technologies	2	Random scan/raster scan, 2k/2k screen, TV, cathodic, plasma, (SONY, Barco....)
	3) Describe, using an overall block diagram, the display system in use in your country	2	Data distribution to display, redundancy, network, ATCO position, sectors....
	4) Describe the main components of the display system	2	Workstation Common Graphic Display Interface, graphics accelerator, monitor, other secondary screen
	5) Explain the local radar processing and redundancy	2	X-client/X-server, local RDPS processing

Topic	Intermediate Objectives	Level	Content
	6) Describe software applications (country specific)	2	Backup procedure, procedure, restriction, manual correlation, maps, SMC possibilities Operating system in use (NT, UNIX, Windows, LINUX. XP...., programming languages (C, C++, ADA...), X windows....

2. Human Machine Interface (HMI)	1) To be aware of HMI aspects	0	HMI possibilities, login, settings
	2) State the main data which is displayed	1	Aircraft, labels, maps, frequencies, entry windows, ... Familiarisation with simulator

3. System in Your Centre	1) Describe, with a block diagram, the system in use	2	Description of hardware and software in use, redundancy, RCMS, HMI, photo
	2) Visit system	0	Visit

3.3.24 On line and Environmental Data			
1. Environmental Data, On Line Data	1) State the different environmental data	1	System status/back-up systems, runway in use, transition level, MAPS, dangerous area, military restriction, clock, Meteorological data
	2) State the sources of the environmental data	1	Notice to Airmen (NOTAM)
	3) Describe, using an overall block diagram, the system in use in your country to process and distribute the environmental data	2	Interfacing with adjacent centres Distribution network
	4) Describe the system in use to display environmental data	2	Explain your own system

Topic	Intermediate Objectives	Level	Content
2. System Monitoring and Control	1) Explain the principles and the functions of a remote system monitoring and control	2	SMC position, equipment monitored, technical and operational procedures for the System Monitoring and Control.....
	2) Describe how to collect remote data and what tools and HMI are used to display the data	2	Protocol SNMP, SNMP agent, addressing system, MIB, pooling, network, other protocols.... Tool in use (Open View....)
	3) Describe the system monitoring and control in use for the radar processing	2	Organisation, system status/back-up systems, control and monitoring possibilities, demo of the HMI, procedure
	4) Describe the system monitoring and control in use for the display system	1	identify
	5) Describe the system monitoring and control in use for the flight plan processing	2	Organisation of the supervision Centralised SMC position, other organisation, responsibilities....
	6) State other system monitoring and control in use	1	Integrated monitoring and control, Nav aids monitoring, radar, power

3. System in Your Centre	1) Describe, with a block diagram, the system in use	2	Organisation of the supervision, monitoring and control Centralised SMC position, other organisation, responsibilities.... Description of hardware and software in use, redundancy, RCMS, HMI
	2) Visit system	0	Visit

3.3.25 Facilities

1. Units of Measurement and Terminology	1) Describe the terminology and units of measurement and terminology appropriate to facilities and logistics	2	Glossary
---	--	---	----------

Topic	Intermediate Objectives	Level	Content
2. Purpose and Use of Facilities and Logistics	1) Explain the need for specific facilities and logistic systems for ACC.	2	Historical overview using an overall block diagram
	2) To be aware of the function and performance of logistic and support equipment	0	Power supply, air conditioning The performance of the support systems
	3) Describe, using an overall block diagram, the function and the performance of the systems in use	2	Terminology, phraseology

3.3.26 Power Supply

1. Power Distribution	1) Describe the main features of the current power supply systems	2	Power, input, output, diagram of the system
	2) To be aware of safety regulations and procedures	0	Need to have an uninterrupted system, without perturbation (spikes, harmonics....)
	3) Describe the power distribution system at a typical site	2	Block diagram of the power distribution, redundancy (commercial power, UPS, genset)

2. Uninterrupted Power Supply	1) Explain the principle of Uninterrupted Power Supply (UPS)	2	Block diagram of the UPS, rectifier, battery, inverter, by pass....
	2) Explain the importance of Uninterrupted Power Supply (UPS) systems		Operational and technical point of view, organisation of maintenance, monitoring, redundancy

3. Precaution and Safety	1) Explain the precautions to be taken when working on equipment	2	High voltage, earthing techniques, personal safety, precautions to take when handling batteries, power and high voltage equipment....
	2) State any appropriate ICAO or local regulations in force	1	Company rules
	3) State the appropriate safety rules	1	First aid certification
	4) Explain the emergency systems in use in your environment.	2	Redundancy, batteries and emergency generators, by pass Site visit

Topic	Intermediate Objectives	Level	Content
3.3.27 Air Conditioning			
1. Air Conditioning	1) Describe, using an overall block diagram, the function and the performance of current air conditioning systems in use	2	Air conditioning, water cooling, system management, humidity
	2) State the importance and criticality of maintaining a controlled environment	1	Importance of good environment
	3) State the appropriate safety rules	1	Importance of cooling system for electronic equipment, gas handling
	4) Explain the emergency system in use in your environment	2	Redundancy, by pass
2. Visit	1) Visit of air conditioning equipment	0	Visits to air conditioning equipment
3.3.28 Monitoring			
1. Monitoring of Facility Equipment	1) State the importance and criticality of maintaining a controlled environment	1	Operational monitoring and control of power supply
	2) Describe the methods employed to control the equipment	2	Operational monitoring and control of air conditioning ATSEP organisation
3.3.29 Electromagnetic Compatibility			
1. Electro-Magnetic Protection	1) State the different factors that can disturb equipment	1	Electrostatic, lightning, motors, radio waves....
	2) Describe how these factors can affect the electronic equipment	2	Static discharge, circuit break down, computer problems
	3) State what can be done to protect building and equipment	1	Earth probe, faraday cage, filter....

Phase Two Qualification Training

The Phase Two Qualification Training will provide the ATSEP with an in-depth knowledge and appropriate skills needed in the CNS/ATM discipline to be pursued.

Following the completion of Phase One Basic Training, the ATSEP will be trained in a specialized discipline such as: Communications, Navigational Aids (Nav aids), Surveillance or Data Processing. The ATSEP may receive the training for more than one speciality. The ANS provider or state organization determines the number of ATSEP to be trained in each speciality.

Each discipline in the Phase Two Qualification Training has been developed in a separate multi part chapter. While the content elements of each chapter is generic, it does not prevent the state organization from including examples, to illustrate real life situations or to use systems/equipment that are available to enhance the learning activities.

This training phase is important for the ATSEP, since it makes the link between the general knowledge received in the Phase One Basic Training and the specific equipment knowledge and skills acquired in the Type Rating training. In Phase Two Qualification Training, the knowledge, skills and attitudes needed for each of the specialities, will be developed and their applicability will be emphasized. Safety aspects of the personnel (ATSEP), and of the equipment/systems are covered for each discipline.

In order for the ATSEP to perform their role and duties, it is important that they understand each of the essential system components within their discipline.

TRAINING FOR EACH QUALIFICATION

Introduction

Each qualification always includes the corresponding domain. In addition, it may include specific areas from the other domains. The table below gives an overview of this distribution.

Qualification training for	Domain	Subjects
Communication	Communication	All
	Safety	All
Navigation	Communication	Data
	Navigation	All
	Safety	All
Surveillance	Communication	<ul style="list-style-type: none">▪ Data▪ Transmission Path
	Surveillance	All
	Safety	All

Qualification training	Domain	Subjects	Topics	Sub-topics	
Data Processing	Communication	<ul style="list-style-type: none"> ▪ Data ▪ Transmission Path ▪ Recorders 	All All Legal Records	4.10 (1) Regulations 4.10 (3) Digital

Chapter 4

Communication Systems

Introduction

Communication systems provide a means of relaying essential information for the safe and orderly operation of the ANS. They are governed by international and national standards. Nowadays, communication means a lot more than radio transmitters and receivers; it also includes communication protocols, networks, types of medium, recorders and the safety aspects. The ATSEP has to understand the impact of their work on the user and on the overall ANS communication system.

Training Objective

Students shall describe the communication systems and equipment of their national ANS provider. Since communications are universal, it is very important that the ATSEP understand the purpose of each system/equipment and the technical specifications (power, frequencies, connections, etc....).

This chapter has been divided into 12 parts and each part addresses a specific aspect of communications.

Condition: In a laboratory environment, given an exposure to a specific communication equipment/system along with the appropriate and pertinent training material, reference documentation, test equipment and tools.

Performance: The trainee will be able to perform the:

- preventive maintenance;
- corrective maintenance;
- calibration;
- certification.

Standard of accomplishment: All maintenance should be performed as per the approved standards and procedures.

This chapter includes twelve (12) parts:

- 4.1 Air-Ground
- 4.2 Ground-Ground
- 4.3 Intro to Networks
- 4.4 National Networks
- 4.5 European Networks
- 4.6 Global Networks
- 4.7 Protocols
- 4.8 Lines
- 4.9 Specific Links
- 4.10 Legal Recorders
- 4.11 Safety Attitudes and Functional Safety
- 4.12 Health and Safety

Chapter 4 Communication Systems	The students should be able to:		
Topic and Subtopic	Objectives	Level	Content
4.1 Voice - Air Ground			
1. Transmission/ Reception	1) Perform typical measurements on a transmitter	3	Frequency (single carrier, offset carrier), modulation, channel spacing, output power, SWR
	2) Analyse and troubleshoot a generic radio transmitter	4	Noise, intermodulation, harmonics
	3) Design and interpret the block diagram of a transmitter	5	Characteristics (modulation, single carrier, channel spacing) functionalities
	4) Perform typical measurements on a receiver	3	Frequency, modulation, channel spacing, sensitivity, selectivity
	5) Analyse and troubleshoot a generic radio receiver	5	Noise, intermodulation, harmonics
	6) Design and Interpret the block diagram of a receiver	5	Characteristics (modulation, single carrier, channel spacing, sensitivity, selectivity) functionalities
	7) Interpret remote monitoring and control systems information	5	PTT, squelch, station information/control functions, SWR, field strength, data of equipment, line quality (S/N)
2. Radio Antenna Systems	1) Explain and describe antenna parameters	2	Impedance, polar diagram, bandwidth, polarisation types of antennas (HF, VHF, UHF, LF)
	2) Analyse the coverage of the radio system	4	Impedance, polar diagram, polarisation, types of antennas (HF, VHF, UHF)
	3) Calculate propagation according to various conditions	3	Output power, geographic, meteorological, ionosphere influences, day and night (HF, VHF, UHF)

Topic	Intermediate Objectives	Level	Content
	4) Appreciate criticality of the conditions	3	Output power, geographic, meteorological, ionosphere influences, day and night (HF, VHF, UHF)
	5) Calculate the values of the elements of a simple generic antenna system	3	Filters, combiners, RF relays, multi-cavity system
	6) Check the conformity of a system to ITU	3	ITU (HF, VHF, UHF) Ref ICAO Annex 10
	7) Check the conformity of a system to national regulations	3	National regulations (HF, VHF, UHF)
	8) Identify and measure cross modulation	3	Cross modulation, measuring tools and methods
	9) Detect and analyse disturbances	5	Spectrum analyser, scanner, noise, figure, BITE

3. Voice Switch	1) Describe and interpret switching functionalities with a block diagram	5	General architecture, digital, analogue, multiplex types, PCM30
	2) Explain the principles of non blocking switches	2	Advantages, disadvantages, delays (digital)
	3) Describe the signal processing all along the chain	2	Signal tracing treatment, protocols (a few), data flow

4. Controller Work Position	1) Describe the most common features of a controller working position	2	Frequency selection, emergency, station selection, coupling, microphone (noise cancelling), headset, loudspeaker, short time recording, footswitch, PTT)
-----------------------------	---	---	--

5. Radio interfaces	1) List and describe the different types of interfaces	2	Internal, external, phantom keying, in band signal
---------------------	--	---	--

6. Digital Voice Communication	1) Explain the latest development and projects in voice communication	2	e.g. Digital radio, VDL mode 3 Ref.: ICAO Annex 10
--------------------------------	---	---	---

4.2 Voice - Ground Ground			
1. Interfaces	1) Describe the different types of interface	2	Analogue (2, 4, 6 and 8 wires), digital (ISDN; 64Kb, 2MB)

Topic	Intermediate Objectives	Level	Content
	2) Explain the advantages and disadvantages of each type	2	Analogue (2, 4, 6 and 8 wires), digital (ISDN; 64Kb, 2MB)
	3) Operate measuring equipment	3	dB meters, level meters, generators, sniffer, special e.g. 2MB

2. Protocols	1) Operate standard protocol analysers	3	MFC R2 (EUROCONTROL), ATS QSIG (Re-routing), impulse dialling and DTMF dialling, ISDN
	2) Decode a signal coded according to the standard protocols	3	MFC R2 (EUROCONTROL), ATS QSIG (Re-routing), impulse dialling and DTMF dialling, ISDN
	3) Analyse a signal coded according to the standard protocols	4	MFC R2 (EUROCONTROL), ATS QSIG (Re-routing), impulse dialling and DTMF dialling, ISDN
	4) Decode and analyse a signal coded according to the national protocols	4	National protocols

3. Switch	1) State that Ground-Ground switches are based on the same techniques as Air-Ground switches.	1	See 4.1 (3)
	2) Describe the most commonly used functionalities of PABX	2	General architecture, digital, analogue, multiplex types, PCM30
	3) Describe and analyse conversion analog-digital, digital-analog	4	General architecture, analog-digital-analog, specific aviation requirements (codec, rate, receiver architecture)

4. Controller Working Position	1) Describe the most common features of a controller working position and the HMI	2	Reference: VCS procurement guidelines (WD-discom)
--------------------------------	---	---	---

4.3 Data - Introduction to Networks			
1. Types	1) Define LAN and WAN	1	Architectures, size of the segments, length of the systems, quality of service

Topic	Intermediate Objectives	Level	Content
	2) Design network, matching the quality of service requirements	4	Redundancy, bandwidth, BER, time response, data security
2. LAN	1) Analyse the features of a LAN network	4	Routing scheme, rate, internal networking, routers, bridges, gateways, hub, modems, switches, firewalls
	2) Integrate adequately components into a LAN	4	Network management
3. WAN	1) Analyse the features of a WAN network	4	Routing scheme, rate, internal networking, routers, bridges, gateways, hub, modems, switches, firewalls
	2) Integrate adequately components into a WAN	4	Network management
4. Measuring Tools	1) Operate the usual set of network measuring or monitoring tools to find the values of the main parameters	3	Data analyser (sniffer), net scout
5. Monitoring Tools	1) Analyse the traffic	4	Data analyser (sniffer), net scout
6. Trouble Shooting	1) Troubleshoot a network	5	Broken lines, unusable network components, overload, integrity problems
4.4 Data- National Networks			
1. Proper Networks	1) Describe the characteristics of the networks	2	National network(s), interoperability
2. Surrounding Networks	1) Be aware of the existence of other national networks	0	Military, PTT, airlines e.g. SITA, ARINC etc.
4.5 Data- International Networks			
1. Emerging	1) Be aware of emerging International networks	0	
2. In Use	1) Describe the characteristics of the international networks in your area.	2	Users and data, architectures, quality of service (CIDIN, OLDI, CFMU-RCA, AIS, (EAD) networks)

Topic	Intermediate Objectives	Level	Content
3. Hands On	1) Analyse traffic of these networks.	4	Proprietary analysers, system specific analysers (CIDIN, OLDI, CFMU-RCA, AIS (EAD) networks)
	2) Troubleshoot problems, at a national level, on a segment of these networks	5	Broken lines, unusable network components, overload, integrity problems

4.6 Data- Global Networks

1. List and Standards	1) List the global networks and the standards on which they are based	1	ICAO for AFTN, ICAO for ATN (SARPS-ATM package 1), FANS 1 and FANS A for ACARS applications (SITA and ARINC)
-----------------------	---	---	--

2. Description	1) Describe the characteristics of the AFTN, MOTNE, SITA, ARINC networks	2	Users and data, architectures, quality of service
----------------	--	---	---

3. Hands on	1) Analyse traffic of the AFTN, MOTNE, SITA, ARINC networks	4	Using the appropriate tools
	2) Troubleshoot problems at a national level on a segment of AFTN, MOTNE, SITA, ARINC networks	5	Broken lines, unusable network components, overload, integrity problems

4. ATN Architecture	1) Describe the architecture of the ATN	2	Air-Ground sub networks, ground-ground sub networks, airborne networks
---------------------	---	---	--

5. ATN Air Ground	1) Describe the air-ground sub networks	2	VDL (mode 2, mode 3, mode 4), HDL, AMSS, SSR mode S, SATCOM
-------------------	---	---	---

6. ATN Ground Ground	1) State that the ground-ground sub networks are composed of many private or public components	1	PTT, commercial telecom providers, ARINC
----------------------	--	---	--

7. ATN On Board the Aircraft	1) Be aware of the existence of ATN sub networks inside the aircraft	0	SATCOM Note: wait further development for higher level objective
------------------------------	--	---	---

8. ATN Applications	1) List the main communication application over ATM System	1	CPDLC, DLC
---------------------	--	---	------------

Topic	Intermediate Objectives	Level	Content
4.7 Data- Protocols			
1. Fundamental Theory	1) Explain the principles of layers	2	Differences between layers
	2) Explain the principles of the addressing strategy	2	Routing strategies, masks-subnets
	3) Explain the principles of the routing strategy	2	Routing tables, point to point, connection less, name servers, priorities, fault tolerance, management
2. General Protocols	1) Describe and decode the general protocols	3	TCP/IP, X25, LAPB
	2) Analyse and interpret the general protocols	5	TCP/IP, X25, LAPB
3. Specific Protocols	1) Describe and decode the specific protocols	3	ACARS, ATN
	2) Analyse and interpret the specific protocols	5	ACARS, ATN
4. Met Data Protocol from Satellite	1) Describe and decode the met data protocol	3	SADIS
4.8 Transmission Path - Lines			
1. Providers	1) State who are the local telecom providers and the service characteristics	1	Type of lines, rules, type of services, global national organisation and rules
2. Lines Theory	1) List, describe and calculate parameters of a line	3	Equation, attenuation, impedance, S-parameters, Smith diagram, bandwidth, HF specifics (dipoles, multipoles)
3. Digital Transmission	1) List, describe and calculate parameters for digital transmission	3	Signal definition, Fourier theory, (spectrum), signal processing (sampling, etc.) bandwidth, carrier, modulation, noises, S/N, delays, group delay, line quality (signal distortion, rate of failure), transmission speed

Topic	Intermediate Objectives	Level	Content
4. Types of Lines	1) Describe and calculate the typical parameters of lines	3	Copper wires (twisted pairs, symmetrical cables) Optic fibres (mono or multi modes, connectors, splitter) Co axial (attenuation, losses, bending, characteristic impedance)
	2) Choose the appropriate type of line for a given specific application	3	Bandwidth, noise immunity, availability, proximity, duality of supplier, installation cost, running cost
	3) Measure the typical parameters of lines	3	Impedance, insulation, signal level, signal generator, reflectometer, vector analyser, spectral delay
	4) Analyse and troubleshoot a line installation	5	Signal generator, signal level, automatic line analysers, BITE

4.9 Transmission Path - Specific Links

1. Optical	1) Describe the parameters of an optical link	2	Frequency spectrum
	2) Explain the performances and the limitations of an optical link	2	Distances, weather conditions, obstruction, EMI immunity

2. Microwave Link	1) Describe the parameters of an microwave link	2	Carrier frequency, type of modulation, theory of fresnel, loss, atmospheric influences
-------------------	---	---	--

3. Satellite	1) Describe the parameters of a satellite link	2	Uplinks, downlinks, antennas, footprint, delays, atmospheric influences
--------------	--	---	---

4.10 Recorders - Legal Recorders

1. Regulations	1) Explain the international regulations	2	ICAO regulations (recording and reproducing)
	2) Explain the national regulations	2	Appropriate national regulations
	3) Explain the company regulations	2	Store tapes, access to recording and reproducing room, time to store information (overwrite/erase voice or data), procedure to reproduce information

Topic	Intermediate Objectives	Level	Content
2. Analogue	1) Explain the principles of analogue recording and reproducing	2	Storage media (tape), duration tape, number of tracks, time synchronisation, noise reduction
	2) Analyse and troubleshoot the analogue recording and reproducing	5	Replace tapes, calibration, cleaning heads, search information

3. Digital	1) Explain the principles of digital recording and reproducing	2	Storage media (tape, optical and magnetic disc), a/d – d/a converters, frequency range (300...3400 Hz), channel capacity, time synchronisation, connection to a networks
	2) Analyse and troubleshoot the digital recording and reproducing	5	Search information, change storage media

4.11 Safety Attitude & Functional Safety

1. Safety Attitude	1) State the role of ATSEP in safety management routines and in reporting processes	1	Safety assessment documentation related to communication system, safety reports and occurrences, safety monitoring
--------------------	---	---	--

2. Functional Safety	1) Describe the implications of functional failures in terms of exposure time, environment, effect on controller and effect on pilot	2	Total or partial, premature or delayed operation, spurious, intermittent, loss or corruption of data, missing or incorrect input or output Ref: EATMP safety policy, safety policy and implementation, other national and international policy
----------------------	--	---	---

4.12 Health and Safety

1. Hazard Awareness	1) Be aware of potential hazards to health and safety generated by communication equipment	0	Mechanical hazards, electrical hazards (HV, EMI), chemical hazards
2. Rules and Procedures	1) State applicable international requirement	1	Relevant international documents
	2) State any applicable legal national requirement	1	Relevant national documents

Topic	Intermediate Objectives	Level	Content
	3) State safety procedure for the persons working on or near a communication equipment	1	Isolation (clothing, tools) fire extinguisher types, safety man presence, safety interlocks, isolating switches, security of the site, climbing procedures
3. Practical Situations	1) In a practical situation, apply and demonstrate the procedures and techniques to be followed	3	e.g. Changing wave guide, replacing fuses or boards, start up/ shut down a station, climbing procedures
4. Resuscitation Techniques	1) Apply and demonstrate resuscitation techniques	3	First aid, rescue procedures, resuscitation

Chapter 5

Radio Navigation Aids

Introduction

Radio Navigation Systems provide a vital role in the operation of an ANS for approach and enroute navigational information essential for the safe and orderly operation of the ANS. They are governed by international and national standards, in particular by Required Navigation Performance (RNP). The ATSEP has to understand the impact of his work on the user and on the overall ANS Radio Navigation Aids system.

Training Objective

Students shall describe the Radio Navigation Aids systems and equipment of their national ANS provider. It is very important that the ATSEP understand the purpose of each system/equipment, the technical specifications and the impact on the service of the users.

As there are many aspects to Radio Navigation Aids, this chapter has been divided into 20 parts and each part addresses a specific aspect of navigation aids.

Condition: In a laboratory environment, given exposure to specific radio navigation equipment, along with the appropriate and pertinent training material, reference documentation, test equipment and tools.

Performance: On the Radio Navigation Aids Systems covered in this chapter, the learner will perform:

- preventive maintenance;
- corrective maintenance;
- calibration;
- certification.

Standard of accomplishment: All maintenance should be performed as per the approved standards and procedures.

This chapter includes twenty (20) parts:

- 5.1 NAV Concepts
- 5.2 NDB/Locator
- 5.3 VDF/DDF/IDF
- 5.4 VOR
- 5.5 DME
- 5.6 ILS
- 5.7 MLS
- 5.8 GNSS1
- 5.9 GBAS
- 5.10 SBAS
- 5.11 ABAS
- 5.12 Modernised GPS
- 5.13 Galileo
- 5.14 GNSS2
- 5.15 On Board Navigation Architecture
- 5.16 Display Systems

- 5.17 Inertial Navigation
- 5.18 Vertical Navigation
- 5.19 Safety Attitude and Functional Safety
- 5.20 Health and Safety

Topic	Intermediate Objectives	Level	Content
Chapter 5 Radio Navigation Aids	The students should be able to:		

5.1 NAV Concepts			
1. Operational Requirements	1) State, define and explain the main performance of a navigation system	2	Accuracy, Circular Error Probable (CEP), RMS, 2DRMS, Spherical Error Probable (SEP), etc., integrity, availability, continuity of services, coverage, robustness, Time To First Fix (TTFF), etc.
	2) Describe and explain the links between performance and type of navigation system	2	Sole means, primary means, supplementary means
	3) Describe and explain the dependency of performance and the phases of flight	2	ICAO standards table

2. Required Navigation Performance (RNP)	1) State, define and explain the RNP concept	2	Risk of collision, Target Level of Safety (TLS), confinement area
	2) Describe the standard values of RNP	2	RNP4, RNP1, ICAO and Eurocontrol tables
	3) Be aware of the potential extension of the RNP concept	0	Required Communication Performances (RCP), Required Surveillance Performances (RSP), Required Global Performances (RGP)

3. Area Navigation Concept (Rnav)	1) State, describe and explain the navigation area concept	2	ICAO and Eurocontrol documents, operational impact on national and transition airspace
	2) Describe the standard values of Rnav	2	Basic-Rnav (B-Rnav) and precision Rnav (P-Rnav)
	3) Describe the implementation plans for Rnav	2	ICAO plan, regional plan, national plan

5.2 Ground Based Systems - NDB/Locator			
1. Use of the System	1) Explain the operational use of NDB	2	En route, terminal area, procedures
	2) Theorise the principles of NDB	5	Relative bearing, measuring method

Topic	Intermediate Objectives	Level	Content
	3) Explain the advantages of NDB	2	Simplicity, cost, coverage
	4) Explain the disadvantages of NDB	2	Lack of accuracy, lack of integrity, sensitivity to interference
	5) Describe the current situation	2	Density of NDB in use in Europe, percentage of equipped aircraft
	6) Describe the role of NDB according to European navigation strategy	2	NDB not part of Rnav
2. Ground Station Architecture	1) Draw and explain the block diagram of a generic NDB ground station	2	Electronic cabinet, antennas, power supply, remote controls and monitoring
	2) Design a NDB station according to operational requirements	4	Coverage, identification code, VOR backup, double beacon approach
3. Transmitter Sub System	1) Analyse main signal parameters	4	Carrier frequency stability, output power, controls
	2) Perform the typical measurements on the main signal parameters	3	Power measurements, spectrum measurements
4. Antenna Sub System	1) Explain and describe antenna parameters for NDB	2	Impedance, polar diagram, polarisation, types of antennas
	2) Calculate the interface between power stage and the antenna (tuning coil)	3	Standing Waves Ratio (SWR), radiated power
5. Implementation	1) Verify the impact of the requirements on the choice of the ground station location	3	En route, terminal requirements procedures
	2) Check the conformity of the system to ITU	3	ITU regulation, ICAO Annex 10
	3) Check the conformity to national regulations	3	National regulations
6. On Board Equipment	1) Describe the on board equipment (ADF) and the current procedures	2	Receiver, antenna, pilot check
	2) Describe the various HMI	2	ADF indicator, RMI, HIS, ND

Topic	Intermediate Objectives	Level	Content
7. Compliance with Standards	1) Define the global performance	1	Coverage, accuracy, availability of the system, integrity, continuity
	2) Perform typical measurements	3	Spectrum analysis, modulation, output power, ID code
	3) Calibrate	5	Flight inspection
	4) Troubleshoot	5	Carrier frequency deviation, depth of modulation, lack of power, harmonics ratio

5.3 Ground Based Systems - VDF/DDF/IDF			
1. Use of the System	1) Explain the operational use of DF	2	Terminal and approach procedures, emergency, back-up
	2) Describe the user HMI	2	Indication on radar picture, DF indicator
	3) Theorize the principles of DF	5	Bearing, measuring method (standard, Doppler, interferometry)
	4) Explain the advantages of DF	2	Simplicity, cost
	5) Explain the disadvantages of DF	2	Sensitivity to interference
	6) Describe the current situation	2	Density and types of DF in use in your area, effective use of DF
2. VDF/DDF Equipment Architecture	1) Draw and explain the block diagram of a VDF/DDF equipment	2	Electronic cabinet, antennas, power supply, remote controls and monitoring
	2) Design a VDF/DDF equipment according to operational requirements	4	Coverage, accuracy
3. Receiver Sub System	1) Design main signal parameters	4	Frequency band (UHF, VHF)
	2) Perform typical measurements on the receiver	3	Frequency, channel spacing, sensitivity, selectivity
4. Antenna Sub System	1) Explain and describe antenna parameters for VDF/DDF	2	Impedance, polar diagram, polarisation, types of antennas
	2) Design protection areas	4	Obstacles, Annex 10 and 14, manuals

Topic	Intermediate Objectives	Level	Content
5. Monitoring and Control Sub System	1) Describe and explain which parameters are used for the monitoring	2	Noise figure, stability of measurement
	2) Check the operational status of the monitor system	3	BITE, system status e.g. watchdog
	3) Troubleshoot wrong bearing instructions	3	Readjust antenna systems

6. Implementation	1) Verify the impact of the requirements on the choice of the VDF/DDF location	3	Protection of receivers
	2) Check the conformity of the system to ITU	3	ITU regulation, ICAO Annex 10
	3) Check the conformity to national regulations	3	National regulations

7. Compliance with Standards	1) Define the global performances	2	Accuracy, coverage, Annex 10 recommendations
	2) List VHF/UHF receiver procedures	1	
	3) Calibrate the system	5	Flight inspection

5.4 Ground Based Systems - VOR

1. Use of the System	1) Explain the operational use of VOR	2	En route, terminal area, procedures
	2) Theorize the principles of the CVOR	5	Bearing information, phase measurements methods
	3) Explain the advantages of VOR	2	Type of information (azimuth), accuracy, integrity, suitable for a network of fixed routes
	4) Explain the disadvantages of VOR	2	Multipath, sensitivity to interference, limited coverage, not ideal for free routes, accuracy depending on distance
	5) Justify and theorize the DVOR versus the CVOR	5	CVOR, DVOR, signal broadcast differences, bearing information
	6) Describe the current situation	2	Density of CVOR and DVOR in use in you area.

2. Ground Station Architecture	1) Draw and explain the block diagram of a CVOR ground station	2	Electronic cabinet, antenna system, power supply, remote controls and monitoring
	2) Design a CVOR station according to operational requirements	4	Coverage, identification code

Topic	Intermediate Objectives	Level	Content
3. Transmitter Sub System	1) Analyse main signal parameters for a CVOR	4	Carrier frequency stability, output power, signals generated
	2) Analyse main signal parameters for a DVOR	4	Output power, signals generated
	3) Perform the typical measurements on the signals by using standard equipment	3	Power measurements, spectrum measurements, modulation measurements
4. Antenna Sub System	1) Explain and describe the generic radiated signals required for CVOR	2	Patterns antennas, distribution circuits, standard implementations
	2) Explain and describe the generic radiated signals required for DVOR	2	Patterns antennas, distribution circuits, standard implementations
	3) Analyse the interface between power stage and the antenna	4	Standing Wave Ratio (SWR), radiated power
	4) Analyse the most typical signal errors due to the antenna	4	Error expression components
5. Monitoring and Control Sub System	1) Describe and explain which parameters are used for the monitoring	2	Near-field monitor, BITE
	2) Check the operational status of the monitor system	3	BITE, system status e.g. watchdog
	3) Troubleshoot wrong bearing indications	5	Readjust antenna systems
6. Implementation	1) Verify the impact of the requirements on the location and the type of the ground station	2	En route, terminal requirements procedures
	2) Check the conformity of the system to ITU	3	ITU regulation, ICAO Annex 10
	3) Check the conformity to national regulations	3	National regulations
7. On Board Equipment	1) Describe the on board equipment	2	Antenna, receiver, (MMEL/RNP)
	2) Describe the various HMI	2	CDI, RMI, HIS, ND, PFD
	3) Describe how the VOR information is used on board	2	Single VOR, VOR-VOR, approach procedures, manual mode, automatic mode

Topic	Intermediate Objectives	Level	Content
8. Compliance with Standards	1) Define the global performance criteria for CVOR and DVOR	1	Coverage, accuracy, availability of the system, integrity, continuity
	2) Perform typical measurements	3	Spectrum analysis, modulation, output power, ID code
	3) Calibrate	4	Flight inspection
	4) Troubleshoot	5	Carrier frequency deviation, depth of modulation, lack of power, harmonics ratio

5.5 Ground Based Systems - DME			
1. Overview	1) Describe the measurements	2	Distance, time measurement
	2) Describe the basic principle of the system	2	A/C interrogation ground reply, interrogation stagger, station frequency
	3) Explain the TACAN equipment and the VORTAC configuration	2	DME compatible, amplitude modulated at 135Hz and 15Hz bearing information
	4) Explain the frequency spectrum and channel spacing allocated	2	See Annex 10, links to other navigation systems

2. Use of the System	1) Explain the operational use of DME	2	En route, terminal area, procedures, instrument approaches, multi DME navigation
	2) Theorize the principles of the DME/N	5	Pulse carrier modulation, coding principles, channels definitions
	3) Explain the advantages of DME	2	Accuracy, integrity
	4) Explain the disadvantages of DME	2	Saturation level, minimum interrogation number, sensitivity to interference, limited coverage
	5) Justify and theorize the DME/N versus the DME/P	5	Technical differences
	6) Describe the current situation	2	Density of DME/N and DME/P in use in your area
	7) Describe the role of DME according to your ANS Policy	2	Part of the Rnav concept

Topic	Intermediate Objectives	Level	Content
3. System Architecture	1) Describe air ground link	2	Elements of the avionics systems, nature of air-ground and ground-air transmissions
4. Ground Station Architecture	1) Draw and explain the block diagram of a DME ground station	2	Electronic cabinet, antenna system, power supply, remote controls and monitoring
	2) Design a DME station according to operational requirements	4	Coverage, identification code
5. Transmitter Sub System	1) Define main signal parameters for a DME	4	Carrier frequency stability, output power, signals generated
	2) Perform the typical measurements on the signals by using standard equipment	4	Power measurements, spectrum measurements, modulation measurements
6. Antenna Sub System	1) Explain and describe the generic radiated signals requirements for DME	2	Patterns antennas, distribution circuit, standard implementations
	2) Analyse the interface between power stage and the antenna	4	Standing Wave Ratio (SWR), radiated power
	3) Analyse the most typical signal errors due to the antenna	4	VSWR
7. Monitoring and Control Sub System	1) Describe and explain which parameters are used for the monitoring	2	BITE, power, interrogation rates
	2) Check the operational status of the monitor system	3	BITE, system status e.g. watchdog
	3) Troubleshoot error indications	5	Readjust antenna systems, replace faulty LRU
8. Implementation	1) Verify the impact of the requirements on the location and type of the ground station	2	En route, terminal requirements procedures
	2) Check the conformity of the system to ITU	3	ITU regulation, ICAO Annex 10
	3) Check the conformity to national regulations	3	National regulations

Topic	Intermediate Objectives	Level	Content
9. On Board Equipment	1) Describe the on board equipment	2	Antenna, receiver; (MMEL/RNP)
	2) Describe the various HMI	2	CDI, RMI, HIS, ND, PFD
	3) Describe how the DME information is used on board	2	Single DME, multi DME navigation (rho rho), approach procedures, manual mode, automatic mode

10. Compliance with Standards	1) Define the global performance criteria for DME	2	Coverage, accuracy, availability of the system, integrity, continuity
	2) Perform typical measurements	3	Spectrum analysis, modulation, output power, ID code
	3) Calibrate	4	Flight inspection
	4) Troubleshoot	5	Carrier frequency deviation, depth of modulation, lack of power, harmonics ratio

5.6 Ground Based Systems - ILS

1. Use of the System	1) Explain the operational use of ILS	2	Approach and landing procedures, localiser and glide path
	2) Theorize the principles of ILS	5	Azimuth and elevation by DDM measurements, dipole arrays, localiser and glide path beam construction, 90-150 Hz modulation, multiple course indications, runway offset arrangements,
	3) Explain the advantages of ILS	2	Type of information, accuracy, integrity
	4) Explain the disadvantages of ILS	2	Only 40 channels, no segmented paths of approach, beam corruption due to multipath
	5) Describe the current situation	2	Different operational category depending on weather, equipment and airport facilities

2. Ground Station Architecture	1) Draw and describe all components of ILS	2	Location of the antennas and the shelters
	2) Describe the special performance of the antenna array	2	Location of critical and sensitive area

Topic	Intermediate Objectives	Level	Content
	3) Draw and explain the block diagram of LLZ, GS, OM, MM and FFM	2	Electronic cabinet, antennas, power supply, remote controls and monitoring
3. Transmitter Sub System	1) Analyse main signal parameters for LLZ, GS, OM and MM	4	Carrier frequency, output power, signals generated
	2) Draw and explain the block diagram of the transmitter	4	Synthesizer, modulator, power amplifier, control coupler, RF-Change over
4. Antenna Sub System	1) Analyse and describe antenna parameters	5	Types, position, polarisation, patterns, coverage, distribution circuits, radiated power, monitoring antennas
5. Monitoring Sub System	1) Describe and explain the monitoring parameters according to ICAO Annex 10	2	RF-Level, DDM, SDM on position and width
	2) Describe and explain the additional monitoring parameters	2	External, internal and integral monitoring
	3) Describe and explain the far field monitoring system	2	Position, width
	4) Draw and explain the block diagram	3	Near-field, integral network, internal network, monitor signal processor
6. Implementation	1) Verify the impact of the requirements on the location and the type of the ground station	2	En route, approach and airport requirements and procedures
	2) Check the conformity of the system to ITU	3	ITU regulation, ICAO Annex 10
	3) Check the conformity to national regulations	3	National regulations
7. On board Equipment	1) Describe the on board equipment	2	Antennas, receiver, pilot interface (cross pointer), FMS
8. Compliance with Standards	1) Define the global performance criteria for ILS	2	Coverage, accuracy, availability of the system, integrity, continuity, category and level

Topic	Intermediate Objectives	Level	Content
	2) Perform the typical measurements	3	Output power, spectrum analysis, modulation, ID code
	3) Perform appropriate calibration tasks and assess flight inspection results	5	Flight inspection and ground calibration results
	4) Troubleshoot	5	Lack of power, carrier frequency deviation, harmonic ratio, depth of modulation

9. 2F – Systems	1) Describe and explain the capture effect	3	Capture effect in receiver circuits
	2) Describe and explain antenna parameters for 2F-LLZ	2	Types, position, polarisation, patterns, coverage, distribution circuits, radiated power
	3) Describe and explain antenna parameters for 2F-GS	2	Multipath

5.7 Ground Based Systems - MLS

1. Use of the System	1) Explain the operational use of MLS	2	Approach and landing procedures
	2) Theorize the principles of MLS	5	Azimuth, back azimuth and elevation by Time Reference Scanning Beam (TRSB)
	3) Explain the advantages of MLS	2	Type of information, accuracy, data link, small critical and sensitive areas, number of channels, complex approach paths, less prone to interference, comparison with conventional ILS
	4) Explain the disadvantages of MLS	2	Low equipment, complexity, cost
	5) Describe the current situation	2	Multi mode receivers, ground and a/c equipment

2. Ground Station Architecture	1) Draw and describe all components of MLS	2	Locations of the sub-systems
	2) Draw and explain the block diagram of azimuth, elevation and back azimuth station	2	Electronic cabinet, antennas, power supply, remote controls and monitoring

Topic	Intermediate Objectives	Level	Content
3. Transmitter Sub System	1) Design main signal parameters for azimuth, elevation and back azimuth station	4	Carrier frequency, output power, signals generated, timing
	2) Draw and describe the block diagram of the transmitter	2	Synthesizer, modulator, power amplifier, control coupler, RF-change over, BITE
4. Antenna Sub System	1) Describe and explain antenna parameters	2	Types, position, dimensions, polarisation, pattern, coverage, distribution circuits, radiated power, scan speed
5. Monitoring Sub System	1) Describe and explain the parameters for the monitoring according to ICAO Annex 10	2	RF-level, beam width, scan speed
	2) Describe and explain the additional monitoring parameters	2	External and internal monitoring
	3) Draw and explain the block diagram	2	Monitor signal processor
6. Implementation	1) Verify the impact of the requirements on the location and the type of the ground station	3	Approach and airport requirements and procedures
	2) Check the conformity of the system to ITU	3	ITU regulation, ICAO Annex 10
	3) Check the conformity to national regulations	3	National regulations
7. On board Equipment	1) Describe the on board equipment	2	Antennas, receiver, cross pointer, FMS, MMR
	2) Describe how the MLS information is used on board	2	Approach procedures, ILS like display
8. Compliance with Standards	1) Define the global performances for MLS	2	Coverage, accuracy, availability of the system, integrity, continuity, category and level
	2) Perform the typical measurements	3	Output power, spectrum analysis, data link modulation, ID code
	3) Calibrate	5	Flight inspection

Topic	Intermediate Objectives	Level	Content
	4) Troubleshoot	5	Lack of power, carrier frequency deviation, harmonic ratio

5.8 Satellite-Based Navigation Systems - GNSS1			
1. General View	1) Explain civil aviation requirements for navigation	2	GNSS panel
	2) Define all the components of the GNSS 1	1	GPS, GLONASS, augmentation
	3) Draw a diagram illustrating the architecture of GNSS 1 and the interdependencies	1	
	4) Explain how GNSS1 fulfils the Civil Aviation requirements	2	

2. GPS	1) Describe the architecture of the system	2	Space segment, control segment, user segment, current situation of the constellation
	2) Recognise the institutional issues related to GPS	1	
	3) Describe and calculate the main performance criteria for the GPS system	2	Link budget, receiver performance, coverage, integrity, availability, time to fix, Selective Availability (SA)
	4) Monitors how GPS performance criteria compares to civil aviation requirements and demonstrate the limited use of GPS	3	
	5) Given an aircraft route, estimate using a software package or/and GPS receiver, the availability of the constellation	3	Ref: software, GPS, receiver

3. GLONASS	1) Describe the architecture of the system	2	Space segment, control segment, user segment, current situation of the constellation
	2) Recognise the institutional issues related to GLONASS	1	Ownership, investment, security, continuity
	3) Describe and compute the main performance criteria of the GLONASS system	2	Link budget, receiver performance, coverage, integrity, availability, time to fix

Topic	Intermediate Objectives	Level	Content
	4) Compare GLONASS performance criteria to civil aviation requirements and demonstrate the limited use of GLONASS	3	Number of satellites, coverage, investment, continuity

5.9 Satellite-Based Navigation Systems - GBAS

1. General	1) Describe the improvements using GBAS concept	2	Accuracy, integrity within a local coverage
	2) Monitor how GBAS performance criteria compares to civil aviation requirements and demonstrate the possible use of GBAS for approach and landing	3	Integrity, accuracy; appropriate designators

2. Reference GNSS Ground Station	1) Describe the principles of local differential augmentation	2	Space and time errors correlation
	2) Describe the architecture of a reference station	2	Reference ground station (redundancy level of receivers and antennas, monitoring systems, data link, service volume, frequencies)
	3) Consider institutional issues and service provider responsibilities	2	Liability, integrity, monitoring and test

3. GRAS	1) Be aware of the GRAS proposal and of its application to area navigation	0	
---------	--	---	--

5.10 Satellite-Based Navigation Systems - SBAS

1. Generalities	1) Describe the architecture of the SBAS systems	2	Definitions, explain, ICAO implementation plan
	2) Explain message structure of SBAS systems	2	Messages defined in the MOPS and MASPS
	3) Explain expected performance of the SBAS	2	Performance defined in the SARPS
	4) Explain intended usage of the SBAS	2	Phases of flight in which SBAS can be used, and types of operations
	5) List strengths and weaknesses of the SBAS	1	Large area, limited infrastructure but dependency on GPS and coverage at high latitudes

Topic	Intermediate Objectives	Level	Content
2. EGNOS	1) State EGNOS history	1	Timeline from inception to now
	2) Draw and explain a diagram illustrating the EGNOS architecture	2	Segments of EGNOS
	3) Explain EGNOS current status	2	Validation through ESTB
	4) Explain EGNOS operation concept	2	EGNOS operational concept document
	5) Explain EGNOS institutional issues	2	EOIG, tripartite, agreement (ETG), relation to GALILEO
3. WAAS	1) Be aware of the existence of WAAS	0	
	2) List WAAS architecture	1	
	3) Explain WAAS current status	2	WAAS operational
	4) Explain WAAS issues	2	Cost overrun, future
4. MSAS	1) Be aware of the existence of MSAS	0	
	2) List MSAS architecture	1	
	3) Explain MSAS current status	2	MSAS operational
	4) Explain MSAS issues	2	Cost overrun, future
5. Interoperability	1) Explain the interoperability needs of the 3 SBAS	2	
	2) Describe the GNSS receivers	2	
	3) Describe the signal in space (SIS) for the 3 SBAS		
5.11 Satellite-Based Navigation Systems - ABAS			
1. Generalities	1) State that the improvement of integrity is the main purpose of ABAS	3	Definitions
2. Principles	1) Describe and explain the principles of ABAS	2	RAIM, AAIM
3. Impact	1) Demonstrate how the principles of ABAS impact on the navigation performance criteria	2	integrity, continuity and availability, Baro Vnav

Topic	Intermediate Objectives	Level	Content
5.12 Satellite-Based Navigation Systems - Modernized GPS			
1. Improvement of GPS	1) List the improvements of GPS between now and 2015 2) Describe the signal structure of L2 and L5 3) Describe the impact of L2 and L5 on the receiver 4) List the modernisation schedule 5) List the future accuracy of the GPS system 6) List the limitations of the future GPS system (no integrity, single nation, military control)	1 2 2 1 1 1	L2 and L5

5.13 Satellite-Based Navigation Systems - GALILEO			
1. GALILEO	1) Describe the European satellite navigation policy 2) List the sequence of events that lead to the development of GALILEO 3) List the GALILEO schedule 4) Describe the GALILEO costs and benefits analysis (CBA) 5) Define the current GALILEO architecture 6) Discuss the distribution of integrity information through GALILEO 7) Define the GALILEO services 8) Define the performance criteria of GALILEO 9) Discuss the aviation views of GALILEO 10) Discuss the US views of GALILEO 11) Discuss the interoperability of GALILEO and GPS	2 1 1 2 1 5 1 1 5 2 2	EU documents EU decisions The plan Costs, jobs, market, revenues Galileo documents, ground segment, space segment (constellation, signals and frequencies), control segment Compare to GPS Galileo documents The aviation views document Military views and FAA views
	12) Discuss the integration of EGNOS in GALILEO	2	Political views and technical views

Topic	Intermediate Objectives	Level	Content
5.14 Satellite-Based Navigation Systems - GNSS2			
1. General View	1) Explain performance improvements over GNSS1	3	Modernised GPS, Galileo Control of system, levels of service
	2) Define all components of GNSS2	1	
	3) Explain the institutional issues of GNSS2	2	
2. Modernised GPS	1) State the US satellite navigation policy	1	New civil frequencies (L2 and L5), new signal structure, new control segment, etc. Performances, receiver architecture
	2) List the improvements provided by modernised GPS	1	
	3) Evaluate the impact of these improvements	5	
3. GALILEO	1) Explain GALILEO's role in GNSS2 with specific reference to European policy	2	EU documents
5.15 On board Navigation Architecture			
1. Architecture	1) Describe the current navigation architecture	2	Sensors, HMI, FMS, navigation data base
5.16 Display Systems			
1. HMI	1) Be aware of the presentation of different HMI	0	Horizontal situation indicator (HSI), navigation display (ND), primary Flight display (PFD)
5.17 Inertial Navigation			
1. Inertial Navigation	1) Describe the principles and key features of INS navigation	2	Sensors and process
5.18 Vertical Navigation			
1. Barometry	1) Describe the principles and key features	2	QFE, QNH, flight level, ICAO standard atmosphere, phases of flight, link to SSR mode C and mode S Accuracy, integrity, availability, requirements, recent improvement (RVSM) capability
	2) Describe the performances	2	

Topic	Intermediate Objectives	Level	Content
2. Radio Altimetry	1) Describe the principles and key features	2	Phases of flight (approach and landing), safety net, aural warning
	2) Describe the performance criteria	2	Accuracy, integrity, availability, requirements

5.19 Safety Attitude & Functional Safety

1. Safety Attitude	1) State the role of ATSEP in Safety management routines and in reporting processes	1	Safety assessment documentation related to navigation system, safety reports and occurrences, safety monitoring.
2. Functional Safety	1) Describe the implications of functional failures in terms of exposure time, environment, effect on controller and pilot	2	Total or partial, premature or delayed operation, spurious, intermittent, loss or corruption of data, missing or incorrect input or output, safety policy, safety policy and implementation, other national and international policies.

5.20 Health and Safety

1. Hazard Awareness	1) Be aware of potential hazards to health and safety generated by navigation equipment	0	Mechanical hazards, electrical hazards(HV, EMI), chemical hazards
2. Rules and Procedures	1) State applicable international requirements	1	Relevant international documents
	2) State any applicable legal national requirement	1	Relevant national documents
	3) State safety procedure for persons working on or near a navigation equipment	1	Isolation (clothing, tools), fire extinguisher types, safety man presence, safety interlocks, isolating switches, security of the site, climbing procedures
3. Practical Situation	1) In a practical situation, apply and demonstrate the procedures and techniques to be followed	2	Replacing fuses or boards, start up/ shut down a station, climbing procedures
4. Resuscitation Techniques	1) Apply and demonstrate resuscitation techniques	3	First aid, rescue procedures, resuscitation

Chapter 6

Surveillance

Introduction

Surveillance Systems provide a means of relaying essential information for the safe and orderly operation of ANS. They are governed by international and national standards. Surveillance Systems can be located anywhere on the airport, in its vicinity, or at a great distance.

Training Objective

Students shall describe the Surveillance systems and equipment of their national ANS provider. It is therefore very important that the ATSEP understand the purpose of each system/equipment, the technical specifications (power, frequencies, connections, etc....).

It is also imperative that the ATSEP understands the effect and impact on the service while working on these systems/equipment.

Condition: In a laboratory environment, given exposure to specific communication equipment along with the appropriate and pertinent training material, reference documentation, test equipment and tools:

Performance: The trainee will be able to perform:

- preventive maintenance;
- corrective maintenance;
- calibration;
- certification.

Standard of accomplishment: All maintenance should be performed as per the approved standards and procedures.

This chapter includes twelve (12) parts:

- 6.1 ATC Surveillance
- 6.2 Meteorology
- 6.3 SMR
- 6.4 SSR and M-SSR
- 6.5 Mode S
- 6.6 SSR Environment
- 6.7 General View on ADS
- 6.8 ADS B
- 6.9 ADS C
- 6.10 HMI
- 6.11 Safety Attitude and Functional Safety
- 6.12 Health and Safety

Chapter 6 Surveillance/ Primary		The students should be able to:		
Topic	Intermediate Objectives	Level	Content	
6.1 Surveillance/Primary - ATC-Surveillance				
1. Functional Safety of PSR	1) State the role of ATSEP in safety management routines and in reporting processes	1	Safety assessment documentation related to primary surveillance system, safety reports and occurrences, safety monitoring	
	2) Describe, in terms of exposure time and environment, the effect on controller and pilot, relative to the types of functional failures	2	Total or partial failure. Premature or delayed operational implementation. Spurious and intermittent failure or degradation. Loss or corruption of data, missing or incorrect input or output (Ex: Ref: Safety policy and implementation, ESARR)	
2. Use of PSR for En Route Services	1) Define the operational requirements of an en route radar and calculate the key parameters necessary to achieve this performance	3	Range, resolution, coverage, probability of detection, MTBF, availability, PRF, frequency WRT range, frequency diversity, blind speed, range WRT Tx power, antenna gain, receiver MDS, update rate, PD WRT resolution, PRF, beam-width, extractor minimum target threshold	
	2) State the key parameters of an en route primary radar	1	Frequency, PRF, rotation rate, power	
3. Use of PSR for Terminal and Approach Services	1) Define the operational requirements and special parameters of an approach radar and calculate the key parameters necessary to achieve this performance	3	ASR, SMR, range, resolution, coverage, update rate, probability of detection, MTBF availability, PRF, frequency WRT range, frequency diversity, blind speed, range WRT Tx power, antenna gain, receiver MDS, update rate, PD WRT resolution, PRF beam-width, extractor minimum target threshold, PD WRT weather, polarisation	
	2) State the key parameters of an approach primary radar	1	Frequency, PRF, rotation rate, power	

Topic	Intermediate Objectives	Level	Content
4. Antenna (PSR)	1) Describe antenna types, accuracy and problems	2	Antenna beam, sidelobes, reflector antenna, active (phased array) antenna, rotating joints, waveguide interface, pressurisation de-humidification, polarisation, azimuth encoding, drive systems, lubrication system
5. Data Transmission (PSR)	1) Describe the requirements of radar data transmission	2	Latency, redundancy, quality, error detection
	2) Describe the implementation options	2	ASTERIX, RADNET, RMCDE, HDLC, X25, ETHERNET, FDDI
	3) Decode all the details from an ASTERIX message	3	Type range, azimuth and time, etc.
	4) Decode data from a locally used message format	3	As appropriate to local format
	5) Describe the specialised test tools and their purpose in maintaining the correct operation of the system	2	Data analyser, line analyser, debug, BITE, spectrum analyser, vector voltmeter, oscilloscope, etc.
	6) Interpret fault report based on various test tool measures	5	Data analyser, line analyser, debug, BITE, spectrum analyser, vector voltmeter, oscilloscope, etc.
	7) Operate test tools to analyse the system	3	Vector voltmeter, oscilloscope
	8) Design a radar network comprised of 4 radar sites feeding 2 control units, with full redundancy	4	Fault tolerance, redundancy of-line equipment, software fallback capability
	9) Characterise system degradations	2	Saturation, late plots, DRC, latency
6. Transmitters	1) Describe the basic characteristics of a transmitter	2	Timing, coherency, modulation, pulse width, pulse energy, frequency agility power output devices (details of pro-cons)
	2) Describe the signals at all key points in a block diagram	2	Supply, EHT, RF source (appropriate to type chosen), modulation, interlocks, BITE
	3) Draw and explain a generic transmitter block diagram for both a compressed and non-compressed system	2	Klystron, magnetron, travelling wave tube, solid state

Topic	Intermediate Objectives	Level	Content
	4) List the possible failures and where they can occur with reference to the block diagram	1	Arcing, corona discharge, component stress, control loops, isolation Example design for HV stabilisation
	5) Describe the constraints and problems on the high voltage circuitry	2	Corona discharge, dielectric stress, isolation, arcing, ageing, interlocks, stability (including control loop), health and safety
	6) Describe methods to diagnose faults	2	Crystal detectors, spectrum analyser, calorimeter, power meters, BITE
	7) Operate measuring equipment	3	Crystal detectors, spectrum analyser, calorimeter, power meters, BITE
	8) Using special techniques, detect faults	4	Crystal detectors, spectrum analyser, calorimeter, power meters, BITE

7. Characteristics of Primary Targets	1) Describe the characteristics of a primary target	2	Backscatter, radar cross section, reflectivity, stealth technologies, aspect, doppler shift
---------------------------------------	---	---	---

8. Receivers	1) Describe the basic characteristics of a receiver	2	Low noise, high dynamic range, bandwidth, detection, frequency, sensitivity, selectivity
	2) Draw and explain a generic receiver block diagram	2	LNTA, local oscillator, coherent oscillator, down mixing, filtering, rejection, IF, PSD, AGC, STC, beam switching, BITE
	3) Explain the importance of STC	2	Saturation, RF-IF dynamic range
	4) Describe the special testing methods and techniques which are required	2	Termination, crystal detector, range azimuth triggering, test target injection, power measurement, spectrum analyser

9. Plot Extractions	1) Describe the basic function of a data processor	2	Plot extraction (range bin reports, range correlation, azimuth correlation), target reports, weather vector generation, sliding window, centre of gravity
---------------------	--	---	---

Topic	Intermediate Objectives	Level	Content
10. Signal Processing	1) Describe the basic functions of a modern radar signal processor	2	A/D-Conversion, I/Q-matching, target detection, detection criteria (fixed, adaptive), MTD and clutter-maps
11. Surveillance Processing	1) Describe the processing techniques to improve the quality of target reports using scan to scan information	2	Tracking, environment mapping, adaptive feedback to extraction parameters
12. Displays	1) Describe the basics of PPI displays with long persistence phosphor and electronic retiming	2	Plan position indicator (PPI), time basis, re-scanners, video data
13. Control Tests and Monitoring	1) Describe testing possibilities	2	BITE System in modern equipment (online, offline), SASS (C&F)
14. Unique Characteristics of Primary Radar	1) Explain the basic principles of electromagnetism, propagation, signal detectability, power generation and distribution, problems on transmitters and receivers (general)	2	Basic Fundamentals Frequency and phase, electromagnetic radiation, spectrum and bandwidth, noise, powertubes, waveguide-problems
	2) Describe the radar in the ATC environment	2	Non safety critical element, target identification, operational coverage area, relative and absolute accuracy
15. PAR	1) Explain the basic principles of PAR	2	Elevation and Azimuth scanning (mechanical, electronic) capable of approach guidance independently of avionics
6.2 Surveillance/ Primary - Meteorology			
1. Meteorological Radar	1) List the main type of information provided by weather radar	1	Weather radar, wind profile radar, windshear radar
	2) Describe the combining of a weather channel in a surveillance radar	2	Scan rate, polarisation, limited height estimation frequency
	3) State the characteristics of a meteorological radar	1	Range, power, scan rate, AE type, Rx processing

Topic	Intermediate Objectives	Level	Content
6.3 Surveillance - SMR			
1. Functional Safety of SMR	1) State the role of ATSEP in Safety Management Routines and in reporting processes	1	Safety assessment documentation related to SMR, safety reports and occurrences, safety monitoring
	2) Describe, in terms of exposure time and environment, the effect on controller and pilot, relative to the types of functional failures	2	Total or partial failure. Premature or delayed operational implementation. Spurious and intermittent failure or degradation. Loss or corruption of data, missing or incorrect input or output (EX:Ref: Safety policy and implementation, ESARR)
2. Use of Radar for Aerodrome Services	1) Define the operational requirements of a SMR and calculate the key parameters necessary to achieve this performance	3	Range, resolution, coverage, update rate, probability of detection, MTBF availability, PRF, frequency, range WRT Tx power, antenna gain, receiver MDS, update rate PD WRT resolution, PRF beam-width, PD WRT weather, polarisation
3. Radar Sensor	1) Draw and explain a layout of the SMR sensor system	2	Dual system, service display
	2) Describe the basic functions of the receiver/transmitter unit		Hardware/ function overview
	3) Describe how to operate a sensor	2	Block diagram, timing relations, video path, frequency agility, frequency diversity, polarization, controller structure
	4) Describe the basic functions of the antenna unit	2	Hardware function overview, control/switch unit, external interface, azimuth encoding
4. SMR Display System	1) Describe the layout of the SMR display system and its capabilities	2	Hardware block diagram, software structure, external interfaces
	2) Describe the basic functions of the display SMR system	2	Video processing and tracking, map creation and blanking

Topic	Intermediate Objectives	Level	Content
	3) Describe how to operate the system	2	Sensor interface, scan to scan correlator processor, identification and alerting, display sub system, control and monitoring system

6.4 Surveillance/Secondary - SSR and M-SSR

1. Functional Safety of SSR	1) State the role of ATSEP in Safety Management Routines and in reporting processes	1	Safety assessment documentation related to secondary surveillance system, safety reports and occurrences, safety monitoring
	2) Describe the effect on the controller and pilot, with respect to the types of functional failures.	2	Total or partial failure. Premature or delayed operational implementation. Spurious and intermittent failure or degradation. Loss or corruption of data, missing or incorrect input or output (Ex:Ref: Safety policy and implementation, ESARR)

2. Use of SSR for En route Services	1) Define the operational requirements for an en route radar and identify the key parameters necessary to achieve this performance	1	Range, coverage, PD, resolution, performance, update rate, PRF, interface, rotational speed, power budget (uplink, downlink) Ref ICAO-Manual of the SSR systems (Doc 9684)
	2) State the key parameters of an en route secondary radar	1	Rotation rate, PRF, interface, capacity
	3) Describe, in terms of exposure time and environment, the effect on controller and pilot relative to the types of functional failures	2	Total or partial failure. Premature or delayed operational implementation. Spurious and intermittent failure or degradation. Loss or corruption of data, missing or incorrect input or output (Ex: Ref: Safety policy and implementation, ESARR)

Topic	Intermediate Objectives	Level	Content
3. Use of SSR for Terminal and Approach Services	1) State the key parameters of an approach SSR radar	1	Tx power, receiver MDS, rotation speed, PRF, interface, electronic scanning
	2) Describe, in terms of exposure time, environment, the effect on controller and pilot, relative to the types of functional failures	2	Total or partial failure. Premature or delayed operation implementation. Spurious and intermittent failure or degradation. Loss or corruption of data, missing or incorrect input or output (Ex:Ref: Safety policy and implementation, ESARR)
4. Antenna (SSR)	1) Describe the principle of SSR/MSSR antenna	2	Active antenna, monopulse antenna, LVA, waveguide, phasing – monopulse antenna, sum, difference and control pattern Error angle measurement, beam sharpening
5. Data Transmission (SSR)	1) State that primary radar and secondary radar data transmissions are using the same techniques	1	See PSR data transmissions for details (this objective requires that PSR transmission objective has been covered)
	2) Describe data message output from secondary equipment	2	Type, range, Azimuth, A & C codes (12 bit), emergency, validation, garble
	3) Describe the requirements of radar data transmission	2	Latency, redundancy, quality, error detection
	4) Describe the implementation options	2	Point to Point network
	5) Decode all the details of an ASTERIX message	3	Callsign, range, azimuth, altitude, time, SPI and emergency etc.
6. Interrogator	1) Describe the characteristics of an Interrogator	2	Frequency, spectrum, interrogation modes, Duty cycle, SLS, IISLS, rotational interlock
	2) Draw and explain a generic interrogator block diagram	2	Timing, interface, modulator, BITE
	3) Explain the need for integrity monitoring	2	Safeguards against erroneous transmission, BITE

Topic	Intermediate Objectives	Level	Content
7. Transponder	1) Explain the operational use of the transponder	2	Diagram of interaction between transponder and aeroplane
	2) Define the global performances	1	Range, accuracy, fixed delay to respond
	3) Describe the basic characteristics of a Transponder	2	Dual electronics, aerial location/switching and polar diagram, size, ACAS MODE-S compatibility, maximum replay rate, ISLS
	4) Explain the advantages of the transponder	2	Longer range, more information
	5) Explain the limitations of the transponder	2	100's of feet precision, 3A limited codes, squawk switch
	6) Describe the HMI presented to the pilot	2	Mode 3A switch settings, special position indicator (SPI)
	7) Check the conformity to national regulations	3	National regulations corresponding to the ICAO Annex 10
	8) Describe the data format of the received transponder messages	2	P1, P2, P3 signals
	9) Describe the data format of the transmitted transponder messages	2	Field lengths, data bits, grey code, unused bits
	10) Decode a transponder message	3	Standard message with SPI set
	11) Describe the basic characteristics of a transmitter	2	Timing, modulation, pulse width, power output, ISLS, IISLS
8. Receiver	1) Describe the basic characteristic of a SSR-receiver	2	Standard receiver/MMSR receiver, sensibility, bandwidth, dynamic range, STC (Normal, sectorized), amplitude processor, phase processor, RSLs, multipath and interferences
9. Extraction	1) Describe monopulse extraction	2	Phase and amplitude modulation, Off boresight angle calculation, azimuth encoding
	2) Describe sliding window SSR extraction	2	Leading edge, trailing edge, azimuth accuracy, azimuth encoding

Topic	Intermediate Objectives	Level	Content
10. Signal Processing	1) Describe the signal processing	2	Video-digitizer, pulse processor, reply decoder (bracket pair detector) synchronous replay correlator
11. Surveillance Processing for replay verification	1) Describe the SSR processing techniques	2	Discrete code correlation, general association, zones, categories, code swapping, general correlation mode A code data, mode C data, target position report
12. Displays (SSR)	1) Describe the SSR display options	2	Video, video + label, synthetic
13. Surveillance Processing for Plot Verification	1) Explain the reasons for surveillance processing and the key options	2	False target identification and elimination, data validation, data correction, reflection identification and processing, enhanced resolution performance
6.5 Surveillance/ Secondary - Mode S			
1. Introduction to Mode S	1) Explain the working principles of Mode S	2	Mode S interrogation, mode S reply, Mode S uplink and downlink capability, Mode S formats/protocols
	2) List the advantages of Mode S	1	Resolution, integrity, enhanced data (e.g. 25 feet resolution, call sign)
	3) Explain how mode S is compatible with MSSR	2	RF signals in space, the operational use of P1 to P4, the use of side-lobe suppression to control a/c response, all-call & lockout facility, timescales
	4) Explain Mode S implementation strategy in your area	2	Elementary surveillance, clusters and II codes
2. Mode S System	1) Describe the theory of operation of hardware and software	2	Mode S performance of the system, theory of operation of the system, interfaces to customer equipment, other mode S station clusters
	2) Describe testing possibilities for Mode S	2	SASS-C, SASS-S, Poems Test Environment (PTE), Radar Environment Simulator (RES)

Topic	Intermediate Objectives	Level	Content
6.6 Surveillance/ Secondary - SSR Environment			
1. SSR Environment	1) Explain the operational use of ACAS and implications for pilots and controllers	2	Traffic Advisories (TA), Resolution advisories (RA), pilot responses and controller information
	2) Explain the working principles of ACAS	2	Aircraft interrogations, whisper/shout, cockpit displays and warnings, multipath effects
	3) Describe the users of the 1030Mhz 1090Mhz channels	2	Modes 1 3 A C S, military, mode S uplink and downlink capability ACAS (TCAS), acquisition and extended squitter, PFR-FRUIT ratios, DME and other interference
	4) Explain the working principles of multilateration (MLT)	2	Principles of MLT, use of mode-S squitter, benefits for the airport

6.7 Surveillance - General View on ADS			
1. Definition of ADS	1) Recognise on a diagram all the elements of the ADS	1	Navigation solution, link, scheduling Contract/broadcast
	2) Describe the basic characteristics of an ADS	2	Performance, integrity, latency, QoS, implementation options (e.g. ATN/FANS)
	3) List the types of navigation sensors	1	GNSS, ins, radio Navaids, navigation solutions from FMS, FoM
	4) Be aware of latest developments, implementation plans and projects	0	Current and recent test and trials, ICAO status, Eurocontrol, FAA and other authorities positions, airline and equipment manufacturer positions, ATC procedures, time-scales

Topic	Intermediate Objectives	Level	Content
6.8 Surveillance - ADS B			
1. Functional Safety of ADS B	1) Describe in terms of exposure time and environment, the effect on controller and pilot relative to the types of functional failures	2	Total or partial failure. Premature or delayed operational implementation. Spurious and intermittent failure or degradation. Loss or corruption of data, missing or incorrect input or output (Ex:Ref: Safety policy and implementation, ESARR)
2. Introduction to ADS B	1) Explain the basic principles of ADS B	2	Autonomous operation, navigation solutions, link options, aircraft situation awareness
	2) Differentiate on a diagram all the possible elements of ADS B	2	Navigation solution, FMS, encoding, scheduling, link
	3) Define the ASAS concept	1	
	4) Explain the use of ADS in support of the ASAS concept	2	
3. Techniques in ADS B	1) Explain the characteristics of the techniques used in ADS B	2	VDL 4, mode S extended squitter, UAT
	2) List the advantages / limitations of ADS B	1	Advantages (global situational awareness, minimum ground investments, remote areas); limitations (level of confidence, use according to density of traffic)
4. VDL Mode 4 (STDMA)	1) Describe the use of VDL mode 4	2	High level description
	2) Use the ICAO documentation to explain the principles relating to signals in space	3	Modulation scheme, signal structure, key data and frequency channels
	3) Use the ICAO documentation to explain the principles relating to Access technology	3	Timing, self organising reservation mechanism
	4) Explain the relevant protocols	2	Burst structure (fields, fixed part, variable part)
	5) Explain the relevant messages	2	Information in each field, information encoding and decoding

Topic	Intermediate Objectives	Level	Content
	6) Describe a VDL mode 4 signal	2	Show signal timings (remark: it is not a single package, it is a set of messages)
	7) Decode and analyse a signal coded according to the Asterix relevant standard	4	Reference to Asterix standard

5. Mode S Extended Squitter	1) Describe the use of the mode S extended squitter	2	High level description
	2) Use the ICAO documentation to explain the principles relating to signals in space	3	Modulation scheme, signal structure, key data and frequency
	3) Use the ICAO documentation to explain the principles relating to random access technology	3	Consequences on the RF environment (1090 MHz)
	4) Explain the relevant messages	2	Information in each field, information encoding and decoding
	5) Decode and analyse a mode S extended squitter signal	4	Signal timing and sequencing, position encoding
	6) Decode and analyse a signal coded according to the Asterix relevant standard	4	Reference to Asterix standard

6. UAT	1) Describe the use of the UAT	2	High level description (details to follow when ICAO standards are available)
--------	--------------------------------	---	--

6.9 Surveillance - ADS C

1. Functional Safety of ADS C	1) State the role of ATSEP in Safety Management Routines, and in reporting processes	1	Safety assessment documentation relating to ADS C technique, safety reports and occurrences, safety monitoring
	2) Describe in terms of exposure time and environment, the effect on controller and pilot, relative to the types of functional failures	2	Total or partial failure, premature or delayed operation implementation. Spurious and intermittent failure or degradation. Loss or corruption of data, missing or incorrect input or output (Ex:Ref: Safety policy and implementation, ESARR)

Topic	Intermediate Objectives	Level	Content
2. Introduction to ADS C	1) Explain the basic principles of ADS C	2	Contract, multi-contract, time, event triggering, long latency
	2) Differentiate on a diagram all the possible elements of the ADS C system	3	Navigation solution, processor, link, ground station

3. Techniques in ADS C	1) Explain the characteristics of the techniques possibly used in ADS C	2	ATN application, ATN air-ground sub-networks (VDLs, mode S DL, AMSS, HDL)....
	2) List advantages/limitations of the ADS C system	1	Advantages (minimum ground investment, remote area); limitations (quality of service, latency, common mode of failure)
	3) Explain the relevant messages	2	Information in each field, information encoding and decoding
	4) Decode the ADS C messages coming from the ATN router	3	Decode and analyse a signal coded according to the relevant standard (ADS Panel documentation)
	5) Identify and locate data transmission problems	3	Subject to system development and availability

6.10 Surveillance - HMI

1. ATCO HMI	1) Describe the display types available	2	Video, synthetic, mixed
	2) State the type of selections available	1	Source, range, maps, filters
	3) Describe the advantages of different display types	2	Clarity, configurability, fallback, data integration

2. ATSEP HMI	1) Describe the user interface scope and ergonomics as seen by different users and at different locations	2	System management displays characteristics, both control and monitoring
	2) Describe the analytical and status data available to the users	2	Radar video, front panel and CMS data. HMI's on each subsystem

3. PILOT HMI	1) Describe the transponder interface	2	Mode A, change procedure, SPI, Mode C, de-selection, hijack
	2) Be aware of the ACAS/TCAS display and future potential developments	0	Characteristics, accuracy, alerts, ADS-B, CDTI

Topic	Intermediate Objectives	Level	Content
	3) Be aware of the EGPWS display and of future potential developments	0	

4. Displays	1) Describe the display types available and their advantages and disadvantages	2	Raster / rotating, raw / synthetic, monochrome / colour, CRT / LCD, performances (cost, availability, maintainability, ergonomics)
-------------	--	---	--

6.11 Safety Attitude & Functional Safety

1. Safety Attitude	1) State the role of ATSEP in Safety Management Routines and in reporting processes	1	Safety assessment documentation related to surveillance system, safety reports and occurrences, safety monitoring.
--------------------	---	---	--

2. Functional Safety	1) Describe the implications of functional failures in terms of exposure time and environment, and the effect on controller and pilot	2	Total or partial, premature or delayed operation, spurious, intermittent, loss or corruption of data, missing or incorrect input or output Ref: EATCHIP safety policy, safety policy and implementation, other National and International policies.
----------------------	---	---	--

6.12 Health and Safety

1. Hazard Awareness	1) Be aware of potential hazards to health and safety generated by surveillance equipment	0	Mechanical hazards, electrical hazards (HV, EMI), chemical hazards, radiation hazards
---------------------	---	---	---

2. Rules and Procedures	1) State applicable international requirement	1	Relevant international documents
	2) State any applicable national legal requirements	1	Relevant national documents
	3) State the safety procedures for persons working on or near surveillance equipment	1	Isolation (clothing, tools), fire extinguisher types, safety man presence, safety interlocks, isolating switches, security of the site
	4) State the rules and procedures relevant to the manipulation and storing of hazardous products and environmental protection	1	Relevant company procedures

Topic	Intermediate Objectives	Level	Content
3. Practical Situations	1) In a practical situation, apply and demonstrate the procedures and techniques to be followed	3	e.g. Changing wave guide, replacing fuses or boards, start up/ shut down a station....
4. Resuscitation Techniques	1) Apply and demonstrate resuscitation techniques	3	First aid, rescue procedures, resuscitation

Chapter 7

Data Processing

Introduction

Data Processing Systems provide means of relaying essential information for the safe and orderly operation of ANS. Data Processing includes a combination of hardware platforms and operating system software. Proper hardware and software configurations are essential for a safe and orderly ANS. These systems are governed by international and national standards. Data Processing systems can be located anywhere at the ACC, on the airport, or in its vicinity, or remote from the ACC or airport.

Training Objective

Students shall describe the Data Processing systems and equipment of their National ANS provider. It is therefore very important that the ATSEP understand the purpose of each system/equipment, the technical specifications (software, hardware, interoperability, connections, etc...).

It is also imperative that the ATSEP understand the effect and impact on the service while working on these systems/equipment.

This chapter has been divided into 9 parts and each part addresses a specific aspect of the data processing.

Condition: In a laboratory environment, given exposure to specific data processing equipment and software along with the appropriate and pertinent training material, reference documentation, test equipment and tools:

Performance: The trainee will be able to perform:

- preventive maintenance;
- corrective maintenance;
- calibration;
- certification.

Standard of accomplishment: All maintenance should be performed as per the approved standards and procedures.

This chapter includes nine (9) parts:

- 7.1 Data Processing – User Functional View
- 7.2 Data Processing Chain
- 7.3 Data Processing – Software Process
- 7.4 Data Processing – Hardware Platform
- 7.5 Data Processing – Data Essential Features
- 7.6 Data Processing – Life Cycle
- 7.7 Data Processing – Aviation Data Detailed Structure
- 7.8 Safety Attitude and Functional Safety
- 7.9 Health and Safety

Chapter 7 Data Processing	The students should be able to:		
Topic and Subtopic	Objectives	Level	Content

7.1 Data Processing - User Functional View

1. Tools for ATM Strategy	1) Explain the main features of your strategy in your area	2	Give examples of strategy; Ex: ICAO, Eurocontrol, etc....
---------------------------	--	---	---

2. Controller Role Development	1) Explain the controller role development	2	
--------------------------------	--	---	--

3. ATC Data Processing Directions for Change Overview	1) Be aware of the projects concerning ATC data processing	2	
---	--	---	--

4. Trajectories - Prediction, Calculation and Negotiation	1) Explain the main process	2	
	2) State what decisions are predicated on these calculations	1	

5. Collaborative Planning and Decision Making	1) Be aware of the current state of research and regulations in this area	0	
---	---	---	--

6. FMS Development	1) Be aware of the current state of the art in this area	0	
--------------------	--	---	--

7. Ground Safety Nets	1) List the safety nets, their functions and their legislative status	1	
-----------------------	---	---	--

8. Decision Support	1) List the steps in ATM traffic planning process	1	ATFM with strategic, pre-tactical and tactical, ATC sector planning, tactical control
	2) List the four areas of improvement for ATC decision support	1	Conflict detection, conflict resolution, traffic complexity reduction, acquisition of aircraft data

Topic	Intermediate Objectives	Level	Content
	3) Explain the principles of trajectory prediction, conformance monitoring and medium and short term conflict detection	2	
	4) Discuss the benefit of these tools for safety and efficiency	5	

9. Arrival, Departure and Surface Movement Management	1) Be aware of current developments and future possibilities	0	
---	--	---	--

10. Operational Aspects of Future Communication and Surveillance Support	1) Be aware of current developments and future possibilities	0	
--	--	---	--

11. Collaborative ATC, Delegation of Separation	1) Be aware of current developments and future possibilities	0	
---	--	---	--

7.2 Data Processing Chain

1. Flight Data Processing	1) Be aware of the system scope of FDPS and the life cycle of the FPL	0	Automation levels, FDPS, core FDP functions, added FDP functions
---------------------------	---	---	--

2. Surveillance Data Processing	1) Be aware of the system scope of SDPS and the life cycle of the major data items	0	Data distribution, radar plots, mono radar tracks, multi radar tracks, ADS report
---------------------------------	--	---	---

3. Associated DPC functions	1) List the associated DPC functions	0	Correlation, vertical tracking, conflict prediction
-----------------------------	--------------------------------------	---	---

7.3 Data Processing - Software Process

1. Middleware	1) Define middleware	1	Additional specialised functional built on the OS E.g. CORBA, UBSS, OTM, EJB Duel processing system
	2) List the middleware used on the national major systems	1	
	3) Demonstrate the use of a middleware in an ATM environment	2	

Topic	Intermediate Objectives	Level	Content
2. Operating Systems	1) Perform operating systems commands, exercising the major features of a target OS	3	Unix, Linux, Windows etc. according to the systems in use
	2) Characterise consequences of an OS upgrade	2	List the possible implications on HW (performance, memory, etc...), middleware (compatibility) and SW components
	3) Explain downward compatibility	2	Checks on embedded SW modules ability to run under new OS-Version
	4) Take account of hardware/software compatibility	2	HW-requirements of specific SW implementations
	5) Describe interactions between application and OS	2	Examples of OS-Calls by the application software if no middleware is in use
3. Software Development Process	1) List the main software development processes used in industries	1	e.g. Lifecycle, waterfall model, Rational Unified Process (RUP)
	2) List the main steps of the classical process	1	Specification, analysis, design, realisation, test
	3) List the main elements of RUP	1	Iterative development, management, unified modelling language (UML)
	4) List the main differences between RUP and classical process	1	advantages/disadvantages of the different methods
	5) List the main differences of the various methods	1	Advantages/disadvantages of the different methods
	6) Discuss the advantages, disadvantages and constraints from the RUP and procedural process	5	

Topic	Intermediate Objectives	Level	Content
7.4 Data Processing - Hardware Platform			
1. Equipment Upgrade	1) Identify the key points that have to be considered when EDP equipment is upgraded (or changed)	3	Specification, compatibility, "proven technology" or "state-of-the-art", maintenance & operating consequence (e.g. personnel, training, spares, procedures), environmental requirements (e.g. size, power requirements, temperature, interfaces), testing
2. COTS	1) Explain the advantages and disadvantages of commercial off the shelf equipment	2	Cost, multiplicity of suppliers, quality, maintainability, life-cycle, liability
3. Inter-dependence	1) Describe the technical issues regarding the interdependence of various equipment and systems	2	Interface requirements, common point of failure, data conditioning, response time
4. Maintainability	1) Identify the issues that will affect the maintainability of hardware for the planned life of a system	3	Commercial product life, commercial support commitments, company volatility, spares provision, shelf life and logistics
5. Awareness of details of hardware platform	1) Be aware that further studies shall be done during type rating	0	
7.5 Data Processing - DATA Essential Features			
1. Data Significance	1) Explain the significance of data	2	Criticality (critical- non critical), legality (ICAO, CAA, company), use (advisory, control)
2. Data Configuration Control	1) Name who is designated to authorise changes in operational data	1	Mechanisms and procedures
	2) Name who verifies and check the changes	1	Appropriate details from a system used in house
	3) Explain the control procedure on data	2	Appropriate details from a system used in house
3. Data Responsible Authority	1) Name the authority responsible for standards	1	Speed of light, nautical mile, world geodesic model, aircraft performance

Topic	Intermediate Objectives	Level	Content
4. Data Standards	1) List the standards related to aviation, their sources and their status	1	ASTERIX, WGS84, OLDI, FPL....
	2) Use defining documents to encode and decode a typical ATC data item	3	The Eurocontrol official defining documents to encode and decode typical plot data in ASTERIX....

7.6 Data Processing - Life Cycle

1. Appropriate Model	1) Apply the appropriate model to the analysis of a relevant aviation system	3	V model, waterfall, requirements, design, coding, testing, maintenance, cover detailed description of approved model(s) used in the administration....
----------------------	--	---	--

2. Domain Orientation	1) Be aware of nature of aviation processing requirements	0	Data volatility (e.g. radar), system integrity. Consequence of failure
-----------------------	---	---	--

3. Coding Practice	1) Describe the coding practices in your own ATM environment	2	C, C++, ADA, Pascal....
	2) Demonstrate the application of coding practice on a target language	3	

4. Configuration Control	1) Describe the principles of configuration control	2	Clear identification of all versions, proof of testing and 'build state', tool and mechanisms to aid control, authorisation, audit trail, appropriate quality standard requirements of the administration
--------------------------	---	---	---

5. Testing	1) Identify the techniques available in software testing, for both functional and integrity testing	3	Test specifications, user requirements, performance requirements, code walkthrough, modelling, simulation real time and fast time, black box testing, regression testing, formal methods, use of independent test personnel System integration testing, load testing, hardware failure simulation, data corruption simulation
	2) Identify the techniques available system testing and integration	3	

Topic	Intermediate Objectives	Level	Content
7.7 Data Processing - Aviation Data Detailed Structure			
1. System Area	1) List the elements of system area	1	
	2) Describe the structure of the data related to system area	2	
2. Characteristics Points Related to Geography	1) List the type of variables	1	Airports and runways, ILS, radar characteristics for ocp, limits points
	2) Describe the structure of all these variables	2	Airports and runways, ILS, radar characteristics for ocp, limits points
	3) Choose constants and variables	3	
3. Characteristics Points Related to Routing and Sectors	1) List the type of variables	1	Coded routes, SID allocation parameters, adjacent FIRs, sectors, holding
	2) Describe the structures of the variables	2	Coded routes, SID allocation parameters, adjacent FIRs, sectors, holding
	3) Choose constants and variables	3	
4. Aircraft Performances	1) List the performance data used in FDPS	1	Example of data from in house system
	2) Describe the structure of aircraft performance data	2	
	3) Define speeds, rates, levels	1	
	4) Explain the consequences of the use of the wrong type of aircraft	2	
	5) Be aware of the latest developments in FMS and DL	0	

Topic	Intermediate Objectives	Level	Content
5. HMI Interface Parameters (screen manager descriptives)	1) Describe the basic functions of the display SMR system	2	Screen manager description, strip format, function eligibility, HCP header information, SDD parameters, descriptive line numbers Screen manager description, strip format, function eligibilities, HCP header information, SDD parameters, descriptive line numbers
	2) Describe the layout of the display system and its capabilities	2	
	3) Describe how to operate the system	2	
	4) Handle the operational HMI and assist in the tuning of the screens	3	
6. Auto Coordination Messages	1) Describe the meaning of every coordination message in the control process	2	Coordination parameters, conditions groups, OLDI conditions groups, characteristics of remote centres (civil and military)
	2) Describe the characteristics of the remote centres relevant to OLDI	2	
7. Configuration Control Data	1) Explain the structure of the configuration data	2	Sector CSU link, sectorisation plan, control parameters
8. Physical Configuration Data	1) Explain the structure of the physical configuration data	2	External configuration, device configuration
9. Relevant Meteo Data	1) Explain the organisation of the data related to meteorology	2	Meteo, QNH TL areas, CB activity
10. Alert and Error Messages to ATSEP	1) Characterise the importance of each message	2	
	2) Describe one message of each category of importance	2	

Topic	Intermediate Objectives	Level	Content
11. Alert and Error Messages to ATCO	1) Describe the structure of the data used in these types of message	2	MSAW, conflict Alert parameters
	2) List the alerts and messages and explain their importance from an ATCO point of view	2	MSAW, conflict alert
	3) Identify the importance of alert and error messages through studies of real or mocked cases	3	

7.8 Safety Attitude & Functional Safety

1. Safety Attitude	1) State the role of ATSEP in Safety Management Routines and in reporting processes	1	Safety assessment documentation related to data processing system, safety reports and occurrences, safety monitoring.
--------------------	---	---	---

2. Functional Safety	1) Describe the implications of functional failure in terms of exposure time and environment, and the effect on controller and pilot	2	Total or partial, premature of delayed operation, spurious, intermittent, loss or corruption of data, missing or incorrect input or output Ref EATMP safety policy, safety policy and implementation, other national and international policies
----------------------	--	---	--

3. Software Integrity and Security	1) Appreciate how a system can be protected against potential hostile intent via the data processing systems	3	Input verification, secure sources e.g. leased lines, private networks, eligibility, etc
	2) Appreciate how the normal output of a system could be used by non-authorised persons with hostile intent	3	Terrorists using radar data to co-ordinate an attack....
	3) Estimate the impact of security and integrity failure to the operational service	3	e.g. system crashes due to incorrect input data, main and standby and fallback systems all have same input, possible loss in total system. Results in capacity reductions and safety consequences etc...

Topic	Intermediate Objectives	Level	Content
	4) Appreciate error detection and handling in data, hardware and process	3	Identification, consequence, scope, reporting, fault tolerance, soft fail, failsafe, monitoring, fallback

7.9 Health and Safety

1. Hazard Awareness	1) Be aware of potential hazards to health and safety generated by data processing equipment	0	Mechanical hazards, electrical hazards (HV, EMI), chemical hazards
---------------------	--	---	--

2. Rules and Procedures	1) State applicable International Requirement	1	Relevant international documents
	2) State any applicable legal national requirement	1	Relevant national documents
	3) State safety procedure for the persons working on or near data processing equipment	1	Isolation (clothing, tools), fire extinguisher types, safety man presence, safety interlocks, isolating switches, security of the site
	4) State the rules and procedures relevant to the manipulation and the storing of hazardous products and environmental protection	1	Relevant company procedures

3. Practical Situations	1) In a practical situation, apply and demonstrate the procedures and techniques to be followed	3	e.g. Changing parts, replacing fuses or boards, start up/ shut down a station
-------------------------	---	---	---

4. Resuscitation Techniques	1) Apply and demonstrate resuscitation techniques	3	First aid, rescue procedures, resuscitation
-----------------------------	---	---	---

Chapter 8

System Safety Training

Introduction

In each of the previous chapters, the elements of Functional Safety, Safety Attitudes and Health and Safety were discussed at a specific level depending on the field of activities of the ATSEP.

This chapter also deals with Safety elements. It complements the information found in each chapter. It relates to safety management and policies, concepts of risk assessment, hazard assessment, etc...So, It is important that the ATSEP realises that the safety aspects related to their work are vital and should not be pushed to the side or forgotten about.

Also in this chapter, the ATSEP will be instructed to differentiate between acceptable and unacceptable risk, and between a safe and an unsafe condition.

Training Objective

Students shall describe the System Safety Training provided by the National ANS. It is therefore very important that the ATSEP understands the purpose of each part and relates these safety items to their work.

It is also imperative that ATSEP understand the effect and impact on the service, the user, the systems/equipment and themselves, if they do not follow the proper safety practises.

Condition: Given a description of a specific situation relating to a state Air Navigation Service provider and the relationship with international and national authorities.

Performance: The trainee will be able to describe:

- a) the impact of their Safety Management Program on their ANS organisation.
- b) the principles of safety, the concepts of risk and risk assessment, hazard assessment and safety regulation.

Standard of accomplishment: All the descriptions should include the essential points of the given situation.

This chapter has been divided into 7 parts and each part addresses a specific aspect of the System Safety.

This chapter includes seven (7) parts:

- 8.1 Principles of Safety Management;
- 8.2 Safety Policy Statements and Principles;
- 8.3 Concept of Risk and Principles of Risk Assessment;
- 8.4 Safety Assessment Process;
- 8.5 Air Navigation System Risk Classification Scheme;
- 8.6 Functional Hazard Assessment Process Description;
- 8.7 Safety Regulation.

Chapter 8 System Safety Training	The students should be able to:		
Topic and Subtopic	Objectives	Level	Content

8.1 Principles of Safety Management			
Topic	Intermediate Objectives	Level	Content
1. Principles of Safety Management	1) Describe the underlying need for safety management policy and principles	2	Lessons learned from accidents, rising traffic levels, best practice
	2) Appreciate the reactive and proactive nature of safety management policy and principles	3	Nature of accidents, Reason model, incident investigation, safety assessment
	3) Explain why safety management policy and principles have to be implemented, not just documented	2	Principles of safety management, the means of managing safety

8.2 ANS Safety Policy Statements and Principles			
1. ANS Safety Policy Statements and Principles	1) Describe the ANS Safety policy statement	2	Safety management, safety responsibility, the priority of safety, the safety objective of ANS
	2) Describe the ANS Safety Management Principles	2	Safety achievement, safety assurance, safety promotion
	3) Relate the Safety Management Principles with the life cycle of an Air Navigation System	4	Competency, safety culture, quantitative safety levels, system safety assessment, safety surveys, safety monitoring, system safety assessment documentation, lesson dissemination, safety improvement

8.3 Concept of Risk and Principles of Risk Assessment			
1. Concept of Risk and Principles of Risk Assessment	1) Describe the concept of risk	2	Types of risk, components of risk

Topic	Intermediate Objectives	Level	Content
	2) Describe ways of measuring risk	2	Risk comparisons, risk analysis
	3) Describe the concept of risk tolerability	2	Risk perception, risk management, risk tolerability, ALARP principle
	4) Appreciate how risk assessment can aid decision making	3	Risk assessment, risk contributors (people, procedure and equipment) strengths and limitations of risk assessment

8.4 Safety Assessment Process

1. Safety Assessment Process	1) Describe the concepts of hazardous and failure conditions	2	
	2) Appreciate the importance of adopting a total system approach covering human, procedural and equipment elements	3	ATM system description, the need for safety assessment, end to end integrity of safety assessment
	3) Appreciate the importance of systematic safety assessment for the new generation of Air Navigation Systems	3	Major characteristic of the new generation of air navigation systems
	4) Describe the overall safety assessment process and its relationship with risk assessment	2	Risk based process, functional hazard assessment, preliminary system safety assessment, system safety assessment

8.5 Air Navigation System Risk Classification Scheme

1. Air Navigation System Risk Classification Scheme	1) Describe the Air Navigation System Risk Classification scheme	2	Failure scenario of air navigation system (incident chain), components of a risk classification scheme, severity classes, probability classes (qualitative and quantitative)
	2) Describe the application of the ALARP principle	2	Risk classification matrix, ALARP application

8.6 Functional Hazard Assessment Process Description					
Topic		Intermediate Objectives		Level	Content
1.	Functional Hazard Assessment Process Description	1)	Describe the process of functional hazard assessment, including the derivation of safety objectives	2	Description of the functional hazard assessment process, application of the process on ANS function

8.7 Safety Regulation					
1.	Safety Regulation	1)	Describe the role of safety regulation	2	The purpose of regulation, objectives of the safety regulation commission, objectives of the safety regulation unit, objectives of the national regulator
		2)	Describe the safety regulation documents and their impact on ANS	2	ICAO documentation, EUROCONTROL safety regulatory requirements, regulation advisory documentation, national regulation

Phase Three Specific Training

The Phase Three Specific Training focuses on a specific area of training or on specific ATSEP functions. This phase is the final stage for insuring ATSEP competency.

Following the completion of Phase Three Specific Training, the ATSEP will be assessed in order to meet the competency requirement to receive the certification delegation.

The ATSEP licensing and the system/equipment certification programs are not defined here, however, this training is a prerequisite to do so.

Chapter 9

Type Rating Training

Introduction

After completing the Phase One Basic Training and the Phase Two Qualification training or having the equivalent knowledge, all ATSEP must have training specially oriented to the equipment and its environment. The Type Rating training is system/equipment specific training. This Type Rating Training will provide training on systems and equipment used in the operational environment, allowing the ATSEP to gain valuable knowledge and skills. Each ATSEP who is rated on a specific equipment or system, must receive the associated type rating training.

The course should be split into three parts:

- Environmental knowledge for the equipment or system;
- Theoretical section of the equipment or system;
- Practical section enhanced by On The Job Training (OJT) on the equipment or system.

The Type Rating training can be taught at a specialised training centre, at the factory or at the site, however, at least the OJT portion dealing with the environment and logistic support must be done at the operational site.

The level of training will be done up to the lowest replaceable module (LRM) or electronic boards of the system/equipment. The repair of these modules or boards is not taken into account, and if necessary should be done through a specific training session.

For new systems/equipment, the State organization is responsible to foresee, plan and provide the training for the ATSEP. This training must be completed prior to the system becoming fully operational. ATSEP who participate in the FAT (Factory Acceptance Test) and the SAT (Site Acceptance Test) must receive the theoretical section of the training.

Condition: In a laboratory environment, given exposure to a specific equipment/system along with the appropriate and pertinent training material, reference documentation, test equipment and tools:

Performance: The trainee will be able to perform the:

- preventive maintenance;
- corrective maintenance;
- calibration;
- certification.

Standard of accomplishment: All maintenance should be performed as per the approved standards and procedures.

9.1 Environmental Knowledge

This part of the training gives a detailed view of the technical and operational environment of the system/equipment. It gives information on the logistic aspects, which can directly influence the system such as: power supply, air conditioning, interference, security, spares handling, etc.

Objectives

At the end of this training stage, the trainee must be able to:

- Explain the logistic environment of the system/equipment (access to the station, power supply, air-conditioning, safety rules, etc.)
- Identify and describe the different constituting parts of the system/equipment,
- Identify the main interactions between the system/equipment, and its environment,
- Explain the proper vocabulary relative to the system/equipment.
- Explain the maintenance procedures.

For trainees who might have some previous experience working with that system or equipment, the course could be adapted to teach only the missing information (after having defined the gap).

9.2 Theoretical Section of the Equipment or System

The purpose of this section is to familiarize the trainee with the system/equipment, in particular with the principles of its design, the different constitutive elements, their interactions, their functionality, and the hardware and software elements.

This section of the course will provide in-depth knowledge of the system/equipment by explaining its principles, descriptions, characteristics, performance standards and functionality. This training complements the knowledge received during the Phase Two Qualification Training but is specific to the equipment hardware and software components.

The different parts of the system/equipment will be explained in detail. It will also provide all the information needed to control, calibrate and maintain the equipment, and if necessary provide training on particular new technology which could be used in this equipment.

The HMI and SMC (System Monitoring and Control) parts of the equipment should also be described in detail.

Objectives:

At the end of this module, the trainee will be able to:

- Identify and explain the details of the different components of the system;
- describe the protocols used and the data flow;
- explain the different functionality and the performance of the system;
- explain the significance of the parameters and error messages;
- explain how to measure and check the different modules and parameters;
- explain how to perform unit replacement and calibration;
- explain the functionality of the HMI and SMC and their operation.

9.3 Practical Section enhanced by OJT

The purpose of this section is to give the trainee the practical skills required to apply the knowledge gained in the environment and theoretical courses. These skills will enable the trainee to operate and maintain the equipment.

Within this section, the trainee will perform basic operations, troubleshooting exercises, replacement and testing of faulty modules and alignment and calibration (if needed). The trainee will also apply the procedures particular to the measurement, testing, and re-starting of the system/equipment in order to certify that it meets the standards.

This section includes practical exercises and OJT training where the trainee works on live equipment under the supervision of an experienced ATSEP or instructor.

Objectives:

At the end of this session, the trainee will be able to:

- Follow the logistic processes and apply the safety procedures (access to the station, power supply, air-conditioning, safety rules, etc.);
- operate the system/equipment, perform the necessary control and monitoring functions (start or restart, configuration, etc.), including the HMI and SMC;
- perform checks and determine the cause of any faults by analysing the warnings, errors, alarms or failures messages or indications;
- measure and verify the parameters;
- run all available built-in tests, diagnostics and checks on the system/equipment;
- identify the problem area and faulty module/LRM;
- perform replacement of units/LRM and calibrate, if required;
- load the software and configure the system/equipment including the VSP;
- restore the system/equipment to an operational mode.

Rating of the ATSEP

After the ATSEP successfully completes the Type Rating Training and competency assessment, they will obtain their rating.

The assessment shall be designed using criteria based on consistency and reliability as stated in the performance objectives listed in the training plans. The procedures shall also include a performance assessment of each ATSEP during a typical set of exercises or simulation.

The duration of the assessment will depend of the complexity of the system/equipment.

The state organisation should abide by the standards of accomplishment described in Chapter 1 and to the general recommendations described in Chapter 2 of this manual.

Documentation

The training course, assessment and competency will be documented and logged for each ATSEP.

Chapter 10

Continuation Training

Introduction

The ICAO State letter AN 7/5-01/52 requests States or Air Traffic Service Providers (ANSP) to provide recurrent training to their ATSEP. In order to meet licensing, competency assessment and international or national safety regulatory requirements, States or ANSP have to provide refresher training to their ATSEP. For example, in Europe, ESARR 5 sets out the general safety requirements for all ATM services' personnel responsible for safety related tasks within the provision of ATM services across the ECAC area. The specific safety requirements for ATSEP, ESARR5, requires that technical and engineering personnel must have and maintain sufficient knowledge and competence.

This chapter is intended to provide guidelines to States and ANSP in the preparation and provision of Continuation Training for Air Traffic Safety Electronic Personnel (ATSEP). The Refresher Training and Emergency Training are two types of recurrent training. Conversion training is an evolutionary training allowing ATSEP to migrate from a specific work area to another one.

In this chapter, Continuation Training is the expression used to describe the following three types of training:

- Refresher training;
- Emergency training;
- Conversion training.

Continuation Training is given to augment existing knowledge and skills and/or to prepare for new technologies.

The objective of continuation training is to ensure that the ATSEP has up-to-date operational knowledge and experience in all required topics. The provision of such training will contribute to the development and maintenance of ATSEP skills, improve the services provided and facilitate the introduction of a competency scheme.

Condition: In a laboratory environment, given exposure to a specific equipment/system along with the appropriate and pertinent training material, reference documentation, test equipment and tools:

Performance: The trainee will be able to perform:

- preventive maintenance;
- corrective maintenance;
- calibration; and
- certification.

Standard of accomplishment: All maintenance should be performed as per the approved standards and procedures.

10.1 Refresher Training

Introduction

Refresher Training is designed to review, reinforce or upgrade existing knowledge and skills, including team skills.

It should ideally be site and/or rating specific, and cover theoretical knowledge, practical skills, and a number of simulations and/or practical exercises. Refresher Training is not meant to be just another type of training, it is complementary and should be done on a regular basis.

Target Audience

ATSEP who hold only a single rating should receive refresher training specific to that rating.

ATSEP who hold ratings for a number of systems or equipment within the same unit could receive specific refresher training for each system/equipment or via a global training course covering all relevant systems/equipment.

In the case of multi-rated ATSEP, (e.g. COM, NavAids, Surveillance, etc.), Refresher Training specific to that rating and/or endorsement is likely to be most effective, however, a generic course to cover a number of ratings could be designed and provided to such ATSEP. Discretion on this matter is left to individual states or ANSP subject to approval by their national regulatory authority.

ATSEP who holds a position of System Monitoring and Control should receive refresher training on every system/equipment under their control, and also on any new operational procedures.

Training Objectives

Refresher Training should be objective based and designed to familiarize the ATSEP on any system/equipment changes or procedure and practice updates that may have occurred since the last training session. It should relate directly to ATSEP tasks and enable the ATSEP to undergo assessment and work on the system/equipment with confidence.

The following items should be taken into account when developing a Refresher Training course.

Items for consideration:

- Updates on reference material from relevant ICAO Annexes/Docs and AIPs;
- New maintenance procedures;
- New calibration procedures;
- New standards and operating procedures;
- Co-ordination procedures;
- New factors affecting system performance;
- System monitoring and control changes
- Dealing with radio EMI;
- Practical routines;
- Performing scheduled maintenance as appropriate.
- Diagnosing faults, making efficient use of special test equipment, tools and devices provided for system maintenance, including built in test facilities.
- Restoring the system to operational service.
- Introduction of new technology;
- New projects;
- New monitoring, calibrating and measuring equipment available for ATSEP;

- Situational awareness;
- Leadership;
- Co-ordination between services;
- Team Resource Management (TRM);
- New operational request;
- Site Visits;
- Human factors;
- Other items that have changed since the ATSEP last received training.

Frequency and Duration

Refresher Training should be made available periodically for all ATSEP. It is recommended that ATSEP receive Refresher Training every two to three years following their type rating training.

A balance needs to be struck between the requirement for Refresher Training and resource demands. The duration of the training will depend on the number of systems or equipment under the responsibility of the ATSEP. The duration is left to individual states but a minimum of one day per system or equipment is considered necessary.

Delivery of Training

Refresher Training may be carried out at either a national training academy, a local training unit, or in the live environment whichever is the most practical. Where possible, it is advantageous that part of the training be carried out on real systems/equipment. (e.g. Spare system, etc.)

10.2 Emergency Training

Training, including training in emergencies, in unusual situations and in degraded systems. Most of this training will be site specific or may make use of incidents or accidents analysis.

With the reliability of new technology, ATSEP could go through lengthy periods without exposure to any critical or emergency situations. While this trend for increased reliability is welcome, it does point out the need to prepare ATSEP to deal with unusual situations that may arise. This will enhance safety.

Consequently the requirement to provide periodic Emergency Training for all ATSEP is necessary to avoid incorrect actions being taken (eg: bad settings, bad calibration, wrong network or systems configuration, etc.), and ensure a timely response to a major failure or emergency situation that could jeopardise Air Traffic Safety.

This training includes:

- emergency situations;
- unusual or critical situations; and
- degraded systems.

Most of this training will be site-specific and can be designed by using real incidents, accidents, and occurrence reports.

Emergency Situations

This training is oriented to a serious, unexpected and often dangerous situation requiring immediate and precise actions. This training is particularly necessary for the System Manager or ATSEP directly involved in the monitoring and reconfiguration of live equipment.

Unusual and Critical Situations

This training is oriented to a set of circumstances that are not commonly experienced.

The essential difference from an emergency situation is that a volatile situation exists and if an appropriate action is not taken, a major failure or emergency situation will result.

This training is most important for ATSEP in charge of System Monitoring and Control. Part of this training should include dialogue with ATCO.

Degraded Systems

This training is oriented towards dealing with unusual situations that are the result of a system malfunction or failure leading to a loss of system redundancy or service elements.

10.3 Conversion Training

This training is designed to provide knowledge and skills appropriate to a change in either the job category (new discipline or new type rating), environment (new maintenance or other procedures) or systems/equipment (system upgrade or change of system, new project).

In practice, conversion training is not a new type of training. Each time an ATSEP changes jobs, needs a new rating, has to deal with new equipment or is involved in new project, he may require new or updated knowledge and skills.

In order to be efficient, the first step is to identify the gap between the actual knowledge and skills of the ATSEP, and the new requirements. The ATSEP will then go through the different steps of training defined in the manual but for only the part necessary to fulfil the gap.

Practical Training and Simulation

ATSEP should be briefed beforehand on what is required in the practical exercises. The number of exercises that can be run during the limited time available may be small and should be well selected in terms of the real needs.

The Training centre or location of training must be well equipped with the necessary materials to ensure the success of the practical exercises.

Competency Assessment

The structure and conduct of the competency assessment, whether carried out in the live environment or on a simulator, or by means of continuous assessment, will be a matter for decision by individual member States/ANSP and their regulatory authorities.

It can be used by States to maintain their ATSEP licensing/certification program.

Documentation

The training course, assessment and competency will be documented and logged for each ATSEP.

Chapter 11

Developmental Training

Introduction

In the course of their careers, ATSEP may occupy positions requiring an additional level of training and specialization.

In this chapter, we address in generic terms the training required for these positions. Normally, the incumbents of such positions are experienced ATSEP and have gone through the phase one and two basic and qualification training. The positions and functions described in this chapter are:

- Technical Flight Inspector;
- System Monitoring and Control (SMC);
- Training Instructor;
- Engineering ATSEP / Installation technologist.

11.1 Technical Flight Inspector

Introduction

ICAO Annex 10 Volume 1 paragraph 2.8 requires states or Air Navigation Service Providers (ANSP) to perform flight tests on aeronautical telecommunications systems. Flight tests are carried out following guidance documentation provided in ICAO DOC 8071. States or ANSP involved in flight test have developed documents, standards and procedures, which meet the requirement of ICAO DOC 8071. Specialized electronic test equipment such as, high precision navigation receivers, sensors, data recorders, computers and signal analyzers are installed in an aircraft for the calibration of radio navigational aids. In most cases the aircraft is used for the sole purpose of flight calibration. The personnel required to maintain and operate the flight calibration equipment are identified as Technical Flight Inspectors and they may come from the ATSEP environment.

The functions of the ATSEP, as a Technical Flight Inspector (TFI), are generally related to the operation of the airborne recording and positioning equipment which include:

- Calibration of radio navigational receivers;
- Operation of computer and data recording equipment;
- Real time data analysis and decision making;
- Preparation and operation of aircraft positioning equipment (theodolite, laser tracker or differential GPS);
- Communications with ground personnel as required;
- Preparation of inspection report.

Training Objective

Every effort should be made to ensure that each student receives the full benefit of the training program thus ensuring a high quality of service delivery during all phases of the flight calibration.

Trainees should perform flight test duties in accordance with standards and procedures approved by the States or ANSP.

Condition:

- Airborne in the real environment, given exposure to specific situation of flight calibration along with the appropriate and pertinent training material and reference documentation.
- Alternatively, use of laboratory simulation or scenarios to enable the realisation of the objective without the need of the actual equipment.
- Given a description of a specific situation relating to flight calibration.

Performance: the TFI ATSEP should be able to:

- Operate all airborne and ground systems/equipment to be used during the flight calibration;
- Analyze and evaluate technical problems related to the radio navigational aid under inspection;
- Provide advice and recommendations to ground personnel with a view to achieve compliance with the applicable standards;
- Understand instrument procedures used in all phases of a flight;
- Describe relative standards and procedures.

Standard of accomplishment:

- All the descriptions should include the essential points of the given situation;
- All work should be performed as per the approved standards and procedures.

Technical Flight Inspector Training Program

This section provides a generic list of subjects to be part of a typical training program. The training program recommended in this section, may not apply to some States or ANSP.

Radio Navigation

All radio navigation described in ICAO Annex 10 Volume 1 should be either a pre-requisite or be included in the training program. The pre-requisite recommended is three years of experience working on radio navigation aids. The radio navigation aids are listed below:

- Instrument landing system (ILS) for aircraft approaches;
- Microwave landing system (MLS) for aircraft approaches;
- VHF omni-directional radio ranges (VOR);
- No-directional radio beacons (NDB);
- UHF distance measuring equipment (DME);
- Direction finders (DF);
- Secondary surveillance radar (SSR);
- VHF/UHF communication systems.

In addition to the qualification training relating to radio navigation aids, the training must also be oriented to the flight inspection parameters to be recorded and then compared to the prescribed tolerance for each system.

The training must therefore cover the following items:

- ILS – Localiser: (course/clearance field strength, clearance, Identification, Degree of modulation, Composite phasing, Modulation degree consistency, course, course structure,

course monitoring alarms, displacement sensitivity, DS monitor alarms, polarisation, clearance at maximum DS, Range...)

- ILS – Glidepath: (course path/below path clearance field strength, below path clearance, Degree of modulation, Modulation degree consistency, course path, course path structure, course path monitoring alarms, displacement sensitivity, DS monitor alarms, polarisation, clearance at maximum DS, Range, ...)
- Markers (Identification, modulation)
- En route facilities DME, VOR: (Degree of modulation, identification, cone of confusion, alignment, structure, field strength, distance accuracy, coverage, ...)
- En-route NDBs. (Identification, Coverage, Signal fluctuation,...)

Type of flight calibration

The TFI should also receive training in order to perform the different types of flight calibration.

- Initial flight calibration, which is performed before the equipment is put into service or before it is put into service following major repairs.
- Routine flight calibration performed after a predetermined flight calibration interval.
- Major flight calibration performed after a predetermined number of flight calibration intervals.
- Special flight calibration performed upon demand, after repairs, interference through external factor or in the event of air accident investigation.

The training should also include the following subjects:

- The flight calibration process (intervals, planning, flight preparation, performance, documentation, follow-up and filing);
- The technical requirement (standards and recommendation specified in ICAO Annex 10 and Doc 8071);
- Duties and responsibilities;
- The flight calibration equipment and stated procedures;
- Planning and performing flight calibrations;
- Analyzing and evaluating the value recorded;
- Compiling and issuing the provisional flight calibration report;
- Compiling and issuing the final flight calibration report with summary conclusions of the values recorded and evaluated;
- The maintenance and surveillance unit;
- Maintenance and operation of the flight calibration equipment;
- Maintenance and operation of the aircraft positioning system (theodolite, laser tracker, DGPS).

11.2 System Monitoring and Control (SMC)

Introduction

The proliferation of CNS and ATM systems/equipment has brought up new ways of providing System Monitoring and Control. Most ANSP have centralized the System Monitoring and Control functions within a geographical area, typically the FIR. Generally, each ACC has a System Monitoring and Control (SMC) suite or position staffed by qualified SMC ATSEP. These ATSEP are responsible for the day to day operation (normally 24 hours/day, 7 days/week) of all operational system/equipment within their FIR. The SMC ATSEP insures a quick response to

malfunctions or failures by diagnosing the problem, activating fall back procedures and initiating the repair. All this necessitates a lot of coordination and the SMC ATSEP is the link between the operational controllers and the operational CNS and ATM ATSEP within a whole FIR. Inter FIR coordination is also done by the SMC ATSEP.

The SMC ATSEP needs appropriate training in order to be competent and to retain this competency. This training must be oriented on performing their job functions relating to CNS/ATM electronic systems and equipment and also including TRM and other HMI and HHI skills.

This training shall be designed to:

- establish qualification standards;
- provide a basis against which student performance will be evaluated; and
- provide the student with a comprehensive description of the Training Plan.
- provide the SMC ATSEP with detailed knowledge of SMC functions and with operational practices and exercises of applied standards and procedures.

A generic list can be used in grouping the principal duties of the SMC ATSEP. Description of site procedures to complete each of the tasks identified in the list. Numbering system to identify the tasks in each of the Areas of Responsibility, following the naming conventions for categorizing as below:

- LR – Logging and Reporting;
- MC – Monitor and control;
- RR – Release and Restoration;
- PI – Problem Isolation and Service Restoration;
- PO – Position Operation;
- SS – Site Specific SMC Tasks.

Training Objective

The SMC Competency Training Program will be developed, implemented and delivered based on the job functions and enhanced by OJT. Every effort shall be made to ensure that each student receives the full benefit of the training program thus insuring confidence in managing the SMC position/function.

Trainees shall perform system monitoring and control duties in accordance with approved procedures and apply TRM, HMI and HHI concepts.

Condition:

- In a SMC environment, given exposure to specific system monitoring and control equipment along with the appropriate and pertinent training material, reference documentation and tools.
- Alternatively, use of simulation or scenario to enable the performance of the objective without the need of the operational equipment.
- Given a description of a specific situation relating to an FIR/ACC.

Performance: On the monitoring and control systems covered in this section, the SMC ATSEP shall be able to:

- Operate all systems and equipment installed at the SMC position;
- Monitor and Control all systems/equipment under his responsibility;
- Describe the relevant airspace;
- Apply the TRM, HMI, HHI skills;
- Describe relative standards and procedures.

Standard of accomplishment:

- All the descriptions should include the essential points of the given situation;
- All work should be performed as per the approved standards and procedures.

SMC ATSEP Competency - Knowledge Requirements

This aspect of the training program addresses the knowledge requirements for ATSEP in order to achieve SMC Competency. The elements of the training program will be derived from the SMC Job Tasks and will address the following subject areas:

a) ANS Structure

- ANS Organization and Operation
- ANSP Maintenance Program
- Airspace/FIR Structure (National; FIR/Inter-FIR) ATC & FSS)
- Systems/Equipment providing ANS Services
- ANSP Administrative practices
- Technical Operations/Air Traffic Control Policies, Procedures, Agreements

b) ANS System/Equipment

- Operational Impacts to End Users/ Customers due to loss / degradation of System/Equipment Services / Evaluation of system performance
- System/Equipment operation (SMC Re-Configuration, Restoration) (monitoring & control)
- User Position Functionality and Operation
- Facilities Support
- Facility Power Distribution Configuration and Operation

c) SMC Tools, Processes and Procedures

- ISO Instructions & Procedures (On-site Quality Control Program)
- Maintenance Agreements with Outside Agencies
- SMC General Processes (NOTAM / Accident / Incident / EMI / ELT)
- MMS/WS/etc. (Operation / Management / Reports / Logs / Database)

d) Technology

- Telecommunication, CNS/ATM Technologies and Principles
- Computer, Data Communications and Networking Principles
- Electromagnetic Interference / Antenna and Cavity Networks / RF Propagation

e) Human Factors

- Effective Communication and Co-ordination Skills (Oral and Written)
- Interpersonal Skills (HHI)
- TRM
- HMI
- Stress management

f) Risk Assessment

SMC ATSEP Competency - Experience Elements

The completion of the tasks listed below will confirm the work experience requirements for SMC Competency. The completion of these tasks is in two stages:

- Skills Development - where the qualified person (OJI) mentors and assists the candidate through each of the tasks; and
- Skills Assessment - where the qualified person (OJI) assesses the candidates ability to perform the task without assistance.

Under the OJM/OJI supervision, the SMC ATSEP shall be able to:

a) SMC Logging / Reporting (LR):

- Demonstrate effective use of Maintenance Management System (MMS);
- Demonstrate SMC accident/incident/unit investigation procedures (Data/Voice Security/Release);
- Demonstrate Significant Outage Report process;
- Demonstrate use of local SMC Operations Manual / ISO Work Instructions.

b) System Monitoring / Control (MC):

- Demonstrate effective use of Monitoring/Control tools (WS, MCP's, System/Equipment panels, etc.);
- Demonstrate ability to gather User Complaint Data.

c) Co-ordinate Release and Restoration (RR) Procedures (System and/or Equipment):

- Demonstrate ability to effectively prioritize multiple tasks in each of the following areas:
 - CNS System/Equipment;
 - ATM System/Equipment;
 - Facility;
 - Telecommunications;
 - External Agencies.
- Demonstrate ability to issue various types of NOTAM's.

(d) Problem Isolation (PI) and Service Restoration:

- Describe problem (correlation/interpretation of Systems error messages and user complaints);
- Demonstrate use of Tools/Test equipment used in SMC problem isolation;
- Describe operational impact to users (internal and external);
- Demonstrate SMC System/Equipment re-configuration/reload activities;
- Verify service restoration in each of the following areas:
 - CNS System/Equipment;
 - ATM System/Equipment;
 - Facility;
 - Telecommunications;
 - External Agencies.

(e) Position Operation(PO) (Routine / Key Operate Tasks):

- Communications System;
- Situation Display System;
- Flight Data Processing System;
- Information System.

(f) Execution of Site-Specific (SS) TOC Tasks:

- Fire Warden Procedures;
- Maintenance Support Function;
- Technical Advisory.

11.3 ATSEP Instructor Training

Introduction

ATSEP training is covered in detail in this document. ATSEP training is specialized and usually not available in conventional public training institutes. Therefore a requirement arises to train ATSEP in becoming ATSEP instructors. This chapter provides the type of training the instructor must complete in order to learn how to teach in a classroom and how to provide On the Job Training and coaching on equipment.

11.3.1 Classroom instructional techniques

This course is designed for Air Traffic Safety Electronic Personnel who are, or will be, involved in classroom instruction. Each instructor should have special training in the form of a practical course which aims to provide the basic instructional skills necessary for the efficient conduct of classroom training.

In a classroom simulation and a modern interactive training environment, the future instructor has to follow specific guidelines to plan, prepare and deliver presentations and lessons. During the course, they will play alternatively the role of instructor and class participant. Their performance as an instructor is subsequently assessed.

The programme should include:

- Quality of a good instructor;
- Principle of adult learning;

- Use and structure of a lecture;
- How to design and structure a lesson, lesson plan;
- Questioning techniques;
- Elements and formulation of training objectives;
- Use of teaching aids;
- Principle of student motivation;
- Qualities and types of written tests;
- Practical exercises where the participants present one lecture and one lesson.

11.3.2 OJT and Coaching Training

The course is designed for ATSEP who are already, or will be, carrying out on-the-job training or coaching at a technical unit. The on the job training phase and practical exercises on equipment (standby or real equipment or special equipment for development and training purpose) is well recognised as critical in the training of an ATSEP. It is necessary to give the instructor a series of teaching techniques and coaching practices which, if adopted, will increase the quality and the efficiency of the OJT and will also increase the safety and decrease risk when dealing with equipment. The course should provide appropriate training for those involved in coaching and practical training on equipment, suggesting the appropriate means of carrying out this training. It should also provide and recommend a code of practise for the instructor.

The programme should include:

- Safety precautions to take before teaching practical training on equipment;
- Learning processes, cognitive aspects and motivation theories;
- Effective verbal communication, non verbal communication and effective listening skills;
- Personal interactions, personal styles and attitudes, building positive relationships, the influence of recognition, interpersonal conflict;
- Training practices such as briefing a student, monitoring the student's progress, intervention methods, feedback and debriefing;
- Task training, how to built practical exercises and sessions dealing directly with equipment, measurement technique, etc.;
- Progressive application of coaching theory with feedback;
- Stress recognition and stress management.

11.3.3 Assessment Training

This course is designed for experienced engineers, technologists and OJT instructors who will be required to act as a competency assessor.

The assessor should follow a course which focuses on procedures for evaluating the initial and continued operational competency of Air traffic Safety Electronic Personnel.

The task of assessor is recognised as being a difficult task and essential to ensuring that competency standards are maintained. It is essential to safety. Furthermore assessors may have to comment and take action on the competency of colleagues, ATSEP and friends. This is not a task that everybody is capable of doing and involves professional and personal criteria.

This particular course should endorse the use of both practical and oral assessment as a process to determine operational competency and aims to provide its participants with the rationale, initial knowledge and techniques for the role of competency assessor. Such a course

should help the assessor fulfil their job, but also administration to establish the required infrastructure in order to meet the regulatory requirements.

Program outline:

- Role and task of assessor;
- International Safety Regulatory Requirement;
- Concept of assessment;
- Human factors affecting assessment;
- The oral part of the assessment and the scenario of interview;
- The practical part of the assessment process and work on equipment;
- Assessment for competency;
- Maintenance of competency;
- Competency assessment debriefing;
- Exercises in practical and oral assessment.

11.4 Engineering ATSEP - Installation Technologist

Introduction

Most states have regulatory requirements for insuring that CNS/ATM systems/equipment are installed by qualified ATSEP. Generally, ANSP create a distinct group of specialized ATSEP who are responsible for the engineering and the installation of all CNS/ATM systems/equipment.

Training Objective

This session provides generic objectives for training of Engineering /Installation ATSEP. This training program will be developed, implemented and delivered in compliance with ATSEP job functions.

The students shall perform their duties in accordance with approved standards and procedures.

Condition:

- In a laboratory environment, given exposure to specific systems/equipment along with the appropriate and pertinent training material, reference documentation and tools.
- Alternatively, use of simulation or scenario to enable the performance of the objective without the need of the real equipment.
- Given a description of a specific system installation.

Performance:

On a given situation, the engineering/installation ATSEP shall be able to:

- Demonstrate installation dexterity;
- Design installation drawings;
- Apply the TRM skills;
- Perform on the job duties.

Standard of accomplishment:

- All the descriptions should include the essential points of the given situation;
- All work should be performed as per the approved standards and procedures.

The typical training package for Engineering/Installation ATSEP:

- a) With references, the participant will describe the functions in ANSP operations and responsibilities:
 - Describe the relationship between the ANSP and the Regulator;
 - Describe the purpose of the regulations;
 - Describe the importance of engineering standards and procedures;
 - Describe the Life Cycle Management principles;
 - Describe ATM & CNS specialties;
 - Describe Design and Implementation specialties;
 - Describe the various phases of an installation project.
- b) With references, the participant will prepare for installation activities:
 - Describe ESD and safety standards;
 - Explain the drawing system;
 - Gather installation documents;
 - Interpret documentation;
 - Procure installation materials;
 - Describe how to configure installation items.
- c) With references, the participant will assemble PCBs and Panels:
 - Assemble PCBs;
 - Fabricate panels and interface panels;
 - Assemble panels.
- d) With references, the participant will prepare power and ground cables:
 - Describe power systems and cables;
 - Assemble Power cords for equipment racks;
 - Assemble Ground cables;
 - Prepare Exothermic Welded ground connection (Outdoor demonstration).
- e) With references, the participant will prepare RF cables and components:
 - Describe RF cables and systems;
 - Prepare RF cables for testing and installation;
 - Prepare tuned resonant cavities for installation;
 - Describe how to prepare RF Cable to Specified Electrical Length.
- f) With references, the participant will terminate control cables:
 - Describe Control cables and systems;
 - Terminate 25 pair control cables with Amp and TRW;
 - Terminate 25 pair control cables with BIX;
 - Terminate ribbon cables;

- Terminate Cat 5 cables;
 - Terminate fiber optic cables;
 - Terminate cross connect wiring using Wire Wrap;
 - Verify control cable connections.
- g) With references, the participant will prefabricate racks:
- Plan Equipment rack;
 - Assemble rack;
 - Install Equipment into Rack (Mechanical Assembly);
 - Install Equipment cables into racks (Electrical Assembly).
- h) With references, the participant will install cross connections:
- Plan cross connections;
 - Install cross connect wiring.
- i) With references, the participant will describe the workshop to site transition processes:
- Describe the pre-POP tests;
 - Describe the implementation review process;
 - Prepare equipment and/or shelter for shipping.
- j) With references, the participant will install equipment racks:
- Install racks into shelter;
 - Install ladder tray and conduits.
- k) With references, the participant will install system interconnects and interfaces:
- Install power and ground systems;
 - Install interconnect wiring;
 - Install RF System;
 - Install Fire stopping.
- l) With references, the participant will complete documentation requirements:
- Describe post project activities;
 - Track inventory.
- m) With references, the participants will restore site:
- Remove all cables from racks, ladder trays, and conduits;
 - Pack all equipment from racks;
 - Remove racks, ladder trays, and conduits;
 - Clean up site.

Appendix A

Action Verbs

Definition of Verbs – Level 0

Level 0: Requires from the trainee a simple level of awareness.

Verb	Definition	Example	L
			(L = Level)
Familiarise	To become acquainted with a subject	Familiarisation with technical and operational ATM facilities.	0
To be aware of	Condition of being conscious, level of awareness	To be aware of potential hazards to health and safety generated by navigation equipment	0

Appendix A

Definition of Verbs – Level 1

Level 1: Requires a basic knowledge of the subject. It is the ability to remember essential points; the trainee is expected to memorise data and to retrieve it.

Verb	Definition	Example	L
(L = Level)			
Define	State what it is and what its limits are; state the definition	Define the global performances for CVOR and DVOR	1
Draw	Produce a picture, pattern or diagram	Draw the block diagram of the transmitter	1
List	Say one after the other	List the main SW dev processes used in industries	1
Name	Give name of objects or procedures	Name who is designated to authorise changes in operational data	1
Quote	Repeat of what is written or said to underline	Quote ICAO definition of ATC service	1
Recognise	To know what it is because you've seen it before	Recognise on a diagram all the elements of the ADS	1
State	Say or write in a formal or definite way	State who are the local telecom providers and the service characteristics	1

Appendix A

Definition of Verbs – Level 2

Level 2: Requires an understanding of the subject sufficient to enable the student to discuss intelligently. The individual is able to represent for himself or herself certain objects and events in order to act upon these objects and events.

Verb	Definition	Example	L
(L = Level)			
Characterise	To describe the quality of features in something	Characterise consequences of an OS Upgrade	2
Consider	To think carefully about it	Consider institutional issues and service provider responsibilities	2
Demonstrate	Describe and explain; logically or mathematically proves the truth of a statement	Demonstrate the possible use of GBAS for approach and landing	2
Describe	Say what it is like or what happened	Describe the architecture of the ATN network	2
Differentiate	Show the differences between things	Differentiate on a diagram all the possible elements of the ADS C system	2
Explain	Give details about something or describe so that it can be understood	Explain the principles of non blocking switches	2
Take account of	Take into consideration before deciding	Take wind influence into account when calculating a ground speed	2

Appendix A

Definition of Verbs – Level 3

Level 3: Requires a thorough knowledge of the subject and the ability to apply it with accuracy. The student should be able to make use of his/her repertoire of knowledge to develop plans and activate them.

Verb	Definition	Example	L
(L = Level)			
Act	Carry out, execute		3
Apply	Use something in a situation or activity	Apply the appropriate model to the analysis of a relevant aviation system	3
Appreciate	To understand a situation and know what is involved in a problem-solving situation, to state a plan without applying it	Appreciate criticality of the conditions	3
Assist	Help somebody to do a job by doing part of it	Handle the operational HMI and assist in the tuning of the screens	3
Calculate	To discover from information you already have by arithmetic; to think about a possible cause of action in order to form an opinion or decide what to do	Calculate the values of the elements of a simple generic antenna system	3
Check	Make sure the information is correct (satisfactory)	Check the operational status of the monitor system	3
Choose	Select out of number, decide to do one thing rather than another	Choose the appropriate type of line for a given specific application	3
Collect	Assemble, accumulate, bring or come together		3
Conduct	Lead, guide	Conduct co-ordination	3

Appendix A

Definition of Verbs – Level 3 (continued)

Verb	Definition	Example	L
(L = Level)			
Confirm	Establish more firmly, corroborate	Confirm sequence order	3
Decode	Turn into ordinary writing, decipher	Decode a transponder message	3
Encode	Put into code or cipher		3
Estimate	Form an approximate judgement of a number; Form an opinion	Being given an aircraft route, estimate thanks to a software package or/and GPS receiver the availability of the constellation	3
Execute	Perform action		3
Extract	Copy out, make extracts from, find, deduce	Extract data from a flight plan	3
Identify	Associate oneself inseparably with, establish the identity	Identify and locate data transmission problems	3
Inform	Inspire, tell	Inform the planning controller	3
Initiate	Begin, set going, originate	Initiate a co-ordination procedure	3
Input	Enter in the system	Input data	3
Issue	Send forth, publish	Issue ATC clearance	3
Maintain	Carry on, keep up, refresh	Maintain flight data display	3
Measure	Ascertain extent or quality of (thing) by comparison with fixed unit or with object of know size	Measure the typical parameters of lines	3

Appendix A

Definition of Verbs – Level 3 (continued)

Verb	Definition	Example	L
(L = Level)			
Monitor	Keep under observation	Monitor traffic	3
Notify	Make known, announce, report	Notify runway in use	3
Obtain	Acquire easily, without research	Obtain aeronautical information	3
Operate	Conduct work on equipment	Operate test tools to analyse the system	3
Pass	Move, cause to go, transmit	Pass essential traffic information without delay	3
Perform	Carry into effect, go through, execute	Perform typical measurements on a receiver	3
Record	Register, set down for remembrance or reference	Record information by writing effectively	3
Relay	Arrange in, provide with, replace by....	Relay pilot message	3
Respond	Make answer, perform answering or corresponding action	Respond to the loss of aircraft radar identification	3
Scan	Look intently at all parts successively	Scan data display	3
Transfer	Hand over	Transfer information to receiving controller	3
Update	Refresh, make up to date	Update	3
Use	Employ for a purpose, handle as instrument, put into operation	Use the ICAO documentation to explain the principles related to signals in space	3
Verify	Establish truth of	Verify the impact of the requirements on the location and the type of the ground station	3

Appendix A

Definition of Verbs – level 4

Level 4: Ability to establish a line, within a unit of known applications, following the correct chronology, and the adequate methods to resolve a problem situation. This involves the integration of known applications in a familiar situation.

Verb	Definition	Example	L
(L = Level)			
Acquire	Gain by oneself and for oneself; Obtain after research	Acquire relevant aeronautical information	4
Adjust	Change to a new position, value or setting	Adjust antenna system	4
Allocate	Assign, devote	Allocate the responsibility of separation during transfer	4
Analyse	Examine minutely the constitution of	Analyse the coverage of the radio system	4
Assign	Allot as a share, make over	Assign take off number	4
Co-ordinate	Bring part into proper relation	Co-ordinate with RCC	4
Comply	Act in accordance with	Comply with rules	4
Delegate	Commit authority to somebody	Delegate separation in case of aircraft continuing visually	4
Design	Conceive mental plans for	Design a NDB station according to operational requirements	4
Detect	Discover existence of	Detect disturbances	4
Ensure	Make safe, make certain	Ensure the agreed course of action in carried out	4

Appendix A

Definition of Verbs – Level 4 (continued)

Verb	Definition	Example	L
(L = Level)			
Expedite	Assist the progress of, do speedily		4
Integrate	Combine into a whole, complete by addition of parts	Integrate adequately components into a LAN	4
Justify	Show the rightness of a choice or of an option	Justify and theorise the DME/N versus the DME/P	4
Manage	Handle, wield, conduct	Manage aerodrome surface movements	4
Organise	Give orderly structure to, frame and put into working order	Organise arrival sequence	4
Predict	Forecast	Predict evolution of a conflict situation	4
Provide	Supply, furnish	Provide separation	4
Relate	Establish link with	Relate a pressure setting to an altitude	4

Appendix A

Definition of Verbs – Level 5

Level 5: Ability to analyse new situation, in order to elaborate and apply one or other relevant strategy, to solve a complex problem. The defining feature is that the situation is qualitatively different to those previously met, requiring judgement and evaluation of options.

Verb	Definition	Example	L
(L = Level)			
Appraise	Estimate, determine the benefit	Appraise the interest of a traffic management option	5
Assess	Estimate value or difficulty, evaluate	Assess flight inspection results	5
Balance	Weigh (a question, two arguments, etc, against each other)	Balance two control actions	5
Calibrate	Correct and adjust to enable the provision of accurate data	Calibrate the NDB system according to flight inspection	5
Discuss	Investigate by reasoning or argument	Discuss the distribution of integrity information through GALILEO	5
Evaluate	Ascertain amount of, find numerical expression for	Evaluate workload	5
Extemporise	Produce without preparation, improvise	Extemporise phraseology in abnormal situations	5
Imagine	Form mental image of, conceive	Imagine possible actions to cope with unusual situations	5
Interpret	To decide on something's meaning or significance when there is a choice	Interpret fault report based on various test tool measures	5
Resolve	Solve, clear up, settle	Resolve conflict	5

Appendix A

Definition of Verbs – Level 5 (continued)

Verb	Definition	Example	L
(L = Level)			
Review	Survey, look back on	Review previous clearance according to the latest aircraft relative positions	5
Select	Pick out as best or most suitable	Select the runway in use	5
Solve	Find answer to	Solve separation problems	5
Theorise	Extract general principles from a particular experience	Theorise the principles of ILS	5
Troubleshoot	Trace and correct faults	Troubleshoot wrong bearing indications of a VOR	5
Validate	Make valid, ratify, confirm	Validate one radar vectoring option to expedite the traffic	5

Appendix A

Skill	Examples
<p>Intellectual Skills</p> <p style="padding-left: 40px;">Classifying</p> <p style="padding-left: 40px;">Rule-using</p> <p style="padding-left: 40px;">Discriminating</p> <p style="padding-left: 40px;">Problem-solving</p>	<p>Distinguishes between average flight distance and average stage length.</p> <p>Identifies different classes of aircraft.</p> <p>Defines the concept of insurance.</p> <p>Determines expected approach times for aircraft in an approach sequence.</p> <p>Generates a weather forecast.</p> <p>Decides whether or not a fire is completely extinguished.</p> <p>Judges whether an aircraft cabin has been adequately cleaned.</p> <p>Diagnoses an equipment fault.</p>
<p>Physical (Motor) Skills</p>	<p>Manipulates a fire hose.</p> <p>Operates a computer keyboard.</p>

Glossary

MXI	Multi-system extension Interface
N/A	Not Applicable
NADIN II	National Airspace Data Interchange Network II
NAV	Navigation
NAVAID	Navigation(al) Aid
NB	Narrow Band
ND	Navigation Display, Network Digit
NDB	Non Directional Beacon
NEAN	North European ADS-B Network
N-ISDN	Narrow and Integrated Services Digital Network
NM	Nautical Mile(s)
NOTAM	Notice to Airmen
NP	Network Packet
NPR	Noise Preferential Route
NSUP	Network Supervision
OBI	On Board Indicator
OJI	On-The-Job Instructor
OJM	On-The-Job Mentor
OJT	On-The-Job-Training
OLDI	On-Line Data Interchange
OLSS	Operational Logistic Support Summary
OM	Outer Marker
OOA	Object Oriented Analysis
OODBMS	Object-Oriented Database Management System
OOP	Object Oriented Programming
OP	Operational
ORCAM	Originating Region Code Assignment Method
OS	Operating System
OSA	Open Systems Architecture
OSE	Open System Environment
OSF	Open Software Foundation
OSI	Open System Interconnection
OTM	Overall Transaction Manager
PABX	Private Automatic Branch Exchange
PAC	Pre-Activation Message
PACM	Pulse Amplitude Code Modulation
PAN	Procedure for Air Navigation
PANS	Procedures for Air Navigation Services
PAPI	Precision Approach Path Indicator
PAPIS	Precision Approach Path Indicator System
PAR	Precision Approach Radar
PAT	Performance Acceptance Test
PC	Personal Computer
P/CA	Price/Cost Analyst
PCM	Pulse Code Modulation
PCU	Power Control Unit
PCM	Pulse Code Modulation
PD WRT	Probability of Detection. With Respect To

Appendix B

Glossary

PFD	Planned Flight Data
PFD	Probability of Failure
PFD	Primary Flight Display
PHARE	Program for Harmonised ATC Research in Europe
PLN	Flight Plan
PM	Phase Modulation
PM	Preventive Maintenance
POP	Proof of Performance
POSIX	Portable Operating System Interface (IEEE)
PPI	Plan Position Indicator
PPS	Pulses Per Second
PRF	Pulse Repetition Frequency
P-RNAV	Precision Area Navigation
PSD	Phase Sensitive Detector
PSR	Primary Surveillance Radar
PTE	POEMS Test Environment
PTT	Post, Telephone and Telegraph
QFE	Pressure at the airport
QFF	Corresponding pressure at sea level
QNE	Pressure at any level higher than sea level
QNH	Pressure reduced to mean sea level
QS	Quality of Service
QSIG	Symmetrical adaptation of N-ISDN signaling
RA	Resolution Advisory
RABM	Range/Azimuth Beacon Monitor
RAD	Radar
RADAR	Radio Detection and Ranging
RADNET	Radar Network (Benelux-Germany)
RAIM	Receiver Autonomous Integrity Monitoring
RAM	Random Access Memory
RCA	Remote Client Access
RCC	Rescue Co-ordination Centre
RCMS	Remote Control & Monitoring System
RCP	Required Communication Performances
RCS	Radar Cross Section
RCVR	Receiver
RDB	Relational Database
RDH	Reference Datum Height (for ILS)
RDO	Radio
RDP	Radar Data Processing
RDPS	Radar Data Processing System
RDQC	Radar Data Quality Control
REC	Receive or Receiver
RES	Radar Environment Simulator
RF	Radio Frequency, Radius to a Fix (ARINC 424 Path Terminator)
RF/IF	Radius to a Fix (ARINC 424 Path Terminator)
RGP	Required Global Performances
RISC	Reduced Instruction Set Computer
RMCD E	Radar Message Conversion and Distribution Equipment

Appendix B

Glossary

RMI	Radio Magnetic Indicator
RMS	Root Mean Square
RNAV	Area Navigation
RNG	Radio Range
RNP	Required Navigation Performance
RPL	Repetitive Flight Plan
RPM	Radar Performance Monitor
RPS	Radar Position Symbol
RSL	Receiver Side Lobe suppression
RSLs	Receiver Side Lobe Suppression
RSP	Required Surveillance Performance
RSR	En-route Surveillance Radar
RT	Receive/Transmitter
RTCA	Radio Technical Committee on Aeronautics
RTF	Radiotelephone or Radiotelephony
RUP	Rational Unified Process
RVR	Runway Visual Range
RVSM	Reduced Vertical Separation Minimum
RWARN	Regional Wide Area Radar Networks
RX	Receiver Station
SA	Selective Availability
SADIS	Satellite Distribution of World Area Forecast system
SARPS	Standards and Recommended Practices (ICAO)
SASS	Surveillance Analysis Support System
SASS-C	Surveillance Analysis Support System - Centre
SASS-S	Surveillance Analysis Support System - Sensor
SAT	Site Acceptance Test
SATCOM	Satellite Communications
SBAS	Space/Satellite Based Augmentation system
SCSI	Small Computer System Interface
SDD	Synthetic Data Display
SDE	Senior Director, Principal EATMP Directorate or, in short, Senior Director(ate) EATMP (EUROCONTROL Headquarters)
SDLC	Synchronous Data Link Control
SDM	System Definition Manual
SDPS	Surveillance Data Processing System (ICAO)
SELCAL	Selective Calling System
SEP	Spherical Error Probable
SGML	Standard Generalised Markup Language
SHF	Super High Frequency
SID	Standard Instrument Departure (Route)
SIGMET	Significant Meteorological Information
SIS	Signal In Space
SITA	Société Internationale de Télécommunications Aéronautiques (F)
SKA	Skill, Knowledge and Attitude
SLOC	Source Lines of Code
SLS	Side Lob Suppression
SMC	System Monitoring and Control
SMC	System Monitoring and Computer/Control
SMGCS	Surface Movement Guidance and Control System

Appendix B

Glossary

SMR	Surface Movement Radar
S/N	Signal to Noise Ratio
SNMP	Simple Network Management Protocol
SNR	Signal-to-Noise Ratio
SPI	Special Position Indicator
SSR	Software Specification Review
SSR	Solid State Relay
STCAS	Short Term Conflict Alert System
SPI	Special Pulse (Position) Identification (SSR)
SPI	Special Position Indicator
SRA	Surveillance Radar Approach
SRAM	Safety Regulation Commission (EUROCONTROL)
SRE	Surveillance Radar Element of Precision Approach Radar System
SRG	Safety Regulation Group
SRU	Safety Regulation Unit
SSA	System Safety Assessment
SSB	Single Sideband
SSR	Secondary Surveillance Radar
ST	Specialist Task (EATCHIP)
STC	Sensitivity Time Control
STCA	Short Term Conflict Alert
STD	Standard (EATCHIP/EATMP)
STDMA	Self-organizing Time Division Multiple Access
SUR	Surveillance
SURV	Surveillance
SW	Software
SWC	Significant Weather Chart (also TEMSI)
SWR	Standing waves Ratio
TA	Traffic Advisory
TACAN	UHF Tactical Air Navigation Aid
TAF	Terminal Area Forecast
TCAS	Traffic Alert and Collision Avoidance System
TCAS	Transponder Collision Avoidance System
TCB	Trusted Computing Base
TCL	Terminal Control
TCP	Transmission Control Protocol
TCP/IP	Transmission Control Protocol/Internet Protocol
TDG	Training Development guideline
TDH Unit	Training Development and Harmonization Unit (EUROCONTROL, IANS)
TDM	Time Division Multiplex
TEMSI	Significant Weather Chart (mostly for Europe)
TFCCC	Task Force Common Core Content (EATCHIP, HUM, HRT, TSG)
TFI	Technical Flight Inspector
TL	Transition Level
TLS	Target Level of Safety
TMA	Terminal Area
TMG	Training Management Guideline
TOS	Taux d'Onde Stationnaire
TRM	Team Resource Management
TRSB	Time Reference Scanning Beam

Appendix B

Glossary

TSG	Training Sub-Group (EATCHIP/EATMP, HUM, HRT)
TSP	Training Sub-Programme (EATMP, HUM, HRS)
TSRB	Time Reference Scanning Beam
TTTTF	Time To First Fix
TVOR	Terminal VOR
TWR	Tower
TX	Transmitter
UAC	Upper Area Control Centre
UAT	Universal Access Transceiver
UBSS	Unix Basic System Software
UDF	UHF Direction Finding Station
UHF	Ultra High Frequency (300 to 3 000 Mhz)
UIR	Upper Flight Information Region
UML	Unified Modeling Language
UPS	Uninterrupted Power Supply
USB	Upper Sideband
UTC	Universal Time co-ordinate
VASI	Visual Approach Slope Indicator
VASIS	Visual Approach Slope Indicator System
VCS	Voice Communication Switching
VCS	Voice Communication System
VCSS	Voice Communication Switching System
VDF	VHF Direction Finding Station
VDL	VHF Digital/Data Link
VDL4	VHF Self-organising TDMA (STDMA) Data Link Mode 4
VFR	Visual Flight Rules
VHF	Very High Frequency (30 to 300 Mhz)
VHSIC	Very High Speed Integrated Circuit
VIS	Visual aids
VLF	Very Low Frequency
VOLMET	Meteorological Information for Aircraft in Flight
VOR	VHF Omni-directional Radio Range
VORTAC	VOR and TACAN combination
VOT	VOR Airborne Equipment Test Facility
VSCS	Voice Switching and Control System
WAAS	Wide Area Augmentation System * (USA)
WAN	Wide Area Network
WAP	Wireless Access Protocol
WGATMTS	Working Group ATM Technical Staff (Eurocontrol)
WGS	World Geodetic System
WGS84	World Geodetic Standard 1984
WGS84	World Global system 84
WRT	With Respect To
X.25	Packet Switched Data Network
X25	Packet Switched Data Network Protocol
